"Am in the market for bids on one operation for appendicitis. One-, two-, or five-inch incision—with or without ether—also with or without nurse. If appendix is found sound, want quotations to include putting same back in place and canceling order. If removed, successful bidder is expected to hold incision open for about sixty days, as I expect to be in the market for an operation for gallstones at that time and want to save the extra cost of cutting."

Experienced

Lady—Could I see the captain?

First Mate—He's forward, Miss.

Lady Passenger—I'm not afraid. I've been out with college boys.

Customer—Do you serve lobsters here?

Waiter—We serve anybody; sit down.

Yes, of Course

Stranger (at gate)—Is your mother at home?

Youngster—Say, do you suppose I am mowing this backyard because the grass is long?

One Kind of Economy

"Tommy, isn't it rather extravagant to eat both butter and jam on your bread at the same time?"

"Oh, no, mother. It's economy. You see the same piece of bread does for both."—The Progressive Grocer.

Banking in the Car

"Since I bought a car I don't have to walk to the bank to make my deposits."

"Ah, you ride there now?"

"No, I don't make any deposit."

Not Far Away

Customer—I would like to see some cheap skates.

Saleslady—Just a moment and I'll point out the two floorwalkers.—Automotive Advertising.

No Regrets

Aunt Mary—When I was your age I didn't carry on with the boys the way you do.

"Well, Aunty, you didn't miss much!"—Life.

They'd Had Guests Before

"Mother," asked little Benny, when they had guests for dinner, "will the dessert hurt me, or is there enough to go around?"

The first sandwich was said to have been made in the seventeenth century. Replicas of the original are exhibited in glass cases at all railway stations.—DeLaval Monthly.

The difference between a cow chewing her cud and a flapper chewing her gum is that a cow always looks as if she were thinking.

"To think," exclaimed the enthusiastic husband, "that by the time we get all this furniture paid for we shall have genuine antiques."

County News and Comment

Bradford County, Pa.—Spring was slow in coming but is here at last. April was for the most part a bright, clear month. The past week has been wet and rainy. Some have finished sowing oats. Not much wheat sown in the county last fall on account of the wet weather but what was sown came thru the winter fairly well. Grass is starting up nicely. Pastures are poor but many who are short on hay have turned their cattle out. Hay is rather scarce yet lower in price than a year ago. Dirt roads were worse this spring than for several years. Many western horses have been shipped into the county and sold to the farmers. Not as many farm sales as some years. Prices have been fairly good. Good cows are cheaper this spring. The herd of registered Ayrshire cattle owned by the late Robert Templeton, of Ulster, was sold the past week at dispersal sale to settle the estate. This herd has been in existence for forty-five years and was one of the first accredited herds in the county. About twenty cows and fifteen head of young stock averaged $100. Potatoes, 75c@$1; apples, 75c@$1; eggs, 20c; butter, 45c; hogs, $10 cwt.; hay, baled, $15.—R. D. C., May 2.

Chester County, Pa.—Owing to the extreme cold weather and recent rains farmers are not up to usual schedule in planting. Oats and potatoes are being planted and with another fair week will be about finished. Owing to the severe winter on alfalfa more oats are being planted to take care of the hay shortage. There will also be an increased acreage of potatoes caused by the past two seasons high prices. Many farmers plowed their corn ground early so with fair weather much of the corn should be planted between May 15 and 20th. Some soy beans will also be sown for hay as alfalfa is practically gone and clovers are very poor in many places. Regardless of the low prices of fruit the past winter the fruit men are planning their spray work.—F. H. G., May 2.

Fulton County, Pa.—We are having a very cold, wet month, very little corn ground plowed yet. A severe electrical storm did much damage on 21st. Peach and cherry buds were almost all killed by the freeze on 24th. Apples came thru much better. Large numbers of baby chicks are being delivered to poultry raisers. Cows, horses and hogs are selling well. Oats are sown but not up yet. A few early potatoes have been planted. Gardens are beginning to start.—T. H. T., April 29.

Jefferson County, Pa.—A large percentage of the plowing was done in March. The second week in April was fine and most of the spring wheat was sown, some oats, too, and a few early potatoes were planted. Beginning with the 19th we have had hard cold rains with sleet and snow and very hard freezing several nights. Fruit has been damaged to some extent. Winter wheat and meadows are growing tho it is cold. New seeding is much better than last year. The little pig crop seems to be normal. A large number of orders is being booked by the Berkshire Association of the county. Roads are in bad condition. A lot of new road building is being done. Many more chicks are being bought this season than ever before. Prices: butter, 45@50c; eggs, 20c; potatoes, $1.25; wheat, $1.40; oats, 50c; hay, $18@20; straw, $12@14. Mill feed high locally.—F. A. M., April 27.

Frederick County, Md.—April was a wet and cold month following a warm March. Several heavy frosts the past two weeks are reported to have practically ruined the early apple and peach crop. Grass is looking good, also the grain, but both need warmer weather and more sun. Some oats and early potatoes are planted. But little corn ground is plowed in this section, no fall plowing done last fall due to the wet weather. An unusually large oats crop will be planted if weather permits as many farmers were unable to get any corn ground seeded with clover last fall. Cow testing in this county is on in earnest. Eggs, 22c; chickens, young, 30@40c; potatoes high; hogs, 9½@10c, live weight; hay around $18; corn, $1.—R. J. W., May 2.

Lawrence County, Pa.—Weather during the early part of month was unusually warm. Buds were swelling and grass growing but Nature got a set-back,—cloudy wet weather with several hard freezes, solid ice on standing water, pie plant and asparagus frozen down in several localities. A systematic endeavor to exterminate the corn borer has been going on thruout the month. Side roads are being worked. Those who do extensive fruit growing have fears that the late freezing has killed the buds and blossoms. Others contend that we may have a partial crop at least. Old hay plentiful and slow sale. Good butter, 53@55c; eggs, 25@30c; live poultry scarce.—M. L. V., April 29.

Montgomery County, Pa.—Most of the oats sown. The acreage will be much larger due to the fact that some farmers did not get any wheat sowed last fall. Some plowing has been done for corn. The middle of the month was exceedingly warm for April but we are now having rainy and cool weather. Peach and plum blossoms are out and it is a question whether they were killed by the frosts of the past week. Dairy cows are still in strong demand and selling high. Prices: wheat, $1.30; corn, 80c; oats, 70c; eggs, 25c; chickens, 25c; broilers, 40c; old potatoes, $1.25. New potatoes are being shipped in. Many farmers are starting in raising potatoes on a large scale.—C. N. D., April 30.

Susquehanna County, Pa.—Very hard frosts the last week. A few farmers with high, dry ground have oats sown. Very few gardens or early potatoes planted. Peony beds look promising as well as rhubarb. Hard freezing doesn't seem to harm them very much. Pastures are beginning to look green. A few young cattle turned out but milking cows require hay as well as grain for some time in order to keep up the milk supply. Hay is scarce and very high in price. Fruit blossoms not matured enough to be affected by the heavy frosts. Roads nearly all worked and in fairly good shape. As our supervisors have several road drags or hones we look for good roads this summer. Schools are closing. Lambs not doing very good. Sheep losing their wool. Fresh cows bringing $150 to $175. Pigs very scarce and high. Eggs, 26c; butter, 50c.—J. A. G., May 3.

Warren County, N. J.—Ground has been frozen hard 18 mornings so far. We are having a generous amount of rain and it is quite warm. Grass and grain very short. Pears, plums and cherries are in blossom and look promising. Apples show little bloom, light crop expected. A little oats has been planted and some sod turned for corn. A few potatoes have been planted. Potato acreage will be increased about 15 per cent. Sucking pigs are selling for $6@7 each; wheat, $1.25; oats, 55c; rye, 90c; corn, $18 ton; butter, 55c; eggs, 28c; veal calves, 13c.—A. S. P., April 27.

Wyoming County, Pa.—Not many public sales held in the county this spring. Most farms operated by owners. At a sale the other day there were more than 100 autos and rigs present. The Ladies' Aid served dinner and showed a profit of between $40 and $50 for their work. Buying was very active and the equipment brought all it was worth. Potatoes sold for $1.45 to $1.55 a bushel. The cattle, grade Holstein but untested, ranged from $40 to $110. Among the farmers the main development is the construction of new brooder houses. Peach crop practically all frozen out this year; also some injury to the apple blossoms but not possible to tell how serious at the present time. Farmers are sowing oats at present. Eggs, 25c; 3.5 per cent milk, $2.60; pigs, 5 weeks old, $6; butter, 55c.—J. J. J., May 2.

It was a wise old southern deacon who advised with a chuckle: "Keep yo'r tempah, son. Doan yo' quarrel with no angry pusson. A soft answeh's alus best. Hit's commanded, an' furdemo' hit makes 'em maddah'n anything else yo' could say."

Dr. Jacob Lipman, of the New Jersey Agricultural Experiment Station, says the chemical properties of the land on which a man dwells are the cause of his many characteristics. Doubtless this explains much muddy thinking.—Exchange.

"Some men are always at their post—leaning against it."

Cucumbers, 5@10c each.

Fruits—Apples, 20@40c ½ pk; strawberries, 30@35c qt; 20c pt.

HAY AND GRAIN

Grain, Hay and Straw—Wheat, $1.30; hay, baled, timothy, $16@18; straw, $10@12.

Feeds (selling prices)—Bran, $41.50@42.50; shorts, $42@43; hominy, $39.50@40.50; middlings, $44@45; linseed, $57@58; gluten, $41@42; ground oats, $44@45, alfalfa, regular, $39@40.

MONDAY'S LIVESTOCK MARKET

Hogs—Receipts, 225; bulk of sales, $11@11.50; top, $12.25; heavy weight, 250@356 lbs, medium, good and choice, $10.50@11.50; medium weight, 200@250 lbs, medium, good and choice, $11.50@12; light weight, 160@200 lbs, common, medium, good and choice, $11.75@12.25; packing sows, rough and smooth, $8.50@10.50.

Steers—1100@1500 lbs, good, $10@12; medium, $8.25@10; common, $7.50@8.25; steers, 1100 lbs down, good, $9.75@11.75; medium, $8@9.75; common, $7.50@8.

Heifers—Good and choice, 850 lbs up, $7.50@9.50; common and medium, all weights, $5.25@7.50.

Cows—Good and choice, $6.50@8; common and medium, $3.75@7.50; low cutter and cutter, $2.75@3.75.

Bulls—Good and choice, 1500 lbs down (yearlings excluded), $7.50@8.25; cutter to medium, $5.25@7.50.

Vealers—Medium to choice, $11.25@14; cull and common, $6@11.25.

YORK PRODUCE

Butter and Eggs—Country butter, 50@55c; separator, 55@60c; eggs, 22@25c.

Poultry—Hens, 22@25c; dressed, $1@1.75; springers, 50@75c.

Vegetables—Potatoes, 15@30c ½ pk, $1@1.50 bu; cabbage, 5@20c hd; celery, 5@15c stalk; horseradish, 5@10c glass; onions, 10@12c box, 5c bch; soup beans, 15@20c qt; lima beans, 30@40c qt; dried corn, 10@15c glass; spinach, 15@18c ¼ pk; turnips, 12@18c ¼ pk; rhubarb, 5@8c bch; asparagus, 12@15c bch.

Fruits—Apples, 10@25c ¼ pk, 75c@$2 bushel.

Wholesale Grain Market—Wheat, $1.27; corn, 75c; rye, 90c; oats, 45c; bran, $38 ton; middlings, $41 ton.

BALTIMORE PRODUCE

Butter—Creamery, fancy, 46@47c; choice, $44@45c; do, good, 43@44c; do, prints, 47@49c; do, blocks, 46@48c; do, ladles, 32@34c; Md and Penna, rolls, 30@32c; Ohio and W Va, rolls, 30@31c; store-packed, 30@31c; Md, Va and Penna, dairy prints, 30@32c; process butter, 39@40c.

Eggs—Market steady; nearby fresh-gathered firsts, 1 sale, 25 cases, 22½c; closing offerings, nearby fresh-gathered firsts, 22½c, bid, 22¼c.

Live Poultry—Chickens, old hens, 4½ lbs and over, 28@29c, old hens, 4@4½ lbs, 28@29c; old hens, 3@4 lbs, 28@29c. Leghorns and other light stock, 23@25c, old roosters, mixed colors, 18@19c, old roosters, Leghorns, 12@15c; young chickens, springers, colored, 1¾ lbs and over, 40@45c; smaller, 35@45c, springers, Leghorns, 1¾ lbs and over, 35@38c, smaller, 30@35c. Ducks, White Pekins, 4 lbs and over, 25@28c; puddle, 4 lbs and over, 24@26c; Muscovy, 4 lbs and over, 24@26c; all kinds, poor and thin, 20@22c. Guineas, large size, 75@80c; small size, 50@60c. Pigeons, young and old, pair, 30@40c.

PITTSBURGH MARKETS

PRODUCE

Vegetables (wholesale prices)—CARROTS, new stock, Miss, ⅞-bu hmpr, $1.65@1.75; Texas, bu bskt, $2.50@2.75. CUCUMBERS, Ohio, hot house, chip bskt, fancy, $2.75; Fla, ⅞-bu hmpr, fancy, $3@3.75; choice, $2@2.75; Texas, bu bskt, No 1, $4@4.50. KALE, Md, bu bskt, $1.15@1.35. LETTUCE, Ohio, hot house, 3-lb bskt, 50@55c; 10-lb bskt, $1.65@1.75, Iceberg, crate, Arizona, $3@3.50, Calif, best, $4.75@5.50; poor, $3. MUSHROOMS, Penna, 3-lb bskt, $1.50. POTATOES, 150-lb sack, U S No 1 grade, Maine, Green Mountains, $4.50@4.75; Mich, Rurals, $4.50, Fla, bbl, Spaulding Rose, No 1, $6.75@7. RHUBARB, home grown, bundle 1 doz bchs, 20@30c. SPINACH, bu bskt, Md, $1@1.25.

Fruits—APPLES, bbl, N Y, Baldwins, $3.50@4; Russets, $4; bu bskt, N Y, Baldwins and Russets, $1.30@1.50; Starks, $1.25@1.50; Ohio, Bentleys, $1.10.

LIVESTOCK

Hogs—10@15c higher on weights 210 lbs down; practically no early sales on light lights and pigs; top and bulk, $11.15; 210@250 lbs, $10.25@10.85; 160@200 lbs, mostly $11@11.15; packing sows, $8@8.75.

Calves—Slow; barely steady; top vealers, $13.

Sheep and Lambs—Quotable steady on sheep and lambs; top wethers, $9.50; fat lambs around $16.

HAY AND GRAIN

Hay—No 1 timothy, $20@21, standard timothy, $19@19.50, No 2 timothy, $17.50@18, No 3 timothy, $15@16, No 1 light clover mixed, $19@19.50, No 2, $16.50@17; No 1 heavy clover mixed, $20@21, No 1 clover mixed, $20@21, No 2, $16@18, No 1 clover, $20@21, No 2, $16@18.

Oats—No 2 white, 56½@57c, No 3, 52½@53c; No 4, 46@50c.

Corn—Receipts nothing. No 2 shelled, 87@88c, No 3, 83½@85½c; No 4, 77½@79½c; No 5, 73½@76½c. Mixed corn value 2@5c under value of yellow.

NEW YORK MARKETS

PRODUCE

Butter—Irregular; creamery, higher than extras, 45¼@45¾c, creamery, extras, 92 score, 44¾c, creamery, firsts, 88@91 score, 40@44c; packing stock, current make, No 1, 33@34c, packing stock, current make, No 2, 31c.

Eggs—Irregular; fresh gathered, extra firsts, 25½@26½c; do, storage packed, 27½@28c, fresh gathered, firsts, 23@25c; do, storage packed, 26@26½c, fresh gathered, seconds, 22½@23c; nearby hennery whites, closely selected extras, 31@33c; nearby and nearby western hennery whites, firsts to average extras, 26@30c; nearby pullets, 23@25c; nearby hennery browns, extra, 29@32c; Pacific Coast whites, extras, 34@35c; do, firsts to extra firsts, 26@30c.

Live Poultry—Nominal; broilers, by express, 29@50c; fowls, by express, 26@32c.

Dressed Poultry—Quiet, broilers, fresh, 39@42c, old roosters, 15@21c, fowls, fresh, 22@24c; frozen, 20@32c, turkeys, fresh, 25@35c.

LIVESTOCK

Cattle—Steady. Steers, $7@12.25, state bulls, $4@7.60, cows, $2.50@6.50.

Calves—Steady, veals, common to prime, $8@13; lightweight culls, $6@6.50; fed calves, $6@7.

Sheep and Lambs—Steady, sheep, $3@9; culls, $3@4; southern springers, 58@70 lbs, $19.50 per 100 lbs, culls, $8@9.

Hogs—Steady; light to medium weights, $11@11.50, pigs, $12@12.25, heavy hogs, $9.75@10.50, roughs, $9@9.50.

HAY AND GRAIN

Feed—Quotations were as follows, all prompt shipment or thirty days. City bran, $37.50, middlings, $38 in 100-lb sacks, red dog, $46, nominal, western feed, bran, $36.50, in 100-lb sacks; standard middlings, $37; flour middlings, $40; red dog, $45; all in 100-lb sacks, all-rail or lake and rail, white hominy feed, $33.75, nominal, in 100-lb sacks, cottonseed meal, 36 per cent protein, $37.90; prompt shipment linseed oil meal, 34 per cent protein, $52.55, in 100-lb sacks.

Hay and Straw—Hay, old or new, large bales, timothy and light mixed, No 1, $26@27; No 2, $25@26, No 3 and poorer, $22@24. Straw, large bales, rye, $28.

Grain—WHEAT, No 2 red, c i f, $1.56½, No 1 dark spring, c i f, dom, $1.68, No 2 hard winter, f o b, export, $1.59; No 1 North Manitoba, in bond, f o b, export, $1.71⅛; No 2 mixed durum, f o b, export, nominal. CORN, No 2 yellow, 97¼c; No 3 yellow, 93¾c. OATS, No 2 white, 60c; No 3 white, 58½@59c; No 4 white, 55@57c; ordinary white, clipped, 60@66c; fancy white, clipped, 73@75c. RYE, c i f, export, $1.21¼. BARLEY, malting, c i f, domestic, $1.01⅜@1.03⅜.

CHICAGO LIVESTOCK MARKET

Cattle—Steady. Week's bulk prices follow: Good to choice weighty steers, $12@13.75; bulk steers, all weights, $10@12.75; good to choice light heifers, $9.75@10.75; fat cows, $6.50@8.25; cutter cows, $4.75@5.85; stockers and feeders, $8@9.25; choice feeders up to $9.75; half fat kinds, $10@11.

Hogs—Top, $10.40 paid for better grade hogs, 170@200 lbs, mostly in odd lots; bulk, 150@200 lbs, $10.25@10.40; 210@240 lbs, $10@10.25; 260@320 lbs, $9.65@9.90; heavyweight, $9.50@10; medium, $9.85@10.40; light, $9.85@10.40; light light, $9.50@10.40.

Sheep—Week's top prices: Fed wooled lambs, $17.50; clipped lambs, $16.50; spring lambs, $18.50; fat clipped ewes, $8.75. Bulk prices: Wooled lambs, $17@17.50; clipped lambs, $15@16.50; cull clipped lambs, $12@12.75; spring lambs, $16.25@18; cull springers, $14@15; fat clipped ewes, $8@8.25; desirable wooled ewes, $9@9.50.

WOOL MARKET

Boston, May 7, 1927.

Domestic: Ohio and Penna fleeces—Delaine, unwashed, 44c; ½-blood combing, 44c; ⅜-blood combing, 42@43c; ¼-blood combing, 41@42c. Michigan and New York fleeces—Delaine, unwashed, 41@42c; ½-blood combing, 43c; ⅜-blood combing, 42c; ¼-blood combing, 41@42c.

GRASS SEED—WHOLESALE PRICES

Cloverseed, cash, imported, $16.75, do, domestic, $26.50; October, $16.75. Alsike, cash, $24. Timothy, old, $2.50; new, $2.60; May, $2.60.

FEED PRICES

The prices below are for prompt shipments based on payment on arrival of cars as quoted by the Philadelphia jobbing trade to retail feed dealers on Monday, May 9, 1927. Quotations cover solid carlots for delivery at Philadelphia or Scranton rate points.

Pure spring bran	$37.00@37.50
Spring bran	36.[illegible]@36.75
Soft winter wheat bran	38.[illegible]@38.50
Hard winter wheat bran	36.50@37.00
Standard middlings	37.00@37.50
Soft winter wheat middlings	[illegible]@41.50
Flour middlings	[illegible]@42.50
Red dog flour	45.00@45.50
White hominy	35.25@36.20
Yellow hominy	35.00@36.20
36 per cent cottonseed meal	39.25@39.75
41 per cent cottonseed meal	42.75
43 per cent cottonseed meal	44.25@44.75
31 per cent linseed meal	51.75@52.20

Nearby millfeed in small supply; demand fair.

The Trend of the Markets

THE figures in the following table represent the approximate unweighted average prices of the commodities and grades specified. The prices are based upon quotations from the market page of Pennsylvania Farmer.

	This week	Last week	Month ago	Year ago
Butter, 92 score creamery extras (N. Y.)	$ .44¾	$ .45	$ .50½	$ .41
Eggs, fresh gathered extra firsts (N. Y.)	.26	.26	.26½	.31¼
Steers, good to choice (Lancaster)	10.87½	11.00	11.12½	9.00
Hay, Number 2 timothy, baled (Phila.)	21.50	21.50	21.50	24.50
Wheat, No. 2 red winter (Philadelphia)	1.51½	1.45¾	1.40¾	1.71
Oats, Number 2 white (Philadelphia)	.62	.59	.56½	.51½

Potato Prices Reach Peak

Review of the Week Ending May 7

POTATOES—The potato market opened strong with rather light offerings and an active demand. Prices reached the highest point of the season but trading became restricted at the higher levels. With a more limited demand the market showed a weaker tone and price declines occurred on both new and old stock. Shippers took advantage of the higher market and shipments were heavier.

EGGS—Arrivals of mid-western eggs were heavy on the New York market and supplies accumulated. There appeared to be a feeling that prices were too high and that lower prices would encourage consumption. Nearby white eggs were plentiful and more than ample for trade needs. All grades were lower at the close but there was a fair demand for fancy selected stock.

POULTRY—The live poultry market in New York was unsatisfactory. There was a fair demand for light fowl but the heavy stock was dull and slow. Large broilers were wanted and sold quite well when fancy. Fresh-killed broilers were rather scarce.

BUTTER—The butter market was fairly steady during the week. Eastern markets were 3@4c higher than in Chicago and as a result more butter was being shipped to these markets. Later in the week price declined one-half cent in the East and advanced in Chicago.

LIVESTOCK—The Chicago hog market closed weak with prices around 60c lower than last week. Fed steers were strong with light yearlings showing the greatest advance. Fat cows and all grades of butcher heifers advanced while stockers and feeders were firm. Vealers were generally steady. Spring lambs were stronger and sheep advanced about 25c.

FEED—The markets were practically steady. Future prices were lower as pastures were improving. Cottonseed meal was steady at the recent advance and linseed meal was firm. Gluten feed met a good demand while hominy feed was higher.

GRAIN—The market was strengthened by advances in foreign markets and by unfavorable weather which delayed corn and wheat plantings. Receipts were light and market stocks were reduced by the active demand for practically all grains.

HAY—The markets were irregular. Receipts of timothy were light and a stronger tone developed. Prices advanced at New York with a good demand. Alfalfa prices held steady but good pastures restricted the demand.

ASPARAGUS—The warmer weather caused receipts of New Jersey asparagus to increase in Philadelphia and prices dropped sharply. Green asparagus was in good demand and white was weak and dull. Small lots of Pennsylvania stock appeared on the market and sold at top quotations.

TEXT CUT OFF

Who Will Be the Master Farmers?

(Continued from page 3)

Legumes Plowed Under—If most of the plowed fields are devoted to cash crops, at least one-fourth of the cultivated acreage should be in legumes each year, and at least half of this legume acreage should be plowed under. If this is done, make no deduction under this head. If no legumes are plowed under on a farm where cash crops are extensively grown, deduct 15 points; if less than one-eighth of the total crop land produces a legume for plowing under, make deductions accordingly.

Commercial Fertilizers—If used in sufficient quantity with barnyard or green manure to replace plant food removed by crops, make no deduction, if not, deduct accordingly up to 15 points. If other methods of maintaining fertility are followed, disregard this point.

2. Crop Rotation—25 Points.

A good crop rotation should keep at least 25 per cent of the cultivated acreage in legumes. Deduct 1 point for each 1 per cent in which the rotation falls short of this.

The crop rotation should include a maximum of the most profitable cash crop, or on a livestock farm a maximum of feed most needed. The crop rotation should also provide for the distribution of labor. Cuts should be made in proportion as it falls short in these respects.

3. Seed Used—25 Points.

If home-grown seed has not been carefully selected and stored, deduct 10 points. If seed has not been tested, deduct 5 points. If seed has not been treated for the control of disease, deduct 5 points. If seed of mixed, unknown or unadapted varieties is used, deduct 5 points.

4. Quality of Livestock—35 Points.

If all sires are purebred, and all females productive and high-grade, make no deduction. If all females are purebred, add 10 points to the total score. Deduct 10 points for each grade or scrub sire in use.

Alternative.

Fruit and truck growers will deduct if trees or garden crops are not of varieties most suitable for locality; if trees or seed and plants are not secured from reliable growers.

5. Feeding and Care of Livestock—30 Points.

On a dairy or beef farm, if no silage or legume hay or an insufficient quantity is produced and fed, deduct 10 points. Whatever the class of livestock, if grain is not properly supplemented with protein feeds (home-grown or purchased) deduct 10 points. If used in insufficient amount deduct in proportion. Livestock should be thrifty, healthy, productive and properly housed. If not, deduct accordingly. Add 5 points to final score if sufficient alfalfa hay is produced for all livestock; add 5 points if cattle herd is U. S. accredited. Add 5 points if hogs are immunized against cholera; deduct 20 points if any contagious disease is present in the stock.

Alternative

Fruit and truck growers will deduct if trees or garden crops are not sprayed according to schedules recommended by the State Agricultural Experiment Station or other recognized authority; if general orchard or truck growing practices are below standard; if trees are not pruned regularly and properly; if weeds are not kept down; if insects or diseases are present.

6. Efficient Use of Man and Horse Labor—25 Points.

Work should be managed to keep labor and horses occupied with seasonable work. Deduct if winter hauling, machinery repairing, etc., are neglected and allowed to interfere with rush season work.

7. Adequate Tools, Machinery and Equipment Well Housed and Repaired—35 Points.

If the equipment is inadequate for the efficient handling of the farm work, is poorly housed, or in poor repair, deduct accordingly.

8. Convenience of Farm Arrangement—15 Points.

Where buildings are located in a manner that requires additional labor to perform work about them, deduct up to 8 points. If fields are not conveniently arranged as to shape and size, deduct up to 7 points.

9. Products of Farm—Yield and Quality—40 Points.

This paragraph covers all products sold off the farm. If the five-year crop average yields are twice the five-year average for the state, make no deduction. For yields below this standard deduct accordingly. The remaining twenty points are to be credited to quality of product. In this the scorer, or judges, will have to use their best judgment.

II. Business Methods and Ability—180 Points.

1. Relation of Income to Expenses—100 Points.

If operating and living expenses (including interest and taxes) exceed income for an average of five years, make full deduction. If income exceeds expenses, make no deduction except in the case of extravagant expenditures.

2. Accounting Methods—30 Points.

If a checking account is kept and all expenditures and receipts are properly recorded, give 15 points. If complete book account of income and expenses is kept and balanced at least once a year, give 30 points. If accounts are kept on a cost account basis give full score.

3. Business Reputation—50 Points.

If bills are promptly paid, and if reputation for honesty and square dealing is good, give full score; if not, deduct accordingly.

III. General Farm Appearance and Upkeep—90 Points

1. Repair and Upkeep of Buildings—30 Points.

Buildings should be kept well-painted and in good repair; if they fall short, deduct accordingly.

2. Appearance of Yards—30 Points.

Lawns should be in good condition, and well mowed. Shrubbery and trees should be healthy and properly cared for. Yards should be neat and free from weeds and rubbish. If they lack in any of these matters, deductions should be made accordingly.

3. Condition of Fields—15 Points.

Fields should be neat, and free from noxious or unsightly weeds. If they fall short of this standard deduct accordingly.

4. Condition of Fences and Ditches—15 Points

Deduct for broken or rotten fence posts, unstapled or broken wires, broken or missing gates, unsightly fence rows, and also for ditches that are not working properly, or are clogged with rubbish or filled with weeds.

IV. Home Life—300 Points.

1. Convenient House—50 Points.

Do not score on size or cost of farm house, but only on its convenience and adaptability as a home. Deduct in proportion as it falls short of this.

2. Labor-Saving Equipment in the Home—75 Points.

If no water system is provided, deduct 20 points.

If no sewage disposal system has been installed deduct 15 points.

If no heating system other than a stove is in use, deduct 10 points.

If no lighting system other than kerosene lamps, deduct 10 points.

If no refrigerator or cooling system, deduct 10 points.

If no power washer, deduct 10 points.

If any of these conveniences are inefficient or in poor repair, deduct accordingly.

3. Character as a Husband and Father—100 Points.

This must be necessarily a matter of judgment. A man who is kind to his wife, makes her tasks easy, gives her trips away from home, and sees that she is provided entertainment, who is also a companion to his children, taking an interest in their training, their recreation, and their problems, should receive a full score. Deduction should be made in proportion as he falls short of this standard.

4. Education and Training of Children—75 Points.

If children are kept in school thru eight grades, give 30 points. If sent thru high school, give 40 points. If sent thru college give 50 points. If home is well supplied with good books and periodicals, add 15 points. If the children are helped and encouraged with their school work add 10 points.

V. Citizenship—140 Points.

1. Neighborliness—40 Points.

Do neighbors regard him as a good neighbor and a healthy friend? Is he cheerful and friendly, always ready to help where help is needed and always avoiding a quarrel with a neighbor? If so, give full score. If not, deduct in proportion as he falls short of this standard.

2. Interest in Schools and Churches—40 Points.

If he visits schools, or otherwise shows evidence of an active interest in school affairs, give 15 points.

If he attends church with reasonable regularity give 15 points.

If he is active in religious education work, give 10 points.

3. Interest in Other Community Enterprises—30 Points.

If not a member of farmers' organizations, deduct 15 points.

If an inactive member, deduct 5 points.

If known in the community as a chronic "knocker" on community enterprises, make full deduction.

4. Interest in Local and National Governments—30 Points.

Deduct 15 points for failure to vote in either of last two elections, unless prevented by sickness or other unavoidable occurrence.

Adams Leads in Apples

OVER 60 per cent more apples were shipped by rail from Pennsylvania points in 1926 than in 1925. The total for 1926 was 3919 carloads, according to the State Bureau of Markets. Biglerville, Adams County, was the largest shipping point, its loadings amounting to 728 cars. The leading apple shipping counties were:

	Car Loads		Car Loads
Adams	1657	Bedford	33
Franklin	1273	Snyder	26
Cumberland	307	Centre	23
York	174	Union	23
Wyoming	46	Lycoming	19

As a result of last fall's large crop 3341 cars were shipped during the last four months of 1926 as compared with 1786 cars during the same period in 1925.

The Market Place

By W. B. WHITACRE,

Pennsylvania Bureau of Markets.

TWELVE years ago I made my first trip to the Philadelphia market with a team of dapple grays and a shelving load of string beans. I wasn't much of a horseman but I got along all right until we drove on the ferry boat and the tongue of the wagon made a big dent in the back of the flivver ahead. The owner was pretty hot but nothing came of it.

I got to the commission house safely and I'll never forget the piles and heaps of produce. String beans stacked as high as the top of the cast iron awning, heaps of bunched carrots and beets, great stacks of apples and vegetables of all kinds. I wondered how they could ever sell them all. During the next three years I made many more trips to the market and gradually became acquainted with the salesmen, the stevedores and the other drivers.

There was "Chicken Breast Kelly," who hadn't been sober since childhood. There was Bill, the negro who used to travel with the circus and whose arms were tatooed in red with bathing beauties of an earlier day. There was Tom, the salesman with one eye crossed and the other normal.

One that I remember best was Jim. He was the "workin'est" man I ever knew. The loads he could carry on those huge shoulders! He was what they called a "hard egg," a fighter, but when my back was about breaking from lifting baskets he would tell one of the boys to come up on the wagon and help me.

An engineer on the ferries was a ventriloquist and he tried to teach me his art but I guess I wasn't made that way. There was another who used to carve monkeys and squirrels from peach stones and give them to boys in return for peaches or apples.

When I left the farm I thought I would never see them all again but after going to college, farming, working on newspapers and railroads I came back again, three years ago. There were many changes but most of my old friends were still there. The produce business is like farming, once it gets in a man's blood he finds it hard to break away.

Now markets and marketing are my work and we fellows who are closely associated with the markets see many interesting things that can't be put in the market reports. If you are interested I'll try to take you along with me from time to time, introduce you to the men who sell your products, to the ones who buy them, tell you the things that I see.

Why I Use Commercial Fertilizer

(Continued from page 2)

ly as an experiment, using 400 to 450 pounds of 3-10-4 fertilizer per acre with a yield of 25 bushels per acre. I found that I could grow wheat successfully by using enough fertilizer to get a good, strong root system to stand our soil heaving in the spring, and also having enough fertilizer in reserve to push the plants ahead during spring and summer. I then cut out rye and grew all wheat, yielding as much as 30 bushels per acre on my entire crop of 15 acres, averaging approximately 28 bushels per acre for the last seven years.

Fifteen acres of wheat yielding 28 bushels per acre equals 420 bushels which at $1.25 per bushel makes a total of $525.00 for the 15 acres of wheat.

Fifteen acres of rye yielding 22 bushels per acre equals 330 bushels at $1.00 per bushel makes a total of $330.00 for the 15 acres of rye.

Using 250 pounds more of 3-10-4 fertilizer per acre for the wheat than the rye at $30.00 per ton would mean an extra cost of $3.75 per acre, or a total of $56.25 against the wheat crop or a balance of $468.75 for the wheat crop, leaving a profit of $138.75 for an investment of $56.25 for the extra fertilizer used to grow wheat.

The hay crop that follows the wheat yields considerably better. Timothy and clover seed catches better and I have less weeds and a better quality of hay.

I also apply 100 pounds more of fertilizer to the corn crop and get larger yields but do not see such a marked difference as in the wheat crop as we always apply a heavy coat of manure before plowing for corn.

My experience has taught me that I must use plenty of fertilizer to make the soil produce to its maximum and I find profits will double.—**Willis M. Hunsberger, Bucks County, Pa.**

High Grade Cheapest

Third Prize Letter

I CAME to Harford County, Maryland from western Michigan nine years ago and bought a farm. At that time, commercial fertilizers were very little known and seldom used on general farm crops in my home state. Winter wheat yielding 15 to 18 bushels per acre was considered a good crop there. Of course, here in Maryland the soil had been under cultivation about one hundred years longer and the farmer would not think of sowing wheat, or seldom any other crop without some commercial fertilizer. The soil is rather heavy and retains for the crop's use whatever you put into it, but many years of cropping have used up the natural plant food to a large extent.

Some of my Maryland neighbors were using a 2-8-2 commercial fertilizer, about 300 pounds to the acre on wheat. So I started in to feed my crop of wheat in like fashion.

The first two years I received a yield of 22 to 25 bushels per acre. Some advance over yields that were not fed commercial fertilizer in Michigan. About this time I found that some of the best farmers were raising as high as 40 bushels per acre. That they were using a higher grade fertilizer that furnished more plant food at less cost per unit. The following year I bought 2-10-4 commercial fertilizer for wheat, using 400 pounds to the acre. The wheat and straw of that crop were of better quality and yielded 35 bushels per acre. I could tell you the same story about other crops which show that, while modern equipment and good seed are necessary, crops starved or only lightly fed will not produce a profit any more than the cow, the sow or the hen.

Hungry Tomatoes Respond to Food

Many farmers here produce canning crops, especially tomatoes. I had never grown them in a commercial way before coming here. I put out my first acre as some of the farmers here did, using from 300 to 400 pounds of 2-8-5 commercial fertilizer in the hill per acre. The plants started off quite well after the first shower but as the rootlets began to reach out for more food the supply was short. After coming into bloom they grew very slowly. The tomatoes were small, they began to crack and get yellow, were green around the stem and failed to ripen properly. Many of the vines developed wilt or blight and altho given good cultivation yielded only 200 bushels per acre. Stories reached me of certain growers getting 400 bushels per acre and I found these men were more liberal with plant food in quality and amount of fertilizer than I had been. The next year I prepared another acre, bought 1000 pounds of 2-8-10 commercial fertilizer, drilled it on broadcast 500 pounds at a drilling, the two applications being about two weeks apart, and disced well after each application. Those plants were set out the same distance and soon covered the ground. Big clusters of tomatoes, six to eight each, ripened up perfectly. I seldom found one that had cracked or grown yellow. No blighted vines to be seen and I picked from that acre and delivered to a canning house 530 bushels of as perfect tomatoes as you ever saw. I have profited by the liberal use of commercial fertilizer. Don't let your crops go hungry.—**E. R. Green, Harford County, Md.**

From the Week's News

THE SEVENTEEN-YEAR locust is scheduled to appear this summer in Adams, Cumberland and Franklin Counties, Pennsylvania, according to the State Bureau of Plant Industry. Little damage is anticipated as the insect seems to be dying out. The last outbreak was in 1910, and the one before that was in 1893.

§ § §

WESTERN DAIRYMEN are not equipped to produce milk of the high quality required by New York City and, therefore, should not be allowed to compete with producers of the New York milk shed. That is the contention of Empire State dairymen who have petitioned Mayor Walker to give eastern producers an opportunity to supply the metropolitan market and not widen the supplying territory by admitting western milk.

MERCER COUNTY, PA., has been an accredited area for three years and is now starting upon its first check-up test. In other words, the tuberculosis eradication campaign was completed three years ago, all the cattle in the county being declared disease-free. This summer's test will determine how many animals have developed the disease since that time. Mercer was Pennsylvania's first accredited county.

Veterinary

Conducted by Dr. J. F. Shigley
Associate Professor of Veterinary Science, Pennsylvania State College, and Veterinarian in charge of College Livestock.

Advice thru this department is free to our subscribers. Each communication should state history and symptoms of the case in full; also the name and address of writer. Initials only will be published. We invite readers to make use of this service. Clippings from the column when properly preserved and classified, make one of the most valuable medical symposiums a farmer-stockman can obtain.

COW HAS COUGH.—I bought a three-year-old cow about seven weeks ago and she is a beauty. In the morning when I go to milk her she coughs and coughs. The people I bought her from used to give her dry feed, I always use the feed in water. I heard my mother say dry feed affects a cow's throat so if that is the case I would not worry about using the milk, but if she is getting T.B. I will not keep her because I give a lot of the milk to my five children. She is a registered cow. —Mrs. P. McD., Wharton, N. J. If this cow has not been tested for tuberculosis, it is advisable to have the test applied. The cough may come from an inflammation of the larynx or pharynx or bronchi. A careful examination by your nearest graduate veterinarian would be advisable.

COW BLOATS.—My heifer is full of gas in her stomach. Her appetite does not seem so very good. She will freshen in July. Do you think she will bloat when she gets into the clover this summer? I cannot always see her when she is in the field so if she bloats she might die before I could find it out.—C. C. S. New Freedom, Pa. It would be well for you to see that this animal has a laxative diet. By this is meant the use of bran, roots or oil meal in the diet. A careful check of the amount fed is desirable in order that amount may be limited. It is possible that this condition of bloat will disappear after calving. Should there be a continuance of this condition after calving and regulation of diet, feel free to write again for information.

SALT FOR DAIRY COWS.—I have a tank six feet long and twenty-four inches wide and deep. I put two quarts of salt in the water daily. Is this harmful to my cows? My cows cough a lot. What causes this? How much salt should a cow get a day?—J. S. M. The common method of providing salt for cattle is to allow free access to salt either in block form or loose salt in boxes protected from rain. The animals will eat what they desire. Salt may be added to the diet so that each animal will receive about one ounce daily. Such practices seem more desirable than adding salt to the drinking water. Have your cows been tested for tuberculosis? This is the first question to be considered when cows cough altho the condition may be one of inflammation of the larynx or pharynx.

Women have only two faults: they leave you too quickly or they stick too long.

Our Readers' Classified Advertising Department

A market place to buy or sell at little expense. Over 100,000 farm families read Pennsylvania Farmer every week. Rate 8 cents a word each for one, two or three consecutive weekly insertions; 5 cents a word each for four or more insertions. Count each number and initial and send cash with order. Orders, discontinuances or changes of copy must reach us by Wednesday of week preceding date of issue. All advertisements set in uniform style, no display type or illustrations. Poultry advertising may run here, but if displayed or illustrations used must run in display advertising columns at commercial advertising rate (65 cents per agate line). Livestock advertising not accepted in this department. Minimum, ten words.

Formulas of

AMCO 32% SUPPLEMENT
AMCO 24% UNIVERSAL
AMCO 24% DAIRY
AMCO 20% NATIONAL
AMCO 20% DAIRY
AMCO 12% FITTING RATION

by*College Feed Conference Board

(feeding experts of 19 states)

THE best judges of dairy feed in America are the members of the College Feed Conference Board. Nineteen state colleges have representatives on this Board, men who spend their lives studying feeds and cows. They have access to everything new which comes out in experimental feeding work. They are constantly in touch with what thousands of farmers are feeding and the results they get.

It was to this Board, meeting in Buffalo on March 11 and 12, that Amco submitted the formulas of Amco-mixed, open formula dairy feeds: Amco 32% Supplement, Amco 24% Universal, Amco 24% Dairy, Amco 20% National, Amco 20% Dairy, and Amco 12% Fitting Ration.

Each of the formulas was carefully considered by the committee on the basis of its ability to do the particular job for which it is intended; that is, supplement the roughage, the silage, or the farm-grown feeds in such a way that a dairyman can make money feeding it and keep his herd healthy and producing.

500,000 Cows Ate Approved Open Formula Feeds in 1926

All of the formulas as presented for Amco-mixed dairy feeds were approved by the Board without change. This simple fact means more than all we could say about these feeds from now to Doomsday. For these men are *practical* leaders in dairy feeding. Last year, for example, a half million cows were fed according to their approved formulas and on thousands of farms home-mixed rations are in daily use which are based on their advice.

Flexible Formulas Approved

The policy of altering formulas from time to time to give dairymen the advantage of good market buys was unanimously approved by the Board and specifications were adopted stating definitely what changes can be made with perfect safety to the cow and continued good results in the milk check.

Such changes will be made, *within the Board's specifications,* in Amco 32% Supplement, Amco 24% Dairy, Amco 20% Dairy, and Amco 12% Fitting Ration when markets make it advisable. The formulas of Amco 24% Universal and Amco 20% National will not change.

Amco Buying Power

Amco Feed Mixing Service distributes every month a very large tonnage of open formula feeds. This service is growing rapidly as more farmers come to know about it and to appreciate what a saving they can make through it. As volume grows, buying power grows. Volume and increased buying power means a favorable price.

These open formula dairy feeds (as well as poultry, hog, and horse feeds) are available in your community through an authorized Amco Agent. If your community has not yet had this service, write to the division office.

The famous Goodyear Pathfinder. Car owners have already bought nearly 5,000,000 of these lower-priced, standard quality Goodyears.

Not in any catalogue

One of the biggest safeguards of low-cost tire mileage is not to be found in any catalogue.

That is the helpful *service* performed for you by the local Goodyear dealer.

He doesn't merely sell you a Goodyear Tire and let it go at that. He sees that you get the right size and type; he mounts it on the rim; he fills it with air.

This is worthwhile service, saving you effort and time; but his biggest contribution comes *after* the sale.

As long as that Goodyear Tire is in use he helps you give it the care it should have in order to deliver the best results.

This money-saving service is available in your home town, as part and parcel of the Goodyear policy: *to build the greatest possible value into Goodyear products,* and *to provide facilities so that users can get all this inbuilt value out.*

Goodyear makes a tire to suit *you*—whether you want the incomparable All-Weather Tread Goodyear, the most famous tire in the world, or the lower-priced Goodyear standard quality Pathfinder

Students' Show and Association Meeting Attract Dairymen

THE Penn State Dairy Exposition put on by the students in the Dairy Department at the Pennsylvania State College, May 7, attracted a large number of dairymen and their wives. The occasion was of double interest on account of the fact that a meeting of the Pennsylvania Dairymen's Association was held at the college on Friday evening.

The students' organization which backed the exposition is known as the Penn State Chapter of the American Dairy Science Association. J. M. Stazewski, Harrisburg, is president; R. B. Ace, Tunkhannock, vice president; M. A. Farrell, Waverly, secretary and F. W. Morrow, Camptown, treasurer.

Interesting Program Arranged

President R. D. Wetzel welcomed the dairy farmers in a pleasing address which was responded to on the part of the Dairymen's Association by Robert Brinton of West Chester, secretary and treasurer of the association. The program was in charge of E. B. Fitts, State College, president of the association.

"What the College Teaches the Dairy Student" was the subject of a talk by A. A. Borland, head of the Penn State Dairy Department and Dairy Editor of Pennsylvania Farmer. A dairy student at Penn State gets a good general education, including work in English, mathematics, chemistry, physics, botany, geology, history, zoology and economics. On this foundation he builds the technical training along dairy lines. He may take a specialized course in dairy production, dairy manufacturing, or bacteriology, or he may take a broad general course in dairying, including in addition to dairy subjects, work in farm crops, plant and animal disease, fruit growing, poultry husbandry, general livestock and farm management.

"New Dairy Legislation" was discussed by R. W. Balderston, secretary of the Inter-State Milk Producers' Association at Philadelphia. The dairy industry is in good shape from a legislative standpoint.

John W. Warner, County Agricultural Agent of Indiana County, discussed the subject of soy bean hay. Hundreds of acres of soy beans have been grown in Indiana County. They make hay practically equal to alfalfa for milk production purposes. They will make a good growth on soil which is too acid for alfalfa or sweet clover. The speaker emphasized that the seed should be inoculated with the proper type of bacteria.

Value of Silage Stressed

R. H. Olmstead, Dairy Extension Specialist at State College, showed the value of silage for milk production purposes and stated that this was the time to make arrangements for securing a silo and planting a silage crop for the coming season.

R. L. Watts, Dean of the School of Agriculture, gave some interesting

Pennsylvania County Fairs

THE following schedule gives the time and place of the principal county fairs and exhibitions to be held in Pennsylvania during the coming season. The list, subject to minor change in dates in a few cases, includes all fairs reported to the Bureau of Statistics, State Department of Agriculture, up to May 1st.

County	Association or Society	Place	Date
Armstrong	Armstrong Co. Fair Association	Ford City	Aug. 17-20
Armstrong	Dayton Agrl. and Mechanical Assn	Dayton	Sept. 6-9
Beaver	Beaver Co. Agricultural Association	Beaver	Sept. 22-26
Bedford	Bedford Co. Agricultural Society	Bedford	Sept. 27-30
Berks	Agrl. and Hort. Assn. of Berks County	Reading	Sept. 13-17
Berks	Kutztown Fair Association	Kutztown	Aug. 16-19
Bradford	Bradford Co. Agricultural Society	Towanda	Aug. 30-Sept. 3
Bradford	Inter-State Fair Association	Athens	Sept. 13-16
Bradford	Troy Agricultural Society	Troy	Sept. 6-9
Bucks	Bucks County Agricultural Society	Quakertown	Aug. 23-27
Bucks	Doylestown Fair Association	Doylestown	Oct. 4-8
Butler	Butler Fair and Exposition	Butler	Aug. 23-26
Butler	North Washington Agrl. Assn	N. Wash'ton	Aug. 30-Sept. 2
Cambria	Cambria County Fair Association	Ebensburg	Sept. 5-10
Cambria	Cambria County Agricultural Assn.	Carrolltown	Sept. 20-23
Carbon	Carbon County Agricultural Assn.	Lehighton	Sept. 13-17
Centre	Grange Encampment & Centre Co. Fair	Center Hall	Aug. 27-Sept. 2
Chester	Chester County Agricultural Assn.	West Chester	Sept. 1-3
Clarion	Clarion County Fair Association	Clarion	Aug. 30-Sept. 3
Clearfield	Clearfield County Agrl. Society	Clearfield	Sept. 13-16
Columbia	Columbia Co. Agrl., Hort. and Mech. Assn.	Bloomsburg	Oct. 3-8
Crawford	Oil Creek Agrl. Association	Titusville	Aug. 30-Sept. 2
Cumberland	Mifflin Agricultural Assn.	Newville	Sept. 20-23
Dauphin	Dauphin Co. Grange Fair Assn.	Harrisburg	Sept. 5-9
Dauphin	Gratz Agrl. and Hort. Assn	Gratz	Sept. 20-23
Elk	Elk Co. Farmers' Agrl. Fair Assn	St. Marys	Sept. 5-9
Erie	Wattsburg Agricultural Society	Wattsburg	Aug. 30-Sept. 2
Fayette	Fayette Co. Fair Association	Dawson	Sept. 5-10
Franklin	Franklin Co. Farmers' & Breeders' Assn.	Chambersburg	Sept. 6-9
Greene	Waynesburg Fair and Agrl. Assn	Waynesburg	Aug. 23-26
Huntingdon	Huntingdon County Agrl. Assn	Huntingdon	Aug. 23-26
Indiana	Indiana Co. Agrl. Society	Indiana	Sept. 13-16
Indiana	Green Township Community Assn.	Cookport	Sept. 29-Oct. 1
Jefferson	Jefferson County Fair Association	Brookville	Sept. 20-23
Juniata	Juniata County Agrl. Society	Port Royal	Sept. 13-16
Lebanon	Lebanon Valley Fair Assn.	Lebanon	Aug. 30-Sept. 3
Lehigh	Lehigh County Agricultural Society	Allentown	Sept. 20-24
Lycoming	Lycoming County Fair Association	Hughesville	Oct. 11-14
McKean	McKean County Fair Association	Smethport	Aug. 31-Sept. 3
Mercer	Mercer County Agrl. Society	Stoneboro	Sept. 3-7
Mercer	Mercer Central Agrl. Society	Mercer	Sept. 13-15
Mifflin	Mifflin Co. Agrl. and Hort. Assn	Lewistown	Sept. 16-20
Montgomery	Montgomery Co. Agrl. Assn.	Hatfield	Aug. 30-Sept. 5
Perry	Perry County Agrl. Assn.	Newport	Sept. 20-23
Philadelphia	The Pennsylvania Hort. Society	Philadelphia.	Sept. 27-29
Schuylkill	The Schuylkill County Fair Assn	Cressona	Sept. 6-9
Somerset	Somerset County Fair Association	Meyersdale	Sept. 20-23
Somerset	Jenners Fair Association	Jenners	Sept. 13-16
Sullivan	Sullivan County Agricultural Society	Forksville	Sept. 27-30
Susquehanna	Harford Agricultural Society	Harford	Sept. 13-15
Tioga	Smythe Park Association	Mansfield	Sept. 20-22
Union	Union County Fair Association	Lewisburg	Sept. 27-30
Venango	Venango Co. Farmers' & Fruit Growers Association	Oil City	Oct. 13-15
Warren	Warren County Agricultural Association	Warren	Sept. 5-9
Washington	Washington Fair Association	Wash'ton	Aug. 30-Sept. 2
Washington	Union Agricultural Assn	Burgettstown	Oct. 4-6
Washington	The West Alexander Agrl. Assn	W. Alexander	Sept. 13-15
Wayne	Wayne County Agricultural Society	Honesdale	Sept. 27-30
Wyoming	Wyoming County Fair Association	Tunkhannock	Sept. 20-24
York	York County Agricultural Society	York	Oct. 4-8
York	Hanover Agrl. Society, Inc.	Hanover	Sept. 20-24
York	Stewartstown Agrl. Assn.	Stewartstown	Sept. 14-17
York	Fawn Grove Fair Assn	Bridgetown	Aug. 10-13

Police Protection for Farm Homes

The State Troopers Are the Guardians of Pennsylvania's Rural Communities

By C. L. WHITE

THE Pennsylvania State Police Force is primarily a rural police organization. It has done more than is generally realized for the protection of farm families and their property; it can do still more when farmers learn to cooperate with the Troopers of the sub-stations scattered over the state, as will be explained in the continuation of this article next week.

In this issue we publish the first of a series of thrilling stories about this world-famous organization by Katherine Mayo. The most imaginative fiction writer would not dare invent situations so amazing nor heros so brave as those about which Miss Mayo has written. Yet these unbelievable stories actually are true. Read the first one, "According to Code," on Page 20.

DURING the last twenty-odd years the Pennsylvania State Police force has earned a world-wide reputation for its relentless skill in running down hardened criminals and for its cool-headed, iron-willed courage in handling angry mobs. That reputation frequently is allowed to overshadow the fact that this organization was formed primarily to give adequate police protection to the rural districts of Pennsylvania.

Prior to the establishment of the Department of State Police in 1905 the farms and unincorporated towns of Pennsylvania were without police protection, as they are even today in many other states. The citizens who needed protection most—the isolated farm families with their exposed and unguarded property—were virtually ignored by the Commonwealth. The state said, in effect, "We make laws against thieves and barn burners and molesters of women, but we don't try to enforce them."

True, there were two officers of the law, the county sheriff and the township constable. But neither had the least training in the detection of criminals or the prevention of crime. The sheriff might know how to catch votes, but that didn't help him catch highwaymen and murderers. The constable, often aged or crippled, was busy trying to earn a living. Why should he take time off from his daily work to search for lawbreakers when he was paid only for serving warrants and subpoenas?

While the best intentioned of sheriffs and constables were ineffective in rural districts, their plight in industrial and mining sections was even worse. It required unusual courage for an officer even to attempt to perform his duty in time of labor disputes. Any move on his part was almost certain to bring personal danger at once and reprisals later. Mobs had been known to chase a sheriff's posse of sworn deputies and to run a pompous constable out of town with a bucket of hot water and a mop.

Part of Troop C. Pennsylvania State Police, on parade near Reading, Berks County.

Who Was Left?

When the sheriff's forces are put to flight and the constable is run out of town who is left to enforce the law?

That was the question in the mind of Samuel W. Pennypacker when he became governor of Pennsylvania more than twenty years ago. Mr. Pennypacker used to say that he took an oath of office binding him to enforce the laws of the state but when he looked around to see what instruments he had to use in fulfilling this obligation he found only three, his private secretary, who was a small man, his woman stenographer and the negro janitor. So he created the State Police.

Governor Pennypacker placed the whole responsibility of forming the new organization on the shoulders of Captain John C. Groome, then commander of the First City Troop of Philadelphia, a volunteer military body that has honored itself in every American war since its formation in 1774. He accepted the appointment as first Superintendent of State Police only on the condition that he be free from political interference.

Captain Groome had no precedent for a guide, so he planned an entirely new type of organization, selected his men according to the most rigid standards, and within a few months put four troops of Pennsylvania State Police into the field. His original plan has stood the test of time in Pennsylvania and has been adopted as a model in other states.

Order Number 6 Doesn't Compromise

The first Superintendent's ideas about political interference rule the Force to this day. The few members who have tried "pull" and "influence" to further their ambitions know that Paragraph IV of General Order Number 6 means what it says. It reads: "Any member of this Force known to have used outside influence for the furtherance of his interests will be considered as acknowledging his incompetence and will be dropped from the service."

The plan of organization of the Pennsylvania State Police is very simple. The Governor appoints the Superintendent of State Police; the Superintendent appoints the rest of the Force and such deputies, statisticians, experts and other assistants as he may deem necessary. The present Superintendent is Major Lynn G. Adams. He succeeded Major Groome when the latter resigned.

The Force as authorized by law consists of a Deputy Superintendent, an Executive Secretary, five troops each consisting of a captain, a lieutenant, a first sergeant, five sergeants, ten corporals, sixty-five privates and a school troop under a captain, two lieutenants, a sergeant and two corporals. A Bureau of Fire Protection and a Division of Criminal Identification and Information are maintained as a part of the work of the Force.

Force Has Almost Unlimited Power

The members of the Force may make arrests without warrant for violations of the law which they witness. They may serve warrants issued by the proper local authorities and are empowered to act as forest, fire, fish and game wardens. They have all the powers conferred by law upon the police of cities of the first class or constables of the Commonwealth. The Governor at any time may call upon the State Police to enforce the laws and regulations of any other department, board or commission of the state government. The Force has almost unlimited power in dealing with the problem of fire prevention thruout the state.

The effectiveness of the Pennsylvania State Police may be attributed principally to three things. The first is the high calibre of the men chosen and the strictness of the discipline maintained. Nearly every trooper on the Force has seen active service in the United States Army. Many are veterans of bitter guerilla campaigns in the Philippines. They know the meaning of iron discipline.

Pass Severe Tests

Before any man is taken onto the Force he must pass the strictest kind of physical and mental examination. He must be an expert horseman. If he survives the initial examinations he is sent to the School Troop for intensive training.

"Are many newly enlisted men dropped while they are in training?" we asked a Troop Captain recently.

"Lots of them," he answered with a slow smile that we didn't understand until we knew more about the School Troop. The months he spends in training do more for the new man than merely harden his body and train his mind. Every fibre of his being is put to the severest test. If he has the slightest streak of "yellow" or fails in any way to measure up to the standard of the Force he is immediately dropped. It is as much the business of the School Troop to keep the wrong men off the Force as it is to train the right ones.

"Several times I have seen one State Police Officer quietly handle an unruly

Vol. 95, No. 21 Phila., Pa., May 21, 1927 Whole No. 1566

OUR JOB is to serve our readers. Whenever you are puzzled write to us and we will help you if we can.

We are made by what we do today rather than by what we did yesterday, or intend to do tomorrow.—Uncle Ab

The Master Farmer Award

WE WISH to emphasize the importance of the announcement made last week that Pennsylvania Farmer during 1927 will supervise the selection of twelve Master Farmers in our territory. If you have not read the article and the score card, turn to page three of the issue of May 14 and read it. See if you know someone who will measure up well with the requirements. We would like to have every county represented by a candidate for the honor. Filling out the blank score card for a candidate, and sending it to us with your own name, will place him in nomination. Of course, the final judging and scoring will be done by others as the directions indicate, but we would like every one nominating a candidate to fill out the score card as carefully and justly as possible. Master Farmer awards have been made in several other states and have aroused enthusiasm in the cause of better farm conditions. We are confident that the farmers of Pennsylvania Farmer territory will be equally enthusiastic when they become familiar with the plan.

Reciprocity Up Again

THERE are no doubt many who will recall the furor created sixteen years ago by the attempt to establish a reciprocal trade agreement between this country and Canada. The word "reciprocity" was new then to most people but it sprang up into common use very quickly, especially among farming people. Several such treaties were made with other countries, but none with Canada. In every instance where such an agreement was made or proposed, the other party was an agricultural nation.

The principle of reciprocity applied means free trade between the countries adopting the plan. Reciprocity between this nation and Canada would mean the free exchange of goods between the two nations. Any protection existing because of our tariff laws would be annulled. Such a proposal is being revived now. Just who is back of it is not disclosed, but it is well known that there are those who would like free access to Canadian markets for manufactured goods, while at the same time permitting Canadian products, which are chiefly agricultural in character, to come into the United States free of duty.

Reciprocity in theory is just and equitable when adopted universally, but if it is applied by this country to agricultural countries only, it is manifestly unfair to farmers. If the principle of a protective tariff is to be applied to any industry, it should apply to all. Politicians should recall what happened to President Taft in 1912, following his strong advocacy of the Canadian reciprocity idea in 1911.

Will We Become Vegetarians?

FOR some reason or other the people of the United States are eating less meat than formerly. History shows that it always has been customary in agrarian countries to eat large quantities of meat in pioneer days. The figures for 1922 show that the per capita consumption in Argentina was 346 pounds, in New Zealand 312 pounds, and in Australia 227 pounds. Compared to the United States and Canada, which were averaging 160 pounds, or Great Britain with an average of only 127 pounds, such figures are tremendous.

Half a century and more ago the people of the United States probably ate as much meat as any other nation, but the per capita consumption has steadily declined. A recent writer points out that while the population has risen from 76,000,000 to 118,000,000 since 1900, or over 53 per cent, the total number of food animals has declined in the same period from 192,000,000 to 156,000,000. In other words in 1900 we had more than two and one-half meat animals for every inhabitant, while today we have only a little over one and one-fourth animals. Of course, in 1900 we exported immense quantities of meat, but the exports have been gradually lessening until they have almost vanished in some lines.

What Should Education Do?

AS THE schools close it is but natural that parents and others interested should ask, "What have the pupils learned?" We feel that many place too much importance on the figures on report cards. Real education cannot be weighed nor measured. Its only true test is character and ability. The Journal of the National Education Association "boxes" the following as a list of what education should do for a pupil, and says that a child's schooling should not stop until:

1. He habitually maintains himself in sound health.
2. He is a constant learner in all the problems of life.
3. He maintains his home relationships with an appreciation of their meaning to him and to society.
4. He assumes his responsibility for faithful citizenship, including the duty of helping to form righteous public sentiment.
5. He is able to maintain himself happily in a useful vocation with a fair prospect of growth and advancement.
6. He knows how to use leisure time in ways that build up, enrich and beautify his own life and the lives of others.
7. He appreciates ethical character as a means of harmonizing his own life with the well being of his fellows.

Would Enlarge the Milk Shed

THE consideration which the New York City Department of Health is giving to the question of widening the area which supplies the city with milk is causing the dairymen of that territory considerable concern. The dairymen of one section have already held a meeting at which resolutions protesting against the proposal have been passed and sent to Mayor Walker and Doctor Harris, Commissioner of Health.

The dairymen point out that they have at great expense endeavored to meet the ever increasing health regulations made by the city, that the supply from the present field is ample to supply the needs of the trade, and that the bringing of milk from new territory is unnecessary and would be unfair.

There seems to be a disposition on the part of the milk dealers in the city to disregard the interests of nearby territory. They no doubt feel that if they shall be permitted to increase the territory and the supply it will bring about a much desired competition and enable them to buy their milk at cheaper prices. If the Mayor and health authorities grant the request it will work a hardship upon the present producers in the New York milk shed. But it may be done. The lay mind can know but little of what goes on under the surface in politics and business,—especially when they work together.

Editorial Sidelights

IN OBTAINING Katherine Mayo's great true stories of the Pennsylvania State Police we believe we have secured a treat that Pennsylvania Farmers will appreciate. These narratives excel in interest the greatest detective and adventure fiction we have read. They are all the more interesting because they are true and because they deal with places we know and with people who live in Pennsylvania and adjoining states.

For example, the action of this week's story on Page 20 takes place in Fayette County. And First Sergeant Stout of Troop A, who took his two murderous prisoners to jail even after one of them had shot him between the eyes with a rifle, is now Captain Stout of Troop E with headquarters at Harrisburg.

These aren't all to be blood and thunder stories. There is rich humor in some of them, and in others we shall see some of the country's greatest detectives at work. These detectives had real problems to solve, not the kind that are worked out backward from solution to problem, the way the fiction writers must concoct their detective stories.

TROOPERS of the Pennsylvania State Police don't confine themselves to the chasing of bank bandits and the catching of murderers. They are interested in chicken thieves, too, and plunderers of farm crops. Because there are only 300 of them, they cannot run down every petty criminal, but they have done some remarkably effective work against those who prey on country people.

The article on Page 3 is intended to give in a general way the history and organization of the Force. Next week we shall go into more detail about the Troopers' methods of combating crime in rural sections.

THOSE WHO FOLLOW the fair circuits during the fall months will want to clip the table of county fair dates appearing on Page 2. We wonder how many more years it will be until we can also announce the date of the Pennsylvania State Fair.

What an exposition we would have if all the diversified farm products of the Keystone State were properly displayed in a great agricultural exposition. Combine with it an adequate representation of the state's industries and we would have the greatest state fair in the country. It will come eventually, and when it does come it will strengthen every really worth while local and county fair.

THE FIRE in the state printery at Harrisburg destroyed an immense number of valuable papers, among which were thousands of valuable bulletins published by the Department of Agriculture. One of the worst sufferers was Doctor Gress, the State Botanist, whose latest bulletin, "Enjoy but Do Not Destroy Wild Flowers," should do a lot of good in the right hands. Fortunately, many of these important bulletins will be reprinted. Doctor Gress will continue his series of articles in this paper on common poisonous plants of Pennsylvania.

WILL WATCH AND WAIT

Farm Leaders Withhold Judgment on Loan Board—Cotton Exchange Renews Contract.

Washington, D C

THE expected reorganization of the Federal Farm Loan Board has begun. Eugene Meyer, Jr., a New York broker and formerly managing director of the War Finance Corporation, has been appointed Federal Farm Loan Commissioner. George R. Cooksey, a former Washington newspaperman, and Floyd R. Harrison, of Virginia, have been appointed members of the Farm Loan Board, succeeding Edward E. Jones and Robert A. Cooper. Mr. Cooksey, Mr. Harrison and Arthur C. Williams, of Texas, another member of the board, were associated with Mr. Meyer in the War Finance Corporation.

As there are only two other members, Mr. Meyer and his former aids in the War Finance Corporation are in complete control of the Federal Farm Loan Board, with Secretary of the Treasury Andrew W. Mellon general director. The three retiring members resigned by request, having been practically forced off the board.

Will Await Developments

The farm organizations represented in Washington are not making any stand either for or against this change in the Farm Loan Board. They have assumed an attitude of watchful waiting. If thru this reorganization the Farm Loan system is improved they will be ready to support Mr. Meyer. If it is not functioning to their liking when Congress meets in December they will make a united effort to prevent the confirmation by the Senate of the three new appointees. They are willing to give Mr. Meyer an opportunity to show what he can do before commanding or indorsing him.

Extend Credit to Flood Sufferers

Secretary Mellon is preparing to finance the rehabilitation of the Mississippi River flood area with funds of the Intermediate Credit Banks. An agricultural credit corporation is to be organized at Little Rock, Ark., with capitalization at $500,000 to $1,000,000 with loans from the Intermediate Credit Banks on the basis of three times its paid in capital. It is proposed to furnish assistance to the flooded areas in other states by means of agricultural credit corporations.

Cotton Growers Unite

The southern cotton growers are more successful than the western wheat growers in commodity marketing. While the nine wheat pools were unable to get together at their Kansas City meeting on Secretary of Agriculture Jardine's plan for loaning them money to finance a nation-wide overhead pooling project the American Cotton Growers' Exchange at a meeting in Memphis renewed its contract with the state cotton growers' associations for another five years. The Exchange includes all the cotton states from North Carolina to Arizona. It now handles a large proportion of the cotton grown in these states, and if not in a position to dominate prices it can save the growers money by economies in handling the crop and the elimination to some extent of speculation.

Need Trees to Prevent Floods

The Mississippi Valley flood has revived the age-long discussion as to the effect of deforestation on floods. Charles Lathrop Pack, president of the American Tree Association, says we must plant snow-holding and rain-retarding trees at the head waters of our rivers and streams or we will have a counterpart in the Mississippi Valley of the Yellow River which the Chinese call the "river of sorrows." "Forests," he says, "are necessary at the headwaters of streams. The trees break the force of the raindrops, and the forest floor, acting as a sponge, absorbs rainfall and prevents run-off and floods."

The National Geographic Society says the flood stages were lower when forests covered the headwaters of the Mississippi and its tributaries, than now. "Every tree cut, every roof built, every street paved, every drainage ditch dug, and every culvert constructed in the vast area drained by the Mississippi River system has done its bit toward pouring rainfalls more quickly into the great river."—E. E. R.

LAWS TO FIT BUDGET

Acts Passed by Legislature Ready to Go Into Effect—T. B. Indemnity Money Will Be Ready on Time.

Harrisburg, Pa.

WITH the close of the period for acting on bills left by the legislature of 1927, Capitol Hill a few days ago commenced to carry out plans and projects authorized by the general assembly and to contemplate a record in vetoes made by Governor John S. Fisher. It is said the amount of money made available for agricultural purposes, including educational objects, is greater than ever before. Appropriations have been held to a sum not far from that understood to have been set by the budgetary officials. If the amount of road improvement which can be said to be authorized is greater than can be accomplished with means in sight there has at least a figure been set toward which to work. It will take a week or so to get all of the bills worked out and the fire in the state printery will interfere materially with the publication of laws. At the Department of Agriculture arrangements are being made to put into operation certain changes in acts. The money carried by the new appropriation acts becomes available June 1st.

More Aid for Townships

In a few days calculations will be ready showing just how much money will be in hand in the coming two-year period for state aid and township rewards. The authorization by the legislature and approval by the Governor in all probability will give more money than ever, because the motor vehicle fund shows every sign of growing.

Push Cattle Testing Work

According to word given out at the Capitol the new appropriation for payment of indemnity for tubercular cattle will be ready when the operations cared for by present appropriations end. The active manner in which districts in southern and central counties have been signing up for the test has been a cause for comment.

No Township Road Commission

Governor Fisher has vetoed the bill providing for a state commission in charge of township highways. The measure caused some discussion and was designed to create a board of seven. The Governor holds the state Highway Department Organization is ample to take care of the subject.

To Assemble Laws

Immediate steps will be taken by the State Highway authorities to get together all new laws or changes in acts dealing with roads in the smaller municipalities and the townships. The same work will be launched by the Legislative Reference Bureau to assemble the laws regarding townships. The borough code changes have been grouped.

Changes in Boards to Be Made

Numerous changes in membership of state boards in charge of various activities and in control of state institutions are in sight as a result of a change in law which will make such officials' terms coincident with state administrations to a greater extent than ever. There will be many appointments made in June.—T. C.

FROST DANGER GONE

Peach Growers Report Less Damage Than Usual—Junior Calf Clubs Will Hold Exhibit.

Trenton, N. J.

SOUTH and central New Jersey peach orchards are in excellent shape this season for the most part and present indications point to a generous crop. Brown rot on peaches has hit spotted sections, being particularly serious in the immediate Bridgeton area. Frost danger is over and less damage was reported from this source than in some years. Apparently brown rot has not made its appearance in the northern peach counties.

Calf Clubs to Exhibit

Boy and girl members of the junior calf clubs in Hunterdon County are to take part in the Rural School Festival to be held on the county fair grounds at Flemington on May 25th. The County Board of Agriculture and the Dairymen's League have offered cash awards to encourage exhibitions by the young folks. There are prizes offered within each breed, on calves under and over one year old. Both tested and non-tested animals will be eligible for entry in the show this year, but the two groups will be kept entirely separate on the fair grounds.

Paul Bennetch Resigns

The New Jersey State Department of Agriculture announces the resignation of Paul B. Bennetch who for nine years has been its specialist in dairy products. Mr. Bennetch severed his connections to become associated with the Walker-Gordon Farms at Plainsboro, N. J. Mr. Bennetch is one of the best posted milk authorities in the state and he has been active in promoting dairy club work. It is expected that Mr. Bennetch will still be available to act as judge at various cattle shows, as he has been doing in the past.

Asparagus Good Crop

This year continued the pick-up in asparagus, and heavy shipments from central and southern New Jersey were bringing excellent prices to growers up until the first of May when competition from other states depressed the market. Weather has been favorable this year to a large production per acre, spotted intermittently by cold spells which retarded shipment and jumped the price accordingly. Until the last few years poor prices had so depressed asparagus growers that the crop was decidedly on the wane, but this year's returns coupled with several preceding good seasons have replaced the crop in general favor.

Potatoes Now Up

Early potatoes played a winning game with late frosts this season in New Jersey. Warm weather in early May brought the new crop thru the ground just as the last killing frosts expected this season were out of the way. Some apprehension was felt for the crop two weeks ago but growing conditions to date have been excellent and general optimism prevails among potato growers this season.—W. H. B.

SOME FLOWERS THAT THRIVE BEST ON FARM SOIL

WATCH 'EM GROW!

FINDS HANDS TIED

Public Service Commission Can Do Nothing to Lower Freight Rates—Urge Footpaths along Roads.

Ithaca, N. Y.

WHEN milk and cream producers found that freight rates over a certain railroad on shipments wholly within the state were higher than similar interstate shipments they applied to the State Public Service Commission for rectification. The commission found that under present federal laws it had no jurisdiction; also that this railroad company had increased its rates fully 20 per cent since 1920. The Interstate Commerce Commission found that it too is without jurisdiction in the matter, leaving the freight schedules an apparent fixture, and on an unjust basis. The New York State Public Service Commission is now asking the Interstate Commission to restore to it the right to deal with the situation.

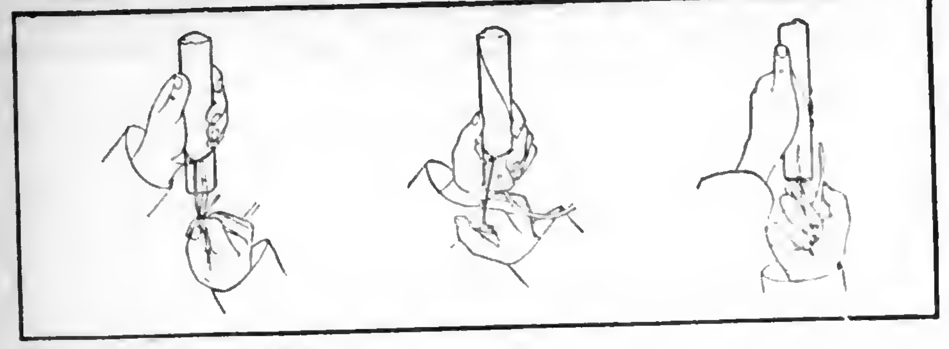
Footpaths for Pedestrians

The old footpath along rural highways went out when paved roads came in. Now the number of vehicles on the roads has increased until pedestrians simply do not belong on the highways and are in great danger if they attempt to use them. Drivers of cars, as well as pedestrians, would be greatly relieved could there be a gravel path for persons on foot. This might be combined with space for horses on the highway at not too great expense if provision is made when the road is constructed.

Beef Prices to Rise

Dr. G. F. Warren, farm economist of Cornell, calls attention to the fact that in the past seven years cattle in the United States have decreased 14 per cent while the population has increased 11 per cent. He believes that higher beef prices are slowly arriving and that they may come to the peak in 1931,—to a point equal to the previous high mark of 1913. In the history of 55 years he finds that it takes eight years to get a supply of beef, and about that time to get rid of a surplus.—M. G. F.

PRIMING



Chapter I. in the

FARMERS' HANDBOOK of EXPLOSIVES

A Standard Practice Text

This coupon will bring you a free copy

FASTENING a detonator or blasting cap to a piece of fuse and inserting it into a stick of dynamite is nowhere near as simple as it sounds. If the work is carelessly or incorrectly done, the best results cannot be expected and the danger of accident is increased.

The first chapter of the "Farmers' Handbook of Explosives" shows how practical blasters prime their charges. Diagrams and photographs illustrate each step of the operation.

Other chapters deal with LOADING AND FIRING, STUMP BLASTING, BOULDER BLASTING, VERTICAL FARMING, TREE PLANTING, DITCHING WITH DYNAMITE, STREAM CORRECTION, LAND DRAINAGE, and MISCELLANEOUS USES OF EXPLOSIVES. All intensely practical, written right out of the everyday experience of blasting experts working under average farm conditions.

A hundred pages of practical knowledge that you'd otherwise have to pay for with years of experience.

"The Farmers' Handbook of Explosives" costs you nothing. The coupon below will bring you your copy in just a day or so

NESHAMINY GARDENS

WHERE AN EDITOR WORKS AND THINKS
BY R. P. KESTER

I PROMISED some weeks ago to report the success of our water system plan at Neshaminy Gardens. Well, it works. The plumbing was completed, the pipe laid and connected, and the engine started. In a very few minutes we had a tank full and a pressure of forty pounds. A two-horse power electric motor will replace the gasoline engine immediately and will be equipped with an automatic switch so that as soon as the pressure gets down to ten pounds it will start pumping, and will "knock off" when it gets to about forty pounds.

◆ ◆ ◆

NOBODY ever plants his own potatoes for seed in our community, but we are trying it this year. We are not making any promises or brags, but we had enough seconds from last year's crop to plant all we want and are going to risk it. They were sound, had kept well and were not fully mature when the tops died. The Cobblers planted two weeks before were from Maine and were as fine, solid seed as we ever planted. We used a 4-8-6 fertilizer on both.

◆ ◆ ◆

THE asparagus is doing nicely but makes growth slowly because of the cool weather. We have made several cuttings and find a ready sale. The long wet fall last year prevented cultivation and the growth of weeds gave us a good bit of extra work this spring, but we have it well in hand.

◆ ◆ ◆

The cabbage plants which we set last week were not as we like to have them. They had not been transplanted, were grown inside a greenhouse and were too long and spindly. But they were all we could get just then. Short, stocky plants are best. The weather since setting them has been favorable and we can tell within a few days whether it was wasted labor or not.

THE 500 Leghorn chicks put in the brooder house on May 2 are getting off to a good start. They are receiving every attention and are being fed and managed according to the advice of the best authorities. When 60 hours old they were given clean water, and, oh, they did drink. Then they were introduced to a chick dry mash of high standing. (the formula will be given later) and they did not stand on ceremony when making its acquaintance. Two days later, feeding scratch feed was begun gradually. During the first three days the dry mash was set before them in enough feeders so that all could get at it and was left in only fifteen or twenty minutes, then removed. Over-feeding and feeding too soon is, we believe, a frequent cause of bowel trouble. Now, the mash is kept before them all the time and scratch feed given three times a day.

◆ ◆ ◆

ONE trouble about raising Golden Bantam sweet corn, or any other kind of yellow corn, anywhere near white varieties is that they mix so readily. Last year we thought we had them planted far enough apart and the plantings well spaced as to time, but still we had some mixing. Customers are finicky about such things.

◆ ◆ ◆

THE septic tank and its system is about completed, all but filling in the ditches. As I wrote before, we got the forms from County Agent Greenawalt and he and Professor Haswell of State College came and gave us the needed advice and instruction. Anyone who has ever had Haswell to help in sanitary drainage work knows that he is a real enthusiast, and that there is nothing perfunctory about his assistance. He knows his business and we followed instructions; hence, we have no fear as to the success of the septic tank system.

The Cheerful Plowman

My Radio

MY NEIGHBORS said, "That thing's a fad, you'll soon grow tired of it, b'dad! The program maker never has a thing on tap but junk and jazz! If he would send some honest stuff, not Cheap John music in the rough then we could see a little sense in handing out your copper pence! That speech was made four years ago when radio was new, you know, and truth to say, in those old days my radio had crazy ways; it did have hiccoughs, heaves, and colds while tunes were frayed and bent in folds! Then, too, as my good neighbors said, the program man was seeing red; he fed me junk of sorry make, all full of wiggle, hop and shake:

That day, however, is no more! It's gone with half its jazz and roar! Today reclining in my chair I hark to music rich and fair! The artists of the highest caste are coming thick and coming fast. Piano, orchestra and drum, in orderly succession come, while whistling solos greet my ear and vocal artists peddle cheer! Then I get lectures on the cow, and hints on cooking cabbage chow; I'm given pointers on my car, I hear about the polar star, I learn how this and that is made, I learn how foreign debts are paid! Why, come to think about it—Land! Most every thing is right at hand! I have the world right by the tail with downhill pull on perfect trail!

It may have been a sort of joke when radio began to croak; my neighbors may have figured right when they recoiled in fear and fright; when they first poked their thumbs at me they may have reckoned right, you see; but I am saying nowadays the time has come for words and praise! I do not know how others feel, but radio, with all its squeal that sometimes yet disturbs the air seems like an answer to a prayer; it brings to me thru all the year things that I never hoped to near!—J. Edw. Tufft.

From the Week's News

THE swollen Mississippi River has flooded some 10,000 square miles of land in the recent floods, a territory about equal to the combined area of New Jersey and Delaware. About half of the flooded area is improved farm land. Cotton is the principal crop affected.

§ § §

SWINE GROWERS of Pennsylvania have until May 31 to enter their promising litters in the 1927 ton litter contest. Owners of litters which reach a weight of 2000 pounds at the age of 180 days will be eligible to the Keystone Ton Litter Club if they observe certain rules which may be obtained from the county agent. Last year there were 114 official ton litters in the state.

§ § §

THE SASKATCHEWAN Egg and Poultry Pool handled 1,199,847 dozens of eggs last year and over 400 tons of poultry. The year's business showed a turnover of more than a half million dollars. The president of the Pool is a farmer's wife, and all but one of the directors are women.

§ § §

LESS THAN HALF as many potatoes were shipped by rail from Pennsylvania points in 1926 as in 1925, according to the State Bureau of Markets. Greater use of motor trucks, and a smaller marketable crop are given as the reasons. Lehigh County shipped 940 carloads, 625 less than in 1925. Potter, the second potato shipping county of the state, loaded 330 cars in 1926, a decrease of 293 cars from the year before.

§ § §

THIRTEEN CARLOADS of artichokes, 119 cars of cauliflower, 50 of peppers, 94 of kale and 168 of spinach were unloaded at Pittsburgh during the first four months of 1927. The steel city unloaded almost as many oranges as potatoes or apples. The carload receipts for the first quarter of the year were: oranges, 928; potatoes, 1044; apples, 1106; cabbage, 410; celery, 462; lettuce, 531; onions, 317; all fruits and vegetables, 5922.

§ § §

NEARLY half of each week's receipts of cattle reach the large stockyards on Monday. This means losses due to the rush at that time. It also means an increase in the cost of marketing, as more extensive facilities are needed to take care of the peak receipts. Shippers are being urged to spread out their shipments over the week.

§ § §

IN 1920 THE PER CAPITA consumption of milk and cream in the United States was 43 gallons. By 1926 it had jumped to 55.3 gallons, according to a survey conducted by the U. S. D. A., local officials and cooperatives and the National Dairy Council. It is estimated that Americans used more than 56 billion pounds of milk and cream last year (56,417,000,000 pounds).

§ § §

DIRECTIONS for making a simple home egg candler may be obtained from the Bureau of Markets, Harrisburg, Pa. Ask for the circular entitled, "Facts Every Consumer Should Know About Eggs."

§ § §

MEMBERS of the Harrisburg Kiwanis Club are sponsoring boys' potato clubs in Dauphin and Perry Counties. Under the guidance of County Agents Burtner and Rothrock, local leaders enrolled 100 members in 10 clubs to be backed in their potato raising venture by more than 100 Kiwanis members.

§ § §

THE ANNUAL FARMERS' FIELD DAY at the Pennsylvania State College will be held this year on Friday, June 17th. A special evening program is scheduled for Thursday for the benefit of those who arrive in State College early.

§ § §

ABOUT 4000 boys and girls will be doing 4-H Club work in Pennsylvania before the end of this year. In 1926 there were 2880 farm boys and girls enrolled in 191 agricultural clubs, and there were 2879 girls working in 235 home economics clubs in the state.

§ § §

THE FARM POPULATION of the United States has decreased 3,000,000 since the 1920 census was taken. It is estimated that the farm population dropped 649,000 persons last year.

Gay Colorful

5 New Features

1. Gray porcelain enameled top. Easily cleaned with a damp cloth. Long service.
2. Gray legs and base shelf. Pleasing color harmony.
3. Satin-black body finish. Does not show dust. Easier to keep clean.
4. Portable oven. Glass door with white enamel frame. Tight triple lock.
5. White porcelain enameled cabinet. Satin-black finish, top shelf and sides. Ends shaped to allow oven to rest on single burner when desired.

Perfection's Newest Oil Stove Outfits . . .

THEY FAIRLY SPARKLE with cheerfulness, these newest Perfection Oil Stoves. With turquoise blue chimneys, dove gray trimming, and satin-black body finish, they will brighten any kitchen!

Smooth gray porcelain enamel tops, a feature women have been wishing for, add to the beauty and convenience of these newest Perfections. They last as long as the stove.

Complete Oil Stove Outfits

The newest Perfections in color come complete with glass-door ovens and glistening white enamel warming cabinets. The ovens are large enough for four pies.

Only in Perfection Stoves can you get the new colors and genuine porcelain enamel tops. Bring your kitchen up-to-date. Reasonably priced. They burn kerosene the safe fuel. See them at any dealer's.

PERFECTION STOVE COMPANY, 7609 Platt Ave., Cleveland, Ohio

PERFECTION
Oil Stoves & Ovens

No smoke, soot, or odor with Perfection long chimney burners.

WARNING: Use only genuine Perfection wicks on Perfection Stoves. *They are stamped with red triangles. Others will cause trouble.*

GRO-MOR GARDEN TRACTOR
— NO WEEDS! —

The GRO-MOR power cultivator does the work of four men with wheel hoes. It saves labor and time. Takes advantage of every hour of growing weather, cultivates your crops until they are fully matured, and makes you first on market.

GRO-MOR is designed by a successful market grower and honestly built. It costs almost nothing to run, and is so simple a boy can operate it. A touch on the handles guides it—no pushing. Tools changed in three minutes. Made to use Planet Jr. tools and seeders.

The GRO-MOR will make more money for you—more quickly and more easily. Write now for descriptive folder and prices.

Garden and Truck Crops

GILBERT S. WATTS, Staff Contributor and Adviser
Logan Spring Farm

Now Is the Time for Nitrates—The July Sag

NOW is the time when 150 to 250 pounds per acre of nitrate of soda broadcast as a top dressing may materially quicken development of lettuce, spinach, early cabbage, and other vegetables. Where soils are deficient in nitrogen, often indicated by slow growth and puny or yellow foliage, nitrate of soda sometimes may be used to advantage even with the root crops or tomatoes.

Careful observation of results will guide one in future applications and it is well to bear in mind that excessive amounts of available nitrogen may be a distinct disadvantage, especially during a rainy period. Root crops and tomatoes may run all to foliage, spinach may become so succulent that it lacks the fibre to hold up until it reaches the consumer, cabbage may grow extremely large and puffy heads may be formed. Apparently a well rounded supply of plant food in which adequate amounts of phosphorus and potash are available tends to offset this tendency.

High Quality May Solve Problem

It is not uncommon for market gardeners to experience a falling off of their receipts in late July or early August, even earlier southward. The edge is off the market for the early crops and sweet corn, celery, eggplants, peppers and even tomatoes have not come into full swing.

A determined effort will do much to straighten out this sag in our income. Bunch beets, carrots, radishes and lettuce of high quality and prime condition are sometimes at a premium during the season mentioned at which time there is often a supply of low quality, over mature vegetables of these kinds. Real early celery may be the answer to the problem. Those of us who do not garden under glass cannot afford to have too many off days or weeks during the short half year in which Nature is kind.

There is more or less of prejudice against "winter onions" based on the idea that they are less mild than onions from spring-planted sets or seeds. The fact remains that the "Egyptian, tree, top-set or winter onion," as it is variously called, makes a very delicious early green onion when grown fast in rich soil. Light hilling will produce a longer white neck. Later when warm weather makes this variety too hot for the consumer's comfort the thing to do is to quit selling those which are left and let them remain for another year.

Uniformity Increases Returns

Many of us are or soon will be marketing bunched vegetables of all sorts. It is very easy to overlook some of the points which are essential to securing top prices when demand is good, or which may make the difference between selling and not being able to sell when markets are flooded.

Wholesalers, retailers, consumers all want securely tied, uniform sized bunches with the individual specimens in each bunch of about one size. Perfectly clean stuff goes many times faster than that which is not properly washed. Colored tape is sometimes an asset and it pays to maintain nearly a standard bunch thruout the season. Quotations then mean something.

Have you ever been told, "Why, I bought beets this morning at fifteen cents less a dozen than you ask." Maybe the other fellow sold too low. More likely his bunches were smaller, more poorly graded or dirtier. In any event, the closer we all come to a standard with any sort of produce the sooner we will realize fuller returns.—G. S. W.

Rambles of a Pennsylvania Fruit Grower

X. Florida Strawberries

AN EASTERN man passing thru an irrigated district of the West for the first time is amazed at the contrast between the arid desert, which seemingly is incapable of producing anything but sagebrush, cacti and greasewood, and the lush verdure of the irrigated land just over the fence. The contrast between the desolate pine woods around Plant City, Florida, and the prosperous berry farms is even more striking.

This is the center of the Florida strawberry industry, with over 1500 acres. The soil is a gray sand of considerable body, with clay subsoil three or four feet below. Good strawberry land, cleared, costs $400 to $1000 an acre. Plants are set from the middle of September thru October, on raised drainage beds two feed wide and ten inches high. Two rows of plants are set, eighteen inches apart, on each bed, the plants nine inches apart in the row. Plants are secured from the north, chiefly from the Chesapeake Bay region; they would not carry over the summer here. Only one variety is grown, the Missionary, which displaced the Klondike fifteen years ago.

Weeds grow happily on the strawberry ridges and the hand hoeing involves considerable expense. Few runners form and none are allowed to set. The fertilizer application, as is usual on Florida sands, is very heavy. Commonly it is two tons per acre of 4-8-4, costing around $100. About 1500 pounds are bedded beneath the plants at setting; the balance is applied in side dressings in two applications.

No fruiting mulch is used now. Formerly the needles of long-leafed pine, called "pine straw" were used, but it was found that the mulch favored damage to the blossoms by frost. A heavy frost this season killed all open blossoms and so set the crop back a month.

Winter strawberries at Plant City, Florida. There are two rows of hill plants on a high drainage ridge. The bed is set in September and bears from Christmas till March.

Price Drops As Season Advances

Plant City berries begin to bear about three months after the plants are set. Berries shipped for the Christmas holiday trade may bring $2.00 a quart but only a few quarts are picked then. The price drops gradually as the season advances until now (March 12) it is fifteen cents. A good average for the season is twenty-five cents.

The cost of production is around twelve cents a quart, according to Charles Johnson, who gave me the following item.

Cost of growing	6 cents
Cost of picking	3 cents
Cost of packing	2 cents
Cost of package	1 cent

If, therefore, the average selling price is around twenty-five cents there should be a profit. Yields of 5000 quarts or more are common. Gross sales of $1000 an acre, which are not unusual, ought to net around $400 an acre. Net profits of over $1000 an acre are reported but these are exceptional.

Negroes Pick Twice a Week

The picking is done by negroes who gather 100 to 125 quarts a day, stooping laboriously over the low ridges. In warm weather the field is picked every other day; in cold weather twice a week. The berries are picked much greener than in the North, always before fully colored and often when only a little color shows. About six crates to the acre are secured at each picking. Picking is continued for three months or until the price drops so low that it does not pay to harvest them. This point is reached at about twelve cents.

As they come from the field the berries are very sandy and are dumped into a tub of water to wash them and packed wet, which is bad for shipping. They are very much over-faced; the beautiful large berries on top are tightly packed and aligned but they are not a fair index of the contents. Sales are made to buyers who represent large distributing houses; there is no local co-operation among growers. Early in the season when pickings are small the berries are shipped in refrigerator chests which hold 100 pounds of ice and seventy quarts of berries. Later they are shipped in refrigerator cars.

Peppers and Corn Follow Crop

The end of the present picking season being at hand the growers are busy setting a row of tomatoes or peppers on one side of each ridge, one row of strawberries will be plowed down and the other hoed under. Some plant a row of field corn between the peppers or tomatoes. These two crops are profitable but not as much so as the strawberries. After they are off, the field is allowed to grow up to grass and other weeds which get waist high, so that there is no lack of vegetable matter to put back into the soil. The land goes into strawberries again in the fall. A good grower should net $800 an acre from the two crops.

Years ago I read an interesting book by Streeter entitled "Ten Acres Enough." That is hardly a safe statement to make, as a generalization, but it works out pretty well at Plant City.—S. W. Fletcher.

Cheaper— what do you mean?

BY A THRIFTY FARMER

"Take binder twine. I used to think some twines were cheaper just because they cost a cent or two less per pound. Did I add the grief—knots—snarls—loose bundles and even short length that always went with the cheaper twine? Not on your life! The immediate prospect of saving a few cents was all I considered.

"Two years ago my dealer suggested Plymouth twine. 'A little more expensive' he said, 'But it sure does give results.' One trial sold me on Plymouth. It gave me 100% return on my money and proved the best is cheapest.

Plymouth gives more length per pound

"I find Plymouth always runs the average length *guaranteed on the tag.** And from past experience, that's more than I can say for many twines in spite of their printed tag statements.

"If you stop to figure it, some twine may seem to cost a few cents less, but when the eight pound ball runs about 450 ft. shorter than Plymouth twine there is no saving in buying it.

No grief with Plymouth

"Plymouth's superiority doesn't stop with greater length. It doesn't tangle or snarl in the twine can. It doesn't break—because, it's free of knots and uneven spots.

"If you asked me now—'what do you mean by a cheap twine?' I'd say 'Plymouth is the cheapest and the best twine on the market.' You can always count on complete satisfaction when you use Plymouth."

*Plymouth Twine is spun 500, 550, 600 and 650 feet to the pound. Look for guaranteed length on tag.

Plymouth—more economical:
the six-point binder twine

1. It's longer—full length to the pound as guaranteed on the tag;
2. It's stronger—less breaking, less wasted time, less wasted grain;
3. It's evener—no thick or thin spots—no "grief";
4. It's better wound—no tangling;
5. It's insect-repelling—you can tell by its smell;
6. It's mistake-proof—printed ball—and instruction slip in every bale.

Do you know about
PLYMOUTH
"GOLD MEDAL"
The Wonder Twine
30% longer than Standard

You can easily test Plymouth's length per pound against any other twine. The experiment pictured at the left has been made frequently.
Take a ball of Plymouth and any twine of the same weight and tagged as being the same length per pound and unwind them down the road. Then measure the length. Plymouth twine wins out—7% to 16% longer than cheaper twines.

3. **83.27%** of the users report average saving of 2 hrs., 12 mins. per day.*
4. **97.13%** of the users say it agrees with their cows.*
5. **99.4%** of the users say they get as much or more milk as by hand milking.*
6. **9.49%** average increase in production per cow reported by those who have records.*
7. **94.80%** of users say their De Laval is easy to keep in a clean and sanitary condition.*
8. Average bacteria count of all reporting, **16,542**—**62%** report counts of 10,000 and less.*
9. **96.45%** of De Laval users say their milker is "the best," "one of the best," or a "good" investment.*

*Based on reports from 1844 De Laval Milker users in all parts of the U. S. and Canada.

650,000 Cows Prove the Value of the De Laval Milker

MORE than 650,000 cows in every dairy section of the world are offered as living proof of the superiority of the De Laval Milker. Twice each day these cows feel the regular stimulating action of the Milker and twice each day their owners are more firmly convinced that "The Better Way of Milking" is an absolute necessity.

The users of the De Laval Milker find their work easier and pleasanter, they have more time for recreation and for other work, they do not require so much help and they are able to produce more and cleaner milk. Their cows are milked regularly and correctly day after day, and they enjoy the greater profits.

Sold on easy terms. See your De Laval Agent or write for full information.

Pennsylvania State College

Students' Show and Association Meeting Attract Dairymen

(Continued from page 2)

glimpses of dairying in other countries. Mr. Watts has just recently returned from a trip around the world and his observations were of much interest and value. The program was completed by a play entitled, "Judge for Yourself," which was staged by the Philadelphia Dairy Council and was both humorous and instructive.

College Creamery Inspected

The first event on Saturday morning was a tour of the School of Agriculture. The College Creamery was inspected. This plant is operated as a cooperative creamery and is patronized by more than 300 farmers living in the State College community. The raw materials are used for instruction purposes in the handling of milk and cream and in the manufacture of butter, cheese, ice cream, condensed milk and other dairy products. Exceptional opportunities are afforded for instruction in dairy manufacturing since the creamery operates regularly thruout the year.

The fertilizer experiments which had been in progress for forty-six years were next inspected, then the poultry plant. The Poultry Department is trying out a plan of raising chickens to maturity without having them come into contact with the soil. This is done to avoid difficulties with intestinal parasites.

The dairy herd presented some interesting lessons. Constant records of production and feed eaten have been kept on every cow in the herd since it was established in 1889. Experiments on some of the feeding trials show that corn-soy bean silage is but little superior to straight corn silage, sunflower silage is greatly inferior to corn silage; oats and peas make a good summer silage; red clover can be successfully ensiled; soy beans are equivalent to alfalfa hay for milk production, while red clover is inferior to alfalfa hay.

Calves can be grown successfully with dried skimmilk powder and a grain mixture after they have reached four weeks of age.

The events of the day closed with a big dairy banquet in the evening attended by about 175 persons. At this event, the various medals, prizes and silver cups for the winners in the various contests were awarded. The speakers included President R. D. Hetzel, Dean R. L. Watts, Professor A. A. Borland, M. D. Munn, president of the National Dairy Council, and C. G. Jordan, Secretary of Agriculture, Harrisburg, Pa.

(Continued on next page)

Juniata C.T.A. Finishes Fourth Year's Work

> Editors' Note.—This is one of a series of annual reports of Pennsylvania cow testing associations. As each association completes its fiscal year a summary of its records is published in this department. The owners of herds with a 300-pound butterfat average, whose names appear at the end of the report, will be awarded prize ribbons by the Pennsylvania Dairymen's Association at the 1928 State Farm Products Show.

THE Juniata Cow Testing Association finished its fourth year April 1, 1927, with 26 whole-year members. There were 355 cows in the Association during all or part of the year.

The result for the four years' testing is as follows:

Year	Average no. cows	Lbs. milk	Lbs. butterfat
1924	278.00	8860	303.4
1925	260.66	8672	304.7
1926	294.16	8821	309.1
1927	290.76	9000	310.1

The results for the year follow:

Total average number of cows in the association	290.76
Avge. per cow: lbs. of milk	9000
Pounds of butterfat	310.1
Percentage of butterfat	3.4
Value of product	$214.20
Cost of pasture	15.21
Cost of roughage	32.07
Cost of grain	49.67
Total cost of feed	96.95
Value of product above cost of feed	117.33
Returns for $1 expended for feed	2.21

Five cows in the association produced more than 500 pounds of butterfat, 29 produced from 400 to 500 pounds, and 97 from 300 to 400 pounds, making a total of 131 cows with records of more than 300 pounds of butterfat for the year.

Cow Tester in charge, Isaac S. Reist; County Agent, D. R. Pheasant; summary compiled by I. O. Sidelmann.

Seventeen herds with an average of five or more cows exceeded an average production of 300 pounds of butterfat. A complete list of these herds follows:

Owner	Avge no. cows	Breed	Pounds milk	Pounds Fat
E. J. Cunningham & Son, Mifflintown	12.58	R. & G. H.	12,642	439.0
C. I. Degen & Son, Mifflintown	8.75	R. & G. H.	10,836	383.7
Carl L. Smith, McAlisterville	12.75	R. & G. H.	10,546	376.4
T. R. Auker, Mifflintown	10.50	R. H.	11,636	374.2
Theorous Kauffman, Mifflintown	15.17	R. & G. H.	11,216	364.8
J. W. Seiber, McAlisterville	7.83	R. & G. H.	10,654	363.0
C. D. Stouffer, Port Royal	13.58	G. H.	11,132	360.2
E. E. Beale, Port Royal	8.25	R. & G. H.	10,257	349.3
C. A. Musser, Oakland Mills	8.42	R. & G. H.	9854	345.4
Earl A. Fettig, Mifflintown	12.50	R. & G. H.	9845	344.7
John F. Nace, McAlisterville	6.25	R. & G. H.	9751	331.7
J. I. Clarke, Port Royal	11.83	G. H.	8746	328.6
W. E. McMeen, Port Royal	11.42	R. H.	9281	313.3
George Colyer, Mifflintown	10.00	R. & G. H.	8947	310.4
H. E. Groninger, Port Royal	14.92	R. & G. H.	8179	306.4
E. G. Ferguson, Millerstown	7.50	R. & G. H.	7757	305.3
G. Lloyd Heckman, Mifflintown	8.00	R. & G. H.	10,055	303.8

Mr. Munn stressed the national importance of the dairy industry and agriculture in general. He suggested that agriculture should be dignified in our city schools because over ninety per cent of our food supply comes, either directly or indirectly, from the soil.

While admitting that he was a feeder of baby beef himself on his Lawrence County farm and confessing that he owed his aversion to dairying to the harsh treatment accorded by a switching cow assigned to him for milking in his early youth, Secretary Jordan, nevertheless, emphasized the importance of dairying in Pennsylvania. Already one of the greatest dairy states in the Union, the Secretary predicted that it will become still more outstanding in its dairy achievements. Soil, climate and markets were listed as factors contributing to the ever-growing dairy industry of the Keystone State.

Doctor Jordan prophesied that within six years Pennsylvania would be free from tuberculosis in its dairy herds if the dairymen of the state cooperate and adequate appropriations are made for the work. He also promised his hearty cooperation in eradicating contagious abortion from Pennsylvania herds.

Two Groups Contested

The student contests at the Penn State Dairy Exposition included the judging of butter, cheese, market milk and ice cream. The contestants were divided into two groups according to their experience.

In Group A, which included those having previous experience in judging, L. D. Zern, of Norristown, was first in butter judging; C. H. Minster, of Altoona, first in cheese judging; A. W. Cubbon, of Oil City, first in ice cream judging, and C. L. Zook, of Pittsburgh, first in milk judging. In high average score for the judging of all products, A. W. Cubbon, of Oil City, was first, and C. L. Zook, of Pittsburgh was second.

In Group B, which included those without previous experience, the butter judging contest was won by L. L. Saphore, of New Germantown; the cheese judging, T. R. Moyer, Chalfont; the ice cream judging, C. L. Cooley, Nicholson, and milk judging, E. S. Fisle, Easton. In high average score for judging of all products, L. S. Cooley was first and T. R. Moyer, second. Forty-one contestants engaged in the contest.

Harrisburg Man Produced Clean Milk

The Clean Milk Production Contest included twenty students. Each one had to do the milking, straining, bottling and all other features of producing milk. The man who produced the milk of lowest bacterial count won the contest. First prize went to J. M. Stazewski, Harrisburg; second to L. E. Goodenough, Coudersport, and third to E. Heyser, Norristown; fourth to R. R. Peters, Philipsburg, and fifth to P. P. Pecora, Hazelton.

The dairy cattle judging contest aroused much interest. Twenty-six students had a part in it. To be able to select a good cow is no small accomplishment in these days when so much emphasis is placed on production and on type. First prize in judging Holsteins went to T. H. Patton, New Castle; first in Guernseys to B. C. Denny, Waynesburg; firsts in Ayrshires to R. R. Wilkinson, Wellsboro, and first in Jerseys to M. C. Scepansky, Morton, Pa. The grand champion judge for all breeds was H. F. Fox, Cabot, Pennsylvania.

Dairy Fitting Proved Most Interesting

Perhaps the most interesting contest of all was the dairy cattle fitting contest. The students had been working diligently since Easter in fitting up the cattle in the college dairy herd which includes 125 animals. The attractive appearance of the animals would have done credit to professional fitters at the National Dairy Show.

In Ayrshires, W. D. Johnston, of Howard, was the breed championship fitter; in Holsteins, R. F. Mollenauer, of Eighty-four; in Jerseys, Minor Day, of Tamaqua, and in Guernseys, A. C. Hug, of Germania. The grand championship for all breeds was won by A. C. Hug, Germania. W. D. Johnston, of Howard, being second and R. F. Mollenauer, Eighty-four, third.

The dairy cattle showing contest was also of much interest, there being thirty-seven entries. R. F. Mollenauer, of Eighty-four, won the grand championship honors in this contest, followed by H. R. Larson, Ridgway; Clark Bowen, of Wellsboro, and F. W. Morrow, of Camptown. Mollenauer's entry was a yearling Holstein heifer and he had her so well trained that she moved about like a little princess.—B.

Greater { Performance Roominess Long Life

Prove CHRYSLER "50"

Greater Value

In its truly extraordinary results Walter P. Chrysler and his corps of engineers gave the public something immediate, something convincing, something final and conclusive with which to measure Chrysler "50" against and above anything around its class—either in six or four cylinders.

From its very introduction Chrysler "50" has won overwhelming public acceptance for what it was designed and built to be—the giant of its class in Standardized Quality, outstanding performance, full family size, complete appointment and every essential that makes for indisputable value.

50 and more miles an hour.
5 to 25 miles in 8 seconds.
25 miles to the gallon.
Full-sized with ample seating capacity for all passengers.
Mohair plush upholstery.
Chrysler smartness and beauty.

Coupe, (Genuine-leather upholstery) $750; Coach, $780; Roadster, (with rumble seat) $795; Sedan, $830; Landau Sedan, $885; f. o. b. Detroit, subject to current Federal excise tax.

Chrysler dealers are in a position to extend the convenience of time payments. Ask about Chrysler's attractive plan.

All Chrysler cars are protected against theft under the Fedco System of numbering.

$750 and upwards, f. o. b. Detroit

Are You Hiding a Skeleton?

Many a Closet Harbors Articles No Longer Used

HOW often shall we clean the clothespress? Too often it seems we go thru all the spring and fall cleaning orgies without really cleaning these mysterious chambers at all. Everything goes out into the air for a sunning, and returns to the closet once more to help make an accumulation of the years. For it is hard and seemingly extravagant to discard a perfectly good garment because one no longer wears it.

Aunt Jane is the only woman member of the board of directors in her town and everyone who has seen her struggle thru the years, raising and educating her family in the face of many adversities, agrees that she is a fine manager. But how often I have heard my cousins, who are now grown up, declare "Mamma never throws away anything!" For Aunt Jane has a collection that includes everything from confetti to walnuts, and clothing that covers a period of time from Aunt Jane's own schooldays to the present.

Clean closets filled with only those garments used from day to day hold little attraction for moths.

One particular closet of Aunt Jane's took a firm grip on my imagination years ago. The hattery, we used to call it, because of the stacks of hat boxes. There were so many of these that usually they tumbled down on us pell-mell when we opened the door. As children how we loved to delve in the dusty boxes, bringing this and that bonnet to light!

But that was years ago. All the modern principles of good housekeeping insist that we shall keep in our clothespresses only those garments in use from day to day.

Need More Attention in Summer

Closets usually are cleaned spring and fall and watched closely for moths,—and in this respect they need more careful attention in summer than in winter. When the walls are painted they may be washed down thoroly on the same day on which the clothes are on the line airing. Remember to hang those garments that fade in the shade and those that do not in the cleansing sunlight.

Everything can be dry cleaned, washed or brushed. Don't put a single soiled garment back into the closet and put back only those which you wear from day to day. Another good suggestion is this: remember to leave clothespress doors open occasionally and one or more windows to allow for a good circulation of air. Then if the clothespress contains nothing but clean clothes you will not have to use some disinfectant or your favorite moth preventive. Such closets have no mothy secrets to tell.

Get rid of everything you will never wear again! The Salvation Army will call for old garments, or if you must realize on these for the sake of economy, there is the classified ad or the ragman. Rags bring so much better prices than paper and yet that thrifty housekeeper who sells all her old newspapers and magazines probably has stored away all her old clothes for years, until she has an attic full of rags.

The classified ad is a much neglected avenue of revenue with regard to clothing of a past season. It is particularly ideal, also, because thru its agency we soon learn to realize that we must sell last year's garments at once before the depreciation of another season sets in. Closet space will never be at a premium, when one has learned the value of second-hand clothing.

The Old Coat Helps Buy the New

A friend of mine showed me her new coat. It was much nicer than any I had seen that season, and she explained to me she had been able to pay more for it than she usually did by selling her two-seasons-ago coat and putting the amount this brought toward the new one. She does not believe in second-bests, and tho she pays more for her clothes than some of us do, she does not actually spend more money, and she is better dressed all of the time. If you belong to a club or society, it is great fun and works to everyone's advantage to have an auction or second-hand clothing sale once or twice a year, that you may rid yourself of undesirables and acquire things that you need or like more.

Discard with a Purpose

Nowadays with great zest we dive into the clothespress, from day to day playing a game of rapid-fire decisions to launder this, dye that, or throw those old garments into the rag bag, with purpose strong to weed out all garments of mere sentimental attachment, or at least to turn these to some practical or constructive use.

The modern clothespress prefers to be like the modern girl—having no need for secrets—and if you keep in the clothespress only those garments you are constantly wearing there will be no skeletons therein with their tell-tale scandal of the kind of housekeeper you really are. —Olga Clark, N. Y.

A New Service for Our Readers

A FEW weeks in the Rockies is a thrilling experience, filled with many interesting and unusual incidents. One day, while exploring a long-abandoned mining camp in the mountains, we found hidden away in an obscure corner of one of the cabins a store of dried leaves, stacked neatly, but one variety on each pile.

A druggist in the party identified several leaves and stems from which expensive medicines are secured, and immediately we all agreed that the collection must belong to an old mountaineer living not far distant. When we saw him that evening he had a good laugh over our find and our ideas. Imagine our surprise when he told us that we had discovered the cupboard of a mountain rat!

All summer long that intelligent fellow gathers and hoards what he will need for the winter. Do we human folk use as much wisdom? Do we harvest and can and store the foods at hand for the winter's supply? Many do, but many do not. Some are afraid. I have just answered a letter which requested, "Please send me all the canning helps you know. I want to put up fruits and vegetables but have such terrible luck. Canning is my 'Jonah'."

Canning Secrets Told

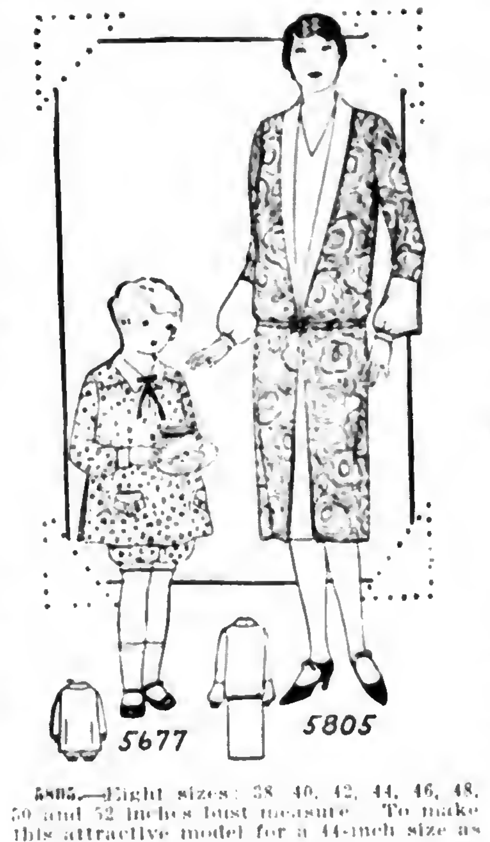
To assist our readers with canning problems we have prepared a leaflet outlining the "Secrets of Canning." This is the first of a series of leaflets on various subjects to help farm homemakers. All will be of uniform size so that they may be compiled and kept in book form. We can furnish you with an imitation leather loose-leaf cover to fit them for seventy-five cents.

This leaflet, "Secrets of Canning," is free to every reader who sends a stamped, self-addressed envelope. If you wish the cover also, be sure to enclose seventy-five cents with your request. Send all orders to Household Department, PENNSYLVANIA FARMER, 261 South Third Street, Philadelphia, Pa.—G. S. S.

For Mother and Daughter

Directions for Ordering.—Give figure or figures of each pattern exactly as printed at beginning of each description. Give bust measure when ordering waist patterns, waist measure for skirt, and age for children's patterns. Address Pennsylvania Farmer, 261 S. Third Street, Philadelphia, Pa.

5677.—Five sizes 2, 3, 4, 5 and 6 years. A 4-year size requires 2¼ yards of 36-inch material together with ¼ yard of contrasting material for facing on collar, cuffs and pockets. Pattern, 10 cents.



5805.—Eight sizes: 38, 40, 42, 44, 46, 48, 50 and 52 inches bust measure. To make this attractive model for a 44-inch size as illustrated will require 3½ yards of 40-inch figured silk together with 1¼ yard of contrasting material and 1½ yard of 32-inch lining for the underbody. The width of the dress at lower edge is 1¼ yard. Pattern, 10 cents.

Send 10c in silver or stamps for our up-to-date spring and summer 1927 Book of Fashions.

The Library Offers Another Book

THE newest book in our library is "101 New Ways for Women to Make Money." A brand new book has a distinct charm always, and with such a title the appeal is irresistible. Every one of you who has a yearning for pin money can be helped to find a "way" by reading this volume. Every woman with a "hobby" can learn to ride it to distinct advantage by following the advice of Miss Leigh, the clever author. She is a business woman of wide experience, and gives many dollars-and-cents ideas to help you start a bank account.

You may borrow this splendid book by sending 15 cents to cover mailing charges. Other books which may be obtained in the same way are Home Handicraft for Boys (Mother, too), Child Training, Cooking for Profit, Feeding the Family, Your Child Today and Tomorrow, More Baskets and How to Make Them, Getting Ready to Be a Mother, and The Woman of Forty.

Just Ten Days More!

THE Sunny Monday Contest closes June 1—just ten days from now. That will give you time to write us your laundry secrets if you have not already done so. There are so many helpful ideas and plans on the Contest Editor's desk already that we know there is an item of help for every reader.

Do not forget to send us on a separate sheet of paper the names of your laundry conveniences. Keep your story under 300 words, using but one side of your paper. Mark your first sheet in the upper left-hand corner with your name and address. Send your letter to SUNNY MONDAY CONTEST EDITOR, PENNSYLVANIA FARMER, 261 S. Third St., Philadelphia, Pa.

For the very best letter—the prize is $10.00.

For the next best letter—$5.00.

For all other letters published—$1.00 each.

Planned for Easy Care

PLANT your garden in rows and plant your rows far enough apart that a horse cultivator can dislodge the many weeds and stir the soil, hastening growth. You can then follow after and with ease uproot the few remaining weeds and uncover all plants that were given a little earth bath. This method is thoro, the work is quickly done and better done.

A good garden is half the living. Vegetables can be raised for daily use during the summer and to fill many jars and the storage cellar for winter use.

Flower seeds of quick growing varities help to brighten the garden and add pleasure for the gardener. Light, graceful poppies take but little space and are so pretty scattered here and there among the rows of vegetables.

Don't forget that you must work in a garden, a bit each day, if you want to reap real benefits. Weeds must be conquered, and the soil needs constant stirring if plants are to do their best. It is a joy to watch things grow. Plant your garden now, work it every day all spring and summer, and enjoy it all thru the year.—Clarice Raymond, N. Y.

Lead me to P. A. every time

I KNOW what I like in a smoke, and what I like is Prince Albert! Why, the minute breakfast is over, I reach for my pipe and the well-known tidy red tin, and we're off . . . off on one of the grandest smoke-joy-rides a man ever took. It's like that all day long.

You understand my enthusiasm the instant you open a tin of Prince Albert and drink-in that wonderful P. A. aroma. You're reminded of a trek through the woods, when the dew is on the leaves and the sun is on the up. Fragrant promise of a glorious taste to come.

Then you load up and light up. You notice that the smoke is equally fragrant . . . fragrant and refreshing. It pours over your tongue in a cooling torrent that knows no bite or sting. Mild, too, with a mildness that says: "Come and get it." I'm talking about P. A.!

I have tried to give you a snapshot of the joys that await you in a pipe packed with Prince Albert. If the picture isn't clear, blame *me*. The complete story is in the tidy red tin at the nearest tobacco-shop. The only way you'll really know P. A. is to *smoke* it.

P. A. is sold everywhere in tidy red tins, pound and half-pound tin humidors, and pound crystal-glass humidors with sponge-moistener top. And always with every bit of bite and parch removed by the Prince Albert process.

PRINCE ALBERT

—no other tobacco is like it!

SHERWIN-WILLIAMS HOUSE PAINT

There's a *joker* in the *cheap* paint can!

WHEN you are tempted by a "low price" and alluring promises to use "cheap" paint on your house—*STOP!* There's a joker in every can. It may *look* like paint. It may *smell* like paint. But before you buy remember this:

If the Sherwin-Williams Company with its years of experience—its skilled paint experts—its great laboratories—its enormous volume—cannot produce *high grade* house paint to sell at less than SWP prices—*no one in the world can do it.*

So whenever you see a "low price" on house paint you can decide that it is made of inferior or skimpy materials. And a *poor paint* is the most *costly* paint you can put on your house.

Let the "formula" prove it

There is one way to prove that a "low price" house paint is merely an inferior paint. Insist upon seeing the formula, either on the can or in the literature. Then compare it with the formula of fine old SWP which you will always find openly printed on every can. Note the big percentage of *White Lead Carbonate* and *White Lead Sulphate* used in SWP Outside Gloss White. White lead should be the *basic* ingredient of all white paint and light tints. It is to these paints exactly what flour is to bread.

See how much less of this basic ingredient is used in the average "cheap" white paint.

Zinc oxide, another costly pigment, is the next essential ingredient. A liberal percentage of zinc oxide combined with a large amount of white lead makes for a *balanced formula*—such as the formula of SWP Outside Gloss White House Paint. It assures a finish of superior wearing quality.

More than 90% of the pigment content of SWP Outside Gloss White is made up of these two important ingredients—white lead and zinc oxide.

In the majority of "cheap" white paints you will find only 50%, sometimes even *less.*

SWP COVERS 360 SQ. FEET PER GALLON (2 COATS)

CHEAP PAINT COVERS ONLY 250 SQ. FEET PER GALLON (2 COATS)

Prepared house paint—*at its best*

It is the liberal quantity of this expensive basic material in every can of SWP Outside Gloss White that gives this fine old paint its remarkable covering capacity.

In the darker colors like browns and greens, the "*balanced formula*" of SWP is even more important.

Naturally, these dark colors can contain little, if any, opaque white pigment such as white lead or zinc oxide.

Sherwin-Williams have the pick of the world's colors. Sherwin-Williams Dry Color Works produce practically everything except the natural earth and mineral colors.

That is why beautiful SWP colors are so rich, so permanent and so true to character.

Greater durability of the paint film on your house is assured by SWP due to the use of a specially treated, pure linseed oil—made in Sherwin-Williams' own linseed oil plant.

Why SWP *costs you less*

One evidence of quality in a house paint is the way it *hides the surface* and in the *area it covers.*

A gallon of fine old SWP will properly cover 360 square feet (two coats).

A gallon of "cheap" paint will cover *only 250 square feet* (two coats)—110 square feet (two coats) *less* than SWP House Paint.

That is one side of the joker in the "cheap" paint can.

Where only seven gallons of SWP will finish the average house, *eleven* gallons of "low price" paint are needed.

SWP costs more per gallon. But it covers *44 per cent more area.* So it costs no more than *cheap* paint by the job. Which would you rather use?

THERE IS 220 SQ. FEET OF PAINT LEFT IN THE *SWP* GALLON CAN WHEN THE "*CHEAP*" PAINT CAN IS EMPTY

Being made of best quality materials, SWP dries to a tough, elastic, glossy finish.

There is no chipping, cracking or peeling. It weathers slowly. Lasts usually for five years.

When repainting *is* needed, you save paint, time and money *because the SWP surface is in proper condition.*

A "cheap" paint frequently chips, cracks, peels and fades in a year or so. It gives an inferior finish—and a much shorter life than good paint.

Repainting is more frequent and costs more for paint and labor because the old paint has to be burnt or scraped off.

That is the *other side* of the *joker* in the "cheap" paint can.

SWP *beauty!*

With fine old SWP you always get a beautiful paint job. Your house looks like new. The colors are especially rich—with a sheen like fine old pottery. And they are weather-fast—slow to fade.

Even after several years of exposure, a washing with plain soap and water will bring out their beauty almost like new.

Contrast this with cheap colors that look dull and wishy-washy almost in no time.

Which would you rather have—when SWP is guaranteed to cost less per job and much less per year?

See "Paint Headquarters" and save money

These are facts which every property owner has a right to know about house paint. They are attested by a concern whose standing we do not believe any man would question. The simplest way to prove them is to make the comparison suggested.

SWP House Paint is sold the world over. Each Sherwin-Williams dealer is "Paint Headquarters" in his vicinity. See the one near you. Before you let any low price blind your better judgment, get his advice. Compare formulas. Don't be fooled. If you want literature, color cards, help on a color scheme or the famous Household Painting Guide, write us.

SWP

Guaranty of Satisfaction

SWP House Paint, when thoroughly stirred and applied according to directions, is hereby guaranteed to cover more surface, to look better, to last longer and cost less per job and per year than any house paint on the market.

Because of the utter security this new way provides, it is widely urged by physicians—ABSOLUTE SECURITY, plus freedom forever from the embarrassing problem of disposal

A free test offered—mail the coupon

By ELLEN J. BUCKLAND, *Registered Nurse*

SIXTY per cent of many of the commoner ailments of women, according to some medical authorities, are due to the use of unsanitary, makeshift ways in meeting woman's most distressing hygienic problem.

For that reason, this new way is widely urged today. Especially in the important days of adolescence. On medical advice, thousands thus started first to employ it. Then found, besides, protection, security and peace-of-mind unknown before. Modern mothers thus advise their daughters—for health's sake and immaculacy.

You owe it to yourself, your daughter, to learn of this new way. A free sample will be sent you, in plain envelope, if you mail the coupon.

Kotex—what it does

Unknown a few years ago, 8 in every 10 women in the better walks of life have discarded the insecure "sanitary pads" of yesterday and adopted Kotex.

Filled with Cellucotton wadding, the world's super-absorbent, Kotex absorbs 16 times its own weight in moisture. It is 5 times as absorbent as cotton.

It discards easily as tissue. No laundry—no embarrassment of disposal.

It also thoroughly deodorizes, and thus ends *all* fear of offending.

Only Kotex itself is "like" Kotex

See that you get the genuine Kotex. It is the *only* pad embodying the super-absorbent Cellucotton wadding. It is the *only* napkin made by this company. Only Kotex is "like" Kotex.

You can obtain Kotex at better drug and department stores everywhere, without hesitancy, simply by saying "Kotex." Comes in sanitary sealed packages of 12 in two sizes: the Regular and Kotex-Super.

Today mail the coupon for a full-sized sample of Kotex, *free*. Note the improvement, mental and physical, this new way brings. Important booklet on "Personal Hygiene" will be sent also, both in plain envelope. Send for your sample today.

TEXT CUT OFF

Request Brought a Surprise and a Treat

WHEN the Home Page Editor requested the recipe for Shoo-Fly Pie, the joke was on her, for she actually thought here was an old-fashioned idea for helping to thin out or even exterminate the winged pests thru feeding them a poisoned pie. Answers came in abundantly and we thank all who offered to help. The first response was read, and no ingredient even hinted at a death blow to flies. The next mail brought many more, all similar. This we have learned is a delicious pastry for mere men. If you have any doubt, try this recipe which the donor's grandmother brought home from the Centennial Exposition in 1876.—G. S. S.

SHOO-FLY PIE

Line four baking pans with your favorite pastry, making it rather short. Blend into nice even crumbs:

3 cups flour
1 cup sugar
½ cup lard
1 teaspoon baking powder

In another bowl, mix:

1 cup molasses
1 cup boiling water
1 teaspoon baking soda dissolved in a little vinegar

Scatter about half the crumbs into your unbaked pastry shells. Pour over them the liquid mixture. Then scatter the remaining crumbs over the top. Bake in a moderate oven.—Mrs. Edward C. Fitzgerald, Pa.

Note: The variations of this recipe which the many letters offer are in the sugar, shortening and molasses. Some insist on granulated sugar, others brown; some write baking molasses, others table syrup; some use butter, others lard. This gives all innocents a good opportunity for testing again and again.—G. S. S.

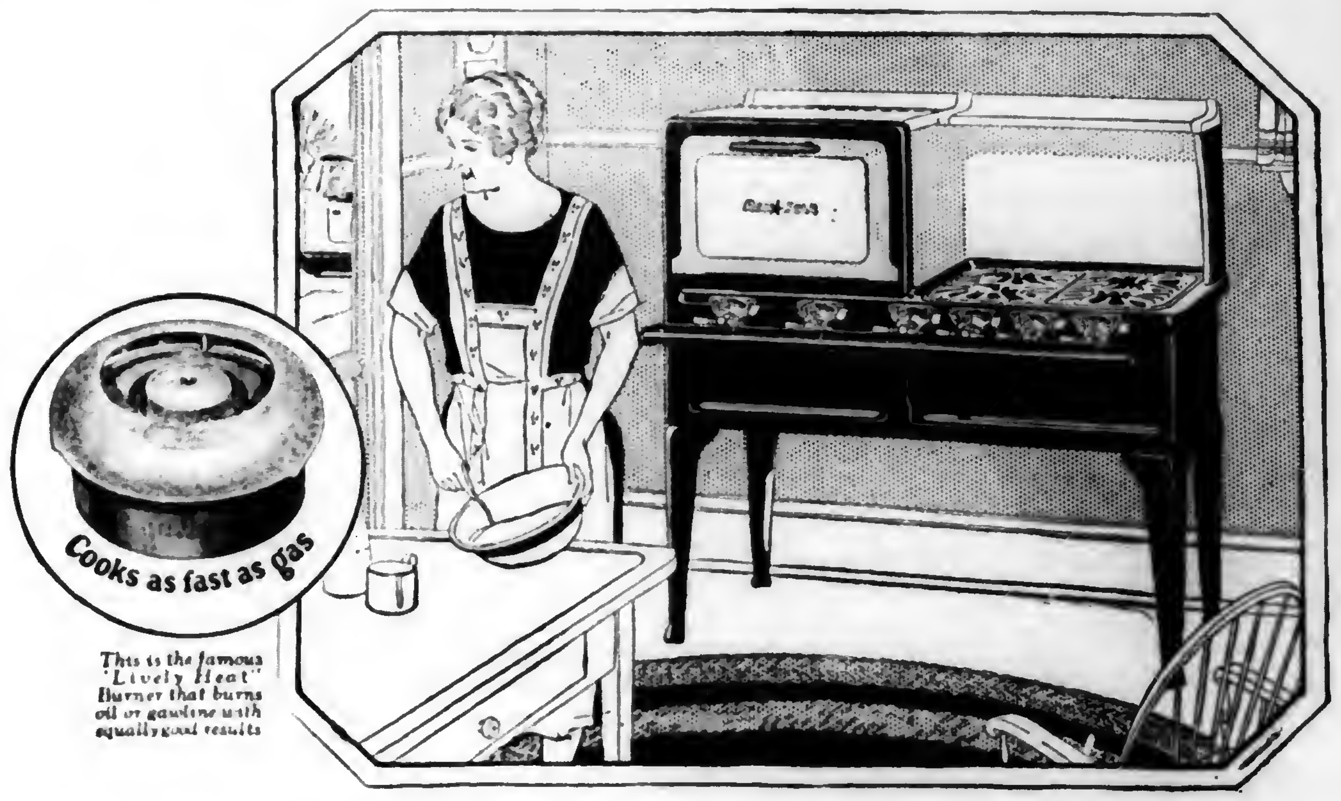
No Child is Too Young for Kindness

ALMOST every woman today shrinks from the sight of a cruel driver beating his horse and from seeing the kicks and blows often given dogs and cats. Yet hundreds of good mothers thoughtlessly teach their children cruelty in the cradle. Have you not seen a mother spank a rag doll or punish an inanimate object over which the baby has fallen, in order to distract the mind of the baby from its hurt? What can we expect of that child when it grows up, but that it will revenge itself upon anyone that annoys it?

Is it not just as easy to teach a child kindness and sympathy? If the baby falls over something, instill politeness and consideration into his plastic mind by teaching him to apologize. He will be quite as much amused and distracted if you say "Excuse me for my awkwardness, I hope I did not hurt you."

"Kindness is an element of character born of sympathy and feeling that resents meanness and selfishness and prompts you to speak and act for the comfort and happiness of living things." "Mercy is the super element in human character which prompts you to rise above inclination or adverse judgments on the error of misconduct of another and leads you to be considerate and forgiving and inspired with the spirit of kindness." "Justice is that quality of human consciousness which causes you to resent any act of unfairness, meanness or cruelty." You may think of justice as a punishment, an offense, but in the building of your character you want to be concerned about justice before the offense is committed. Also remember that punishment for justice should be helpful both for the offender and the offended. The highest justice is tempered with mercy.—M. M. E., Pa.

THE RED STAR OIL STOVE BURNS OIL OR GASOLINE



Cooks as fast as gas

This is the famous "Lively Heat" Burner that burns oil or gasoline with equally good results

"For eleven years it has cooked for family of six"—says Mrs. S. R. Parks, Greenwood, Nebraska

Dear Sirs: "I have had my Red Star Detroit Vapor Oil Stove eleven years and it is just as good today as it was when I first got it. This stove burns either kerosene or gasoline. It has no wicks of any kind to need trimming and make extra expense.

"The wonderful 'Lively Heat' burners give a red hot steady flame, fine for frying steak, making jelly and baking.

"It has been very satisfactory in cooking for a growing family of six on the farm."

(*Signed*) MRS. S. R. PARKS.

Thousands of other women, like Mrs. Parks, know the economy and convenience of the Red Star Oil Stove with its wonderful *wickless* "Lively Heat" burners.

Go to the nearest Red Star dealer. See a demonstration and you will be convinced. Made in two to six burner sizes and at a price for every purse. Smaller sizes cost no more than ordinary oil stoves. Most dealers sell on easy terms. If your dealer is not listed below, write us at once and we will send you the interesting Red Star Book free and the name of a nearby dealer.

LEADCLAD FARM FENCE

Put Up One Fence—Save the Cost of Two

Whether you plan on putting fifty dollars or one hundred and fifty dollars into a new fence, you'll make your money go three times farther by purchasing Leadclad Fence.

The kind of coating on the fence you buy will actually determine whether you buy one or three fences during the next ten or twenty years.

The thick pliable coating of pure lead on Leadclad Fence keeps rust away many years longer than the coating on ordinary fence.

No matter whether you live where the life of a fence is long or short, Leadclad Fence will give you triple the service of ordinary fence.

When you buy Leadclad Fence you buy the equal of three ordinary fences—you actually get two fences for nothing.

Our big, new Leadclad catalog tells you how you can start at once to save money on fence, roofing and eaves trough.

It's free—send for it.

"Leadclad Fences Make Good Neighbors"

OUR YOUNG PEOPLE'S FORUM!

From Forum Members and Friends

Dear Cousin Ruth and Forum Friends:—I enjoy reading the Forum page very much. I have read them all for two months for I have been sick with pneumonia. I also have read a number of books. Five Little Peppers, two of the Bunny Brown books, Elsie Dinsmore and Raggety Ann are some of them.

I am very sorry to miss school. We have such a nice school. There are over 800 pupils and about 26 teachers. It is called the Unionville Joint Consolidated School, which means that all pupils from four townships go to school there. There are six buses which carry the pupils back and forth, some of them make two or three trips. We have a chance to study most everything. I was taking violin lessons before I was taken sick. A very wealthy man gave the school $160,000 to build ten more rooms to the building.

We have some pets. We have a sheep which follows my baby sister and me around. We have a cat named Jimmy and a mother Bantam with eight little ones that a neighbor gave us.

These nice warm spring days my father has started his farm work. Yesterday he planted a bed of asparagus and mother is getting ready for some baby chicks on Monday.—Virginia Conrad, ten (X), Chester County, Pa.

Dear Cousin Ruth:—I have been reading the Forum Page for a long time and I find it very interesting.

I live on a farm. We have five cows. I milk three or four every evening and I'd rather milk than make supper so I get my share of milking. I have the cutest little pet cat, his name is Snookie. Every evening when my sister and I come home from high school he comes to meet us. He knows we'll let him in the house. Every evening he'll come to the door, stand up and look in the window. Then I let him in. I am sending a picture of Snookie and me.—Esther King, (X), York County, Pa.

SNOOKIE AND I
Esther King, (X), York County, Pa.

Dear Cousin Ruth:—I received my membership pin Monday night and I want to thank you. I will try to write more from now on to show I appreciated it.

Cousin Ruth, you ask me if I used to live in New Jersey. Yes, in the northern part in a town called Gladstone. I lived there till I was five years old. Then my father took a position as superintendent of a farm in Stockbridge. It is situated in Berkshire County. We have some lovely mountains to look at from every direction. One of them is called Bear Town Mountain, Washington Mountain and Monument Mountain, and we can drive about ten miles to a city called Pittsfield and see the Greylock Mountain. There are three peaks like a chain and they are the highest moutains in Massachusetts. Over this mountain there is a road called the Mohawk Trail. In winter you cannot travel over this road.

Stockbridge is a summer resort and has many large inns. There are smaller ones, too. The next time I write I will tell you the industries around here.—Virginia Opperman, (X), Berkshire County, Mass.

Dear Cousin Ruth:—I live on a farm and have three pet cats. I call one Nancy, one Bluey and one Tom. My schoolmate came to see me on Sunday and we played Bluey and Nancy were our dolls.

Last fall mother, daddy, uncle and I found a beehive. It was in a hollow maple tree about a half mile from our house. Daddy and uncle cut the tree down and smoked the bees with sulphur. Then they took out two bucketfuls of honey. None of the bees stung me for I stayed a good piece away, but they stung the rest. Here is my picture.—Dorothy Mowry, seven (X), Somerset County, Pa.

HERE IS MY PICTURE
Dorothy Mowry, Somerset County, Pa.

Dear Cousin Ruth:—I received your letter and membership pin. I thank you very much for it. Our school closed April 29th. We had a picnic and a program. I had a piece to speak. The name of it was "A Welcome."

I am glad that school is done and vacation is here because I can help papa lots this summer.—Harold Caldwell, Jefferson County, Pa.

Dear Cousin Ruth and Readers:—On Friday May 6 after our picnic we (8th grade) had final examinations for entrance into high school in the fall.

We have four little ducks and fifty little chickens just now.

Cousin Ruth, I am sending a recipe for a cocoa cake. It is very good, I think.

COCOA CAKE

1 cup sugar
4 tablespoons butter
Yolk of one egg
1 cup of sweet or sour milk
1 teaspoon soda
½ cup cocoa
2 cups flour

You can use any kind of an icing on it but I use mostly just the plain white icing.—Philura M. Klipple, (X), Lackawanna County, Pa.

Dear Cousin Ruth and Forum Friends:—I thought I would write and thank you for that pin which I received about three weeks ago. My oldest sister, Ruth, is coming home from California on the eighteenth of this month. I will be glad to see her for she has been gone for two years.

Now our school is over and I am glad but I guess I will be glad when it starts again. We are getting a different teacher this year. Our other teacher gave silver spoons to the ones that got the most headmarks in each class. Last year I got four, this year I got three.—Mary E. Ressler, (X), Lancaster County, Pa.

Dear Cousin Ruth:—I am sending you a recipe for lemon sponge pie. I think it is very good.

LEMON SPONGE PIE

1 cup sugar
Juice and rind of 1 lemon
Butter size of an egg
½ teaspoon salt
2 heaping tablespoons flour
2 eggs, separated
1 cup milk

Add the stiffly beaten whites of eggs last.—Florence Miller, Clarion County, Pa.

Cousin Ruth's Letter

I'M MYSELF and the Puzzle Editor is herself and we don't like to be all jumbled into one! You know you wouldn't like it if a friend of yours when writing you a letter addressed it to your father or mother or sister or brother. You'd want that letter to have your name right on the outside of the envelope. And that's the way with us. Miss Puzzle Editor and I are both in the Pennsylvania Farmer family but we're different people and we want to open our own mail. So when writing the Forum please address the mail to Cousin Ruth. If you're answering a puzzle send that answer to the Puzzle Editor.

Some of you sent me puzzle answers lately asking me to make you members of the Forum and to send you the membership pin. Why, I couldn't do that, for the Forum and the Puzzle Corner are entirely separate departments. Membership in the Forum and the pins that go with that membership are earned by sending a particularly good contribution—letter, drawing or picture, not money—to the Forum.

BILLY, WEARING MY HAT
Anna Craven, (X), Cameron County, Pa.

So all please remember to address Forum mail to Cousin Ruth, care of Pennsylvania Farmer, 261 S. 3rd St., Phila., Pa., and send puzzle answers to the Puzzle Editor.

Apparently a few of you are still ashamed of your names; anyway, you forget to tell me who you are every once in awhile.

May you all have a grand summer. Let me hear about your good times in the fields and at play.

COUSIN RUTH.

OUR LITTLE FOLKS' PUZZLE CORNER

DEAR LITTLE FOLKS:—They say that extraordinary things happen right around us all the time, and I must confess that I do sometimes see and hear—or hear about—some interesting things right here in the city where I am most of the time. Do you know what a sky-scraper is? Well, one day a man was working in one of those sky-scrapers—it was a huge building with about thirty or more stories—and he heard an alarm of fire. He stopped work. Just like that, didn't wait to be told he might or anything. Then he climbed out of the window of that thirty-story building. And, here comes the strange part, when he landed on the sidewalk he wasn't hurt at all; his hands were dirty and so were his clothes, but that may have been because he worked hard when he did work. Now, if you look at the square below and begin with the letter "H," (all dressed up in a little black frame on the second row of letters) and follow the right path, going up or down or sideways but never diagonally, until you come to the letter "W" in its little frame on the third line across, you will find out why it was that this man did not get hurt. When you have found the answer, send it to me on a postcard or in a letter, so that it reaches me by May 28th. BE SURE TO SAY HOW OLD YOU ARE, WHEN YOUR BIRTHDAY COMES, AND IN WHICH COUNTY YOU LIVE. The ten children, sending in the correct answer, whose cards are the best in grammar, spelling, punctuation and general appearance, will each be awarded a prize. Address all puzzle answers to The Puzzle Editor, Pennsylvania Farmer, 261 South Third Street, Philadelphia.

The answer to the puzzle in the April 30 issue (the one with the strange looking words) is: MARCH WINDS AND APRIL SHOWERS BRING FORTH MAY FLOWERS.

The prize winners are: Eileen P. Bushman, age 10, Gettysburg, Pa.; Dorothy Campbell, age 10, Greenville, Pa.; Wilmer George, age 13, Quakertown, Pa.; Beulah C. Herrold, age 13, Port Trevorton, Pa.; David A. Nolan, age 10, Curry Run, Pa.; Elma Parenti, age 8, New Eagle, Pa.; Helen Reeder, age 8, Sunbury, Pa.; Eva Romanishin, age 11, Millville, N. J.; Myrtle Smith, age 13, Smithton, Pa.; Charles Volpe, age 7, Derry, Pa.

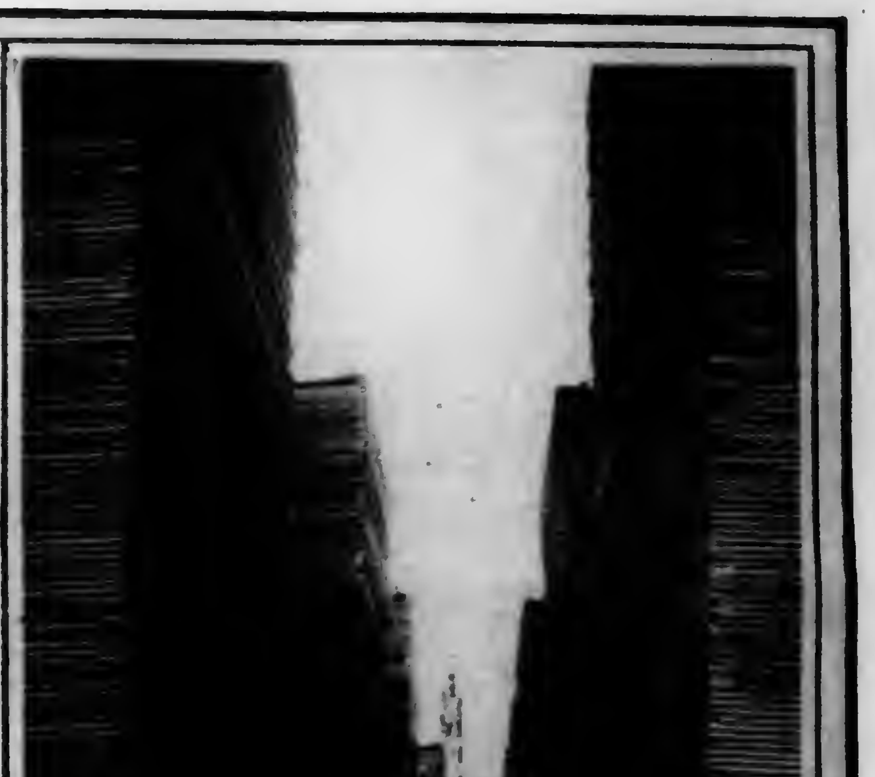
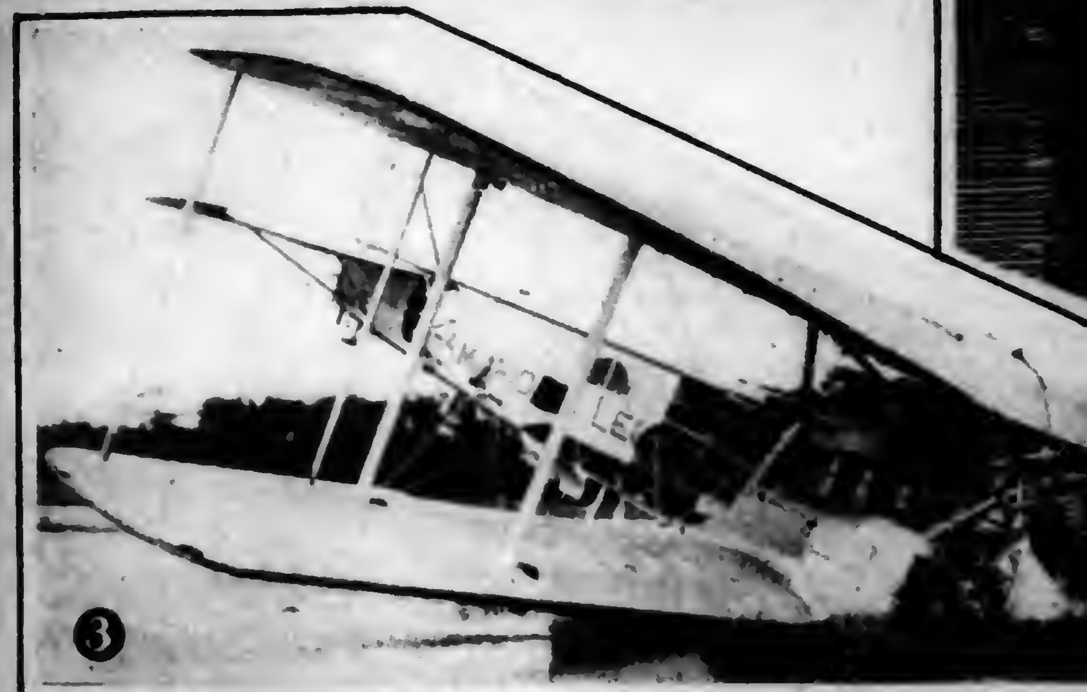
PASSING EVENTS IN PICTURES





1.—Chester H. Gray, of the Farm Bureau Federation, and Fred Brenckman, Washington representative of the National Grange, photographed on their way to the White House on April 28 for a conference with President Coolidge. Mr. Brenckman formerly was secretary of the Pennsylvania State Grange.

2.—The skyscraper method of storing lumber, used in the state of Washington, is of interest to visitors. The piles of lumber are 75 or more feet in height.

3.—The "American Legion" after it had crashed into a marsh on Langley Field, Virginia, killing Lt. Com. Noel Davis and Lt. Stanley Wooster. The aviators were making a final test of the giant biplane before attempting the trans-Atlantic hop.

(Copyright by Underwood and Underwood)

4.—A steady stream of Chinese students passes thru Seattle, Washington, on the way to American Universities. A group of these young men and young women arrived on the S. S. President McKinley on April 28th.

5.—A parrot, said to be the only one that sings over the radio, broadcasted recently from several Chicago Stations.

According To Code

By Katherine Mayo

COPYRIGHT 1918 BY KATHERINE MAYO

This is the first of a series of true stories about the Pennsylvania State Police. The valiant Sergeant Stout of "According To Code" is now Captain Stout in command of Troop E whose headquarters are at Harrisburg.

FIRST SERGEANT STOUT, of "A" Troop, becomes his name like any hero of English ballad. First Sergeant Stout is towering tall, and broad and sinewy in proportion. There is not a meagre thing about him, from his heart and his smile to the grip of his hand, whether in strangle-hold or in greeting. Just as he stands, he might have roamed the woods with Robin Hood, or fought on the field of Crecy in the morning of the world.

But First Sergeant Stout has one peculiarity that, in the morning of the world, could never have marked him. Sometimes, when he turns his head to right or to left, his head sticks fast that way until he takes it between his two hands and lifts it back again; and the reason is that he carries a bullet close to his spinal cord, lodged between the first and second vertebrae.

Once upon a time Sergeant Stout had charge of a sub-station in the town of Uniontown, Fayette County. And among those days came a night when, at exactly a quarter after ten o'clock, the sub-station telephone rang determinedly.

Nothing of the novel distinguished the incident, since that sub-station telephone was always determinedly ringing, day and night, to the tune of somebody's troubles. But this time the thing was vicariously expressed; or, you might call it, feebly conglomerate.

The Constable of the village of Republic held the wire. He complained that one Charles Erhart, drunken and violent, had beaten his wife, had driven her and their children out of doors, and was now entrenched in the house with the black flag flying.

"She's given me a warrant to arrest the man, but I can't do it," moaned the Constable. "He'll shoot me if I try. So I thought some of you fellers might like to come over and tackle him."

The Sergeant looked at his watch. "The trolley leaves in fifteen minutes," said he: "I'll be up on that."

The trolley left Uniontown at half after ten, reaching Republic, the end of the line, just one hour later.

"Last run for the night," the motorman remarked as they sighted the terminus.

"I know. And I've only about half an hour's business to do here. Then I'd like to get back. Do you think you could wait?"

"Sure," said motorman and conductor together. "Glad to do it for you, Sergeant."

HOVERING in the middle of the road, at the "s-far-'s-we-go" point, hung the Constable—a little man, nervous and deprectory. Religious pedagogy would have been more in his line than the enforcement of law. Now he was depressed by a threatened lumbago, and by the long hours his duty was inflicting upon him. Also he was worried by the present disturbance in his bailiwick, and therefore sincerely relieved to see an officer of State Police.

"He's a bad one, that Charlie Erhart, at the best of times. And when he's drunk he's awful. I couldn't pretend to handle him—it wouldn't be safe. Like's not he'd hurt me. But you,"—as if struck by a new thought the Constable suddenly stopped in his tracks to turn and stare at the Sergeant,—"Why, you—why, I thought you'd bring a squad!"

"To arrest one man?" the Sergeant inquired gravely. "Well, you see we're rather busy just now, so we have to spread ourselves out."

THEY were walking rapidly thru the midnight streets, turning corners, here and again, into darker and narrower quarters. The ring of their steps stood out upon the silence with a lone and chiselled clarity, as tho all the rest of the world had fled to the moon. Yet, to the Constable's twittering mind, that very silence teemed with a horrible imminence. The blackness in each succeeding alley seemed coiled to leap at him. He dared neither face it nor to leave it at his back.

His gait began to slacken, to falter. At last he stopped.

"I guess I'll leave you here." He flung out the words in a heap, as if to smother his scruples. "You just go on down the street, then take the second turn to the left, and the house is on the far side, third from the corner. You can't miss it. And my lumbago's coming on so fast I guess I'll have to get home to bed. Glad you came, anyway. Good-night to you."

"Wait a moment!" said the Sergeant. "If you are not coming along, I want to see the woman before I go farther."

The Constable indicated the tenement house in which the fugitive family had taken refuge. Then, like a rabbit afraid of being caught by its long ears, he whisked around and vanished into the dark.

Mrs. Erhart, nursing a swollen eye and a cut cheek, clutching a wailing baby in her arms and with a cluster of half-clad, half-starved, wholly frightened and miserable children shivering around her, narrated her tale without reserve. The single little lamp in the room, by its wretched light, showed her battered face in tragic planes. Her voice was hoarse, hard, monotonous. She had no more hopes, no more illusion, no more shame.

"He has tried to kill us all—me and the children—often. He doesn't get hopeless drunk. He gets mad drunk. Some day he will kill us, I guess. There's naught to prevent him. Do I want him arrested? Yes, sir, I do that! He's tried to take our lives this very night. And he's keeping us out of all the home we've got—all the home we've got.

"But"—and she looked up with a sudden strange flicker of feeling akin to pride—"I reckon he'll kill you if you try to touch him, big as you are. He sure will! Erhart's a terror, he is! And today he's cut loose for a fact."

Armed now with indisputable grounds for entering the house Sergeant Stout went ahead with his errand. The place, when he found it, proved to have a narrow passageway running from the street to its back door. Sergeant Stout, taking the passageway, walked quietly around to the back door and knocked.

"Who's there?"

"State Police."

"You don't get in!"

The voice was loose, flat, blaring—a foolish, violent voice.

THE Sergeant set his shoulder against the door. It groaned, creaked, splintered, gave way, opening directly into the kitchen. Confusion filled the place. Broken furniture, smashed dishes, messes of scattered food, made in the smudgy lamp's dim light a scene to be grasped at a glance.

But there was no time to look about. Directly at hand, half-crouching, lurching sidewise for the spring of attack, lowered a big, evil-visaged hulk of a man. His eyes were red, inflamed with rage and drink, his breath came in gusts, like the breath of an angry bull.

"You would, would you! You—bloody—Cossack! I'll learn you to interfere with the rights of an honest laboring man in his home!"

He held his right hand behind him as he spoke. Now he jerked it forward, with its gun.

With a jump the Sergeant grabbed him, wrenched the revolver out of his grip, and, tho the other struggled with all his brute strength, forced him steadily down to the floor. Then, with practised touch, he made search for further weapons, and was already locking the handcuffs on the wrists of the prostrate prisoner when a voice from beyond made him raise his head.

Opposite the back entrance, on the other side of the kitchen, an open doorway framed the blackness of the front room. That doorway had been empty. But now, around its casement, and to the left as the Sergeant faced it, projected a long, dully gleaming bar—the barrel of a rifle, while behind, faint against the night within, showed the left hand and the left eye of the gunman.

"You!" he had called, having already brought his rifle to bear.

And the Sergeant, stooping above his fallen assailant, had looked up in quick attention.

THE gunman had wanted a better mark—a full front face to fire at. He had it now—so he blazed away. The bullet struck fair between the Trooper's eyes, tearing thru to the spine.

But because he had chanced to receive it in that very position, stooping and looking up with his head half-raised, the charge had spared the chamber of the brain, passing along its lower wall. The shock, nevertheless, was terrific.

Sergeant Stout, rightly named, never wavered. Instantaneously, at his first perception of the threat beyond, he had drawn his service revolver. And even as the other's bullet burst thru his head he had sprung erect and fired at the gleam of that one visible eye beyond the door. Now, sliding over to the wall on the right, and so gaining a better view into the room, he covered his adversary with his revolver.

The gunman was in the very motion of firing again—and the Trooper's revolver would have anticipated the shot—when suddenly the rifle barrel wavered and dropped as its holder sank forward across the threshold.

Still covering him, the Sergeant walked over and looked at the man. He had fainted—or was feigning it. The Sergeant, kneeling beside him, saw that he was bleeding from the head. That snap revolver shot had gone true, striking just above the eye and glancing around to the back of the skull. But the soldier's trained touch told him that the wound was slight. Even on the instant the fallen man opened his eyes—began to stir. In another minute he would be all alive again.

The Sergeant stood up. In the cool, impersonal way made second nature by the training of the Force, he rapidly weighed the situation. Here was he, Sergeant Stout, of the Pennsylvania State Police, at midnight, alone, in the back room of an obscure dwelling in a mean place. He had in his possession two prisoners—one handcuffed and cowed, the other for the moment safe by reason of a rapidly passing daze.

If this were all, the situation would be of an extreme simplicity. His second prisoner revived, he would march them both to the waiting trolley and take them back to Unionville Jail.

BUT this was not quite all: He, Sergeant Stout, had been shot thru the head. His head seemed to be growing bigger, bigger. Blood was pouring down his throat in a steady stream. It would make him sick if he stopped to think of it—and his head was growing bigger—curiously bigger.

Presumably, like other persons shot thru the head, he would presently die. If he died before he handed these men over into safekeeping, that would be a pity, because they would get away.

Further, if he could not maintain sufficient grip on himself to handle prisoner number two, prisoner number two, beyond any doubt, would shortly shoot again. As long, however, as he did keep that grip on himself, just so long prisoner number two was a "prisoner under control."

And prisoners under control, by the code of the Force, must be protected by their captors.

Obviously, then, there was just one course for Sergeant Stout to pursue: Since he must, beyond question, complete these arrests, and since he must not permit his second captive to make the move that would justify disabling him, he must hang on to his own life and wavering senses long enough to march the two men to that trolley car.

It had to be done—tho his head was growing bigger—bigger—(surely it must be spreading the skull apart!) and the thick, choking blood was pouring down his throat.

He kicked the rifle away from the threshold, out of the left-handed gunman's reach. The gunman was moving now—consciousness fully returned. The Sergeant, motioning with the point of his revolver, brought him up standing. Then, with another gesture of his revolver too simple to be misunderstood, he indicated to the two the door to the street.

It must have seemed to them like taking orders from a spectre—from one of those awful beings thru whose charmed substance bullets pass without effect.

They looked at him aslant, fearfully. This Presence had been shot thru its brain,—there was the mark,—yet it gave no sign of human vulnerability. It was not good—not natural!

For the last hour, they had been amusing themselves, this well-met pair, by firing at a mark on the inner kitchen wall. Their bullets had been striking thru into the dwelling next door, arousing a spicy echo of women's screams. With relish they had awaited some attempt at restraint. But they had not expected just this!

SCARCELY daring to meet each other's eyes, they filed out of the door, into the yard, into the street. But they did not guess how the Trooper's head was sailing.

"I've got to make it!" said the Sergeant to himself, clenching his teeth. And he would not think how many blocks it was to "'s-far-'s-we-go."

"One block at a time'll do it," he told himself. One block at a time he was steering them rapidly along—when, upon his unsteady hearing broke the sound of footsteps, approaching on the run.

"Another thug to their rescue, maybe!" thought the Sergeant—and the idea pulled him together with a jerk.

As the footsteps rang close, he held himself braced for an onset. They neared the corner ahead. His revolver waited ready. But the flying figure, rounding under the street lamp, showed, blessed be Heaven! the uniform of the Pennsylvania State Police.

Trooper Lithgow, returning to the sub-station from detached duty, and passing thru the town of Republic, had learned from the waiting trolley-men of his Sergeant's presence, with some hint of the errand that had brought him there. Thinking that help might not be amiss, he had started out to join his officer, and was hastening along the way when the sound of the two shots, distinct on the midnight silence, had turned his stride to a run.

TOGETHER they walked to the trolley, herding the prisoners before them. Together they rode to Uniontown, with the prisoners between them. From time to time the two trolley-men looked at Sergeant Stout, with the bleeding hole between his eyes, then looked at each other, and said nothing.

More rarely, Trooper Lithgow looked at Sergeant Stout, then at the trolley-men, but said nothing. A proud man he was that night. But he did not want those trolley-men to know it. He wanted them to see and to understand for all time that this thing was a matter of course—that you can't down an officer of the Pennsylvania State Police on duty.

They got their two prisoners jailed. Then they walked over to the hospital (the last lift of the way up the hospital hill, Lithgow lent a steadying arm)—and there, in the doctor's presence, Sergeant Stout gently collapsed.

"I'm glad you came, Lithgow. But you see—I could have fetched it!" he said, with the makings of a grin, just before he went over.

There were four days when he might have died. Then his own nature laid hold on him and lifted him back again into the world of sunshine.

"It's one of those super-cures effected by pure optimism. The man expected to get well," the surgeon said.

But they dared not cut for the bullet. It lay too close to the spinal cord. And so First Sergeant Stout, when his head gets stuck fast, has yet to take it in his two hands and shift it free again. Still, with a head as steady as that, what does it matter?

Another Hatchet Episode.

Did you ever hear this one?—

The Barber Didn't Talk

"I want my hair cut, and no talk," said a six-footer as he walked into a barber's shop and sat down.

"The—" commenced the man in the apron.

"No talk, I tell you!" shouted the heavy man. "Just a plain haircut. I've read all the papers, and don't want any news. Start right away now."

The man in the apron obeyed. When he had finished the customer arose from the chair and surveyed himself in the glass.

"Good heavens!" he exclaimed. "It's really true then? You barbers can't do your work properly unless you talk."

"I don't know," said the man in the apron. "You must ask the barber. He'll be in presently. I'm the grocer's assistant, come in for a shave."—De Laval Monthly.

Might Be True

Duffer—That fellow, Moseley, has been posing as an office manager, but I found out today he's nothing but a janitor.

Muffer—What makes you think so?

Duffer—I heard him tell his wife he was going down to the office to clean up his desk.

Good Idea

Waiter (to a newly married couple)—Is there anything else, sir?

Groom—Yes, a honeymoon salad.

Waiter—What is a honeymoon salad, sir?

Groom—Lettuce alone.

Just Too Much

Judge (to convicted burglar)—Have you anything to say before sentence is passed?

Burglar—The only thing I'm kicking about is bein' identified by a man that kept his head under the bedclothes the whole time!

Eastern States Farmers' Exchange

Just Another Honor Roll

The list of owners of the cows which produced over 400 lbs. fat in 1926 in the Franklin County, Massachusetts, Cow Testing Association looks like a section of the Eastern States Farmers' Exchange membership list. Of the 9 farms represented 8 fed Eastern States grain. These 8 farms supplied 20 cows which produced more than 400 lbs. of fat, these cows ranging from 547.3 lbs. to 405.1 lbs., while the other farm supplied 1 cow which produced 412.9 lbs. fat.

Thoughtful feeders are impressed by facts like these. They know, of course, that cow testing association records have enabled these 8 farmers to eliminate low producing stock from their herds and to develop cows which would have produced a lot of milk and fat on any good home mixed or ready mixed grain ration but they also know that to get the greatest profit out of their stock these feeders have selected Eastern States grain to supplement their roughage. Cow testing association records on production and cost of production have influenced their choice of feed just as these records influenced their choice of stock.

The control of the quality of their grain is the factor which users of Eastern States grain regard most highly. They know that their Exchange is committed to the policy of securing for its members the best of ingredients blended to take care of the needs of their stock. They know that their Exchange through mill ownership and the direct selection and purchase of ingredients can and does carry out this important policy. They know that as individuals it is difficult for them to select the kind of ground oats, of corn meal, of distillers' grains, of cottonseed meal, they should use but that as members of this cooperative they select these and other ingredients which enter into their feeding program through their own employes employed by their own Exchange to serve their interests.

The April issue of the Eastern States Cooperator contains an article by Charles B. Lee, manager of the Eastern States Mill at Buffalo, which takes up in considerable detail the principles of feed ingredient selection. It discusses the question of various grades of feed ingredients in a simple, interesting, and instructive way. It goes into the questions of closed formula and of open formula feeds and shows the weaknesses and the advantages of each. All feeders of stock and poultry will get a lot out of this article.

We shall be glad to send a copy of this issue of the Cooperator to any farmers who ask for it.

Eastern States Farmers' Exchange

Better

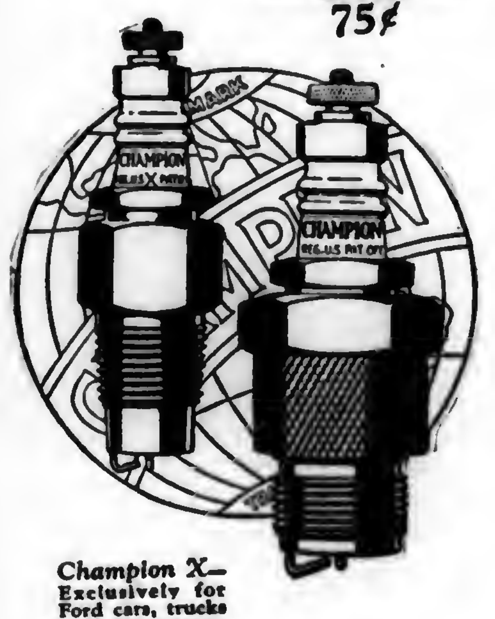
For Cars, Tractors Trucks and Stationary Engines

On two out of three farms you will find Champions the choice for better performance in tractors, trucks, stationary engines and all other engine-driven farm equipment.

This preference for Champions on the farm duplicates the world-wide preference for Champions among millions of motorists—further emphasizing the fact that Champion is the better spark plug.

Car manufacturers recommend, and hundreds of thousands of motorists are changing spark plugs every 10,000 miles to insure better and more economical car operation. This is true, even of Champions, in spite of their world-wide reputation for remarkable long life.

Champion—for trucks, tractors and cars other than Fords—and for all stationary engines—packed in the Blue Box 75¢



Champion X—Exclusively for Ford cars, trucks and tractors—packed in the Red Box 60¢

Scales Make Them Lame

I am having a lot of trouble with my fowls. They get sick and mope around for two or three weeks, then we have to kill them. At first their necks get crooked and they get lame. Their legs are covered with scales and bowels are loose. Can you tell me what the trouble is and what to do?—M. L., Cumberland County, N. J.

I am inclined to believe that your fowls are getting something decayed that is causing the trouble. They may have access to a decaying carcass somewhere or may be scratching in the barnyard and finding material there which is poisonous to them. Give a dose of Epsom salts in the drinking water at the rate of one pound per 100 birds, and make sure that their surroundings are sanitary and their food wholesome.

The scales on the legs are caused by the scaly leg mite. Hens in that condition are liable to become lame. The treatment is to soak the hens' legs in warm, soapy water, removing scales that are loose, and then applying carbolated vaseline. This treatment will have to be repeated several times in the worst cases.—R. L. S.-H.

Chicks Pick One Another

We have 500 White Leghorn chicks and they are picking each other right on top of the tails. We feed them all the starting mash they can eat, and about three quarts of fine scratch feed. We also have them out. They are five weeks old. Can you tell me what is the cause of this trouble?—J. S., Bucks County, Pa.

There seems to be an unusual amount of tail picking and similar troubles in poultry flocks this season, for some undiscovered cause. There are several remedies you can try. A teaspoonful of salt or baking soda per gallon of drinking water helps in some cases.

I have been feeding condensed buttermilk as it comes from the keg, smearing a quantity that the chicks will clean up in fifteen or twenty minutes on the wall of the house where they can pick it off, and have had no trouble to speak of. The cockerels are usually the worse offenders, and if you can keep them by themselves you will have less trouble with the pullets. Be sure that the chicks always have water and mash before them.—R. L. S.-H.

What is Pullet Worth?

I plan on selling my last year pullets and haven't the least idea what they are worth this time of year. They were hatched in May and started laying in November. I would appreciate your advice very much.—F. E. S., Sullivan County, N. Y.

A good pullet that started to lay in November ought to be worth one-half the difference between her value as a pullet then and her value for market in the fall as meat, at the first of May, as she has then completed one-half her laying. On that basis a Leghorn pullet worth $2 last fall would be worth about $1 next fall to the chicken dealer, and accordingly is worth $1.50 to you as a layer at the present time. These figures are based on local prices but will serve as a guide for your conditions and breed.—R. L. S.-H.

Tobacco Routs Worms

I have a fine lot of White Leghorns and they have the worms. Can you give me a good remedy?—C. I. S., Adams County, Pa.

A good treatment for roundworms in poultry is the use of tobacco powder in the mash. Two pounds are added to every 100 of mash for about a month, and this will clean out most of the worms. In addition the dropping boards should be screened with poultry netting so that the hens cannot pick over the droppings and become reinfected.

To remove tapeworms give each fowl a capsule containing one gram of Kamala. The Kamala capsules can be supplied by your druggist or veterinarian.—R. L. S.-H.

Diet May Cause Wry Neck

I have some four-week-old chicks that are dying of stiff neck. At first their neck is just a little stiff but soon draws around to the side, causing chick to become overbalanced before it dies. Its head is almost back of wing. Will you please let me know cause and remedy.—G. E. H., Burlington County, N. J.

Without knowing something of the feeding and management of your chicks it is impossible to say just what is causing them to die of stiff neck. I imagine that they are getting something they should not have such as poor beef scrap in the mash, or if they are outside they may be getting some sort of decayed matter. On the other hand, the feed may be all right except that they require more laxative material such as green stuff or sour milk.—R. L. S.-H.

Hens Hatch Goose Eggs

Will you please send me information about the hatching and feeding of ducks and geese. I would like to know about the care of eggs especially, before hatching and at time of hatching. I have some under hens and it's my first attempt. I read your last article on geese and I am very anxious to raise some.—Mrs. H. N., Wyoming County, Pa.

In hatching goose eggs under hens, it is advisable to sprinkle them with lukewarm water once or twice a day. Some people dip them in the water the last week of the hatch, especially if the hen has been set in a dry place.

After the young gosling has pipped the shell it generally rests for a time before hatching. If it does not get out a day after it has pipped it may be helped out carefully. I think it is a good plan to turn the eggs under the hen by hand every day, as they are pretty large for the hen to turn herself.

Other points in the care were taken up in the article you saw. You will not find either ducks or geese hard to raise, altho ducks require somewhat more feed, as the geese make a large part of their growth on grass. Hatching directions for ducks are the same as given for geese.—R. L. S.-H.

Look at Her Face

Please accept my thanks for the information you sent in answer to my last letter. Some of my chickens are eating eggs but I am unable to catch the birds that commit the crime. Can you suggest anything to break up this habit?—G. H., Columbia County, Pa.

Usually a hen that has been eating eggs has some of the yolk on her face or the feathers of her head and neck, by which you can tell her. However, if the egg eating has been going on for some time the whole flock may have the habit. The best things to do in that case would be to provide plenty of nest room with lots of excelsior straw in the boxes, darken the nests, gather the eggs several times a day, and let the hens out if that can be done.—R. L. S.-H.

Toledo, Ohio, May 16, 19

Cloverseed, cash, imported, $16.[illegible]; domestic, $26.50; October, $16.[illegible]; alsike, cash, $24. Timothyseed, old, $[illegible]; new, $2.60; May, $2.60.

Firmer Tone Features Markets

Review of the Week Ending May 14

POTATOES—The market on both new and old potatoes opened weak with heavy offerings and a slack demand. A stronger tendency developed toward the middle of the week and prices made daily advances up to the end of the week. The market closed firm with a moderate demand. On Monday, May 16, the market opened barely steady on both new and old stock but trading was rather slow.

EGGS—The market for midwestern and southern eggs in New York was rather unsatisfactory. The demand was quiet and prices irregular. The quality of the offerings showed a wide variation and fancy stock was in rather light supply. Receipts of nearby eggs were liberal but trading showed some improvement.

POULTRY—Supplies of live poultry were more than ample for the demand in New York. Several carloads were carried over from the previous week and the weekly receipts totaled 242 cars. Light fowl were scarce and fairly active but heavy stock was dull. Broilers were firm and active. Dressed poultry was in light receipt and prices were generally firm.

LIVESTOCK—Hog prices were lower in Chicago while beef steers were also weak. Heifers were steady to 25c higher while cows advanced. Vealers and heavy calves were strong with stockers and feeders steady. Fat lambs and ewes were steady while yearling wethers advanced.

HAY—The markets were unsettled. Receipts were light in the East with prices holding steady. The best grades of timothy and mixed clover sold readily. Alfalfa receipts were moderate but the market was dull.

GRAIN—Markets were unsettled with prices higher than a week ago. Corn and oats were higher due to the late season and the demand for these grains.

FEEDS—The market was irregular. Gluten feed was scarce and prices were higher. Light offerings caused hominy feed prices to advance. Wheat feeds were slightly weaker due to a lighter demand. Cottonseed and linseed meal were steady.

BUTTER—The butter markets opened weak with prices ½c to 1c lower than the previous week. Receipts were liberal and prices continued to decline up to Wednesday. On Thursday a firmer tone developed and the market closed firm.

County News and Comment

Armstrong County, Pa.—Spring work well in hand, most potatoes planted and fully one-half of corn area. Potato acreage will be less than last year's, while the corn acreage will be about the same. The oats acreage will be larger than that of last season. Wheat and rye are looking fairly well with an excellent stand of spring seeded clover. Many planted alfalfa with oats and it, too, gives good promise. Cherries, peaches and plums suffered injury from the late freezes. Apples were uninjured. Much dissatisfaction over the general quality of certified seed potatoes coming into the neighborhood this season. Thousands of hatchery chicks being bought. Losses reported heavy on account of poor brooder facilities. Spring litters of pigs small, but pigs vigorous. Most rural schools closed. Better tillage has been practiced here for spring crops than ever before. The first spraying for codling moth will begin next week. Some surplus old hay being held over. Not every one tested seed corn for germination ar[illegible]. Not much real corn weather yet, too cool. Prices: wheat, $1.30; rye, $1.25; corn, 60c in crib; oats, 60c; eggs, 25c; butter, 45c; good hay, $25; baled straw, $15.—W. M. P., May 11.

Bradford County, Pa.—Trees are showing leaves now. Fruit trees beginning to blossom. Weather cold and wet. Some oats sown. Early dry weather gave the farmers a chance to get the plowing done. Not much corn ground plowed as yet. Grass looking good. Winter grains fair. Pressed hay nearly all moved, sells slowly at $17 per ton. Many baby chicks bought this year. Quite a large percentage imported from Ohio and New Jersey. Some report heavy losses from white diarrhea. Other flocks show practically no loss. Public schools closing for the summer.—G. E. E., May 7.

Butler County, Pa.—The month of April dealt a very severe blow to agriculture in this section. Very warm weather during the middle of the month brought the fruit and vegetation on at a rapid pace, then a sudden change to 10 degrees below freezing left everything looking as if it had been scorched. Fruit of all kinds will be very scarce, even strawberries badly crippled and grass and clover set back three weeks. Plowing all done and oat sowing in progress. Land values high. Livestock scarce.—F. E. P., May 5.

Centre County, Pa.—Farm work late owing to the frequent rains. Much oats to be sown as soon as conditions permit. Cool nights with frosty mornings continued all thru April. Reports come from some localities that the fruit blossoms are killed while other orchards are not injured. Several dogs have been running deer on the mountains. They got into one man's pasture and killed some sheep. Several men went after them and shot two which were unknown to this locality. The others scattered and have not been heard of since. Spring lambs in demand at 15c.—A., May 5.

Clearfield County, Pa.—Altho our region has been visited in the last two weeks by a number of frosts and actual freezing periods we can discern but little damage to the fruit buds. Showers have been timely which has eased the draft on the plow and has pushed the pastures to a serviceable stage, a relief to the many stock owners who were short on roughage. Grass fields look well except clover tips which are brown from frost injury. Winter grain is in about usual condition, the late sown, of which there is much, is thin and backward. Markets are slow now. Potatoes, $1.25; apples, $1.25@1.50; cabbage, 3c; butter, 50@60c; eggs, 30c; hens, live weight, 25c; hay, $25.—D. H. W., May 5.

Cumberland County, N. J.—Greenwich neighborhood has been shipping great quantities of broccoli. Last week, May 7, prime asparagus brought $3.50 to $7 per dozen; culls, $3.50@5. The bees from several apiaries were transported in their hives to the Del-Bay orchards for pollinizing purposes during the apple blossom season. The Bridgeton postmaster has sent out notices to all the patrons of rural routes to cooperate in painting mail boxes and their supports white and the name in neat black letters on the boxes. Corn planting is in progress. The Hopewell Township committee meeting was given over to a talk on cows and cow testing by Walter Shate and Thomas Elwell, both committee men. Leamy Hitters, of Roadstown, lost his home and all the buildings from fire said to have been caused by a stove in a brooder house. Shad fishing at Bay Side is about discontinued due to poor catches. Early gardens look fine.—C. J. S., May 7.

Indiana County, Pa.—This has been a very late spring. Farmers just finishing sowing oats. Not much fall plowing had been done. Average acreage of oats was sown. Corn ground plowed. It is difficult to get good seed corn; 82 per cent corn seems to be the highest testing corn one can buy. Winter wheat looks very bad due to late rains, also rains last fall and freezing along with late sowing. Hay and pastures very late, just starting to grow nicely. Very few have turned out on pasture. Prices: Six-week-old pigs, $15 pair; good cows hard to buy, also horses; hay $18@20; wheat, $1.30; eggs, 25c; milk, $3.60 cwt.—H. A. N., May 8.

Lancaster County, Pa.—There has been a great deal of wet weather which has hindered the farmers but oats is sown and there is some corn planted. Wheat is commencing to grow, but in many fields the plants are thin on the ground. There is a marked increase in potato acreage. Potatoes have advanced in price during the last few weeks, now $1.50 bu. Eggs very plentiful, 23c. Dairy cows are high in price and horses have also advanced. Butter, 50c.—R. C. R., May 10.

Lebanon County, Pa.—Much rain during month of April; as a result of this some oats is to be sown yet. Most of plowing done for corn, some are harrowing and preparing the soil for planting. Some potatoes planted. State roads being repaired and put in condition for the summer traffic. Crops have not made much growth thus far, due to the wet and cold weather. Some grass and wheat fields appear good, while some are in a poor condition. Indications are that fruit will not be so plentiful this year. Prices: wheat, $1.30, corn, 90c, oats, 50c; butter, 55c, eggs, 26c.—P. L. M., May 4.

Lehigh County (Upper), Pa.—Spring has arrived at last. Trees full of blossoms. Potato planting has been just about finished. The acreage planted is about as usual but would have been larger had there not been a shortage of seed potatoes. Old potatoes are scarce and price is rising. Trucks from every city for quite a distance are going from farm to farm buying up the last load or last bushel from the farmers. Grass fields generally look good. Alfalfa fields in some cases were winter killed. The wheat crop looks very poor. Most fields cannot expect more than from 40 to 50 per cent of a crop. Plants were too small last fall and so were winter killed. Some fields have been plowed for corn and oats. The rye fields look pretty good, fair crop anticipated. The schools of the different townships had their regular spring examinations. Most of the pupils will enter high school next fall. Commencements will be held in June. Roads are being repaired. The dirt roads in most places were in worse condition this spring than ever before. Many were impassable. Wheat, $1.25; corn, 80c; potatoes, $1.20; butter, 45c; eggs, 26c.—G. J. R., May 5.

Passaic County, N. J.—The weather for the last month has been rather cool with very little rainfall and a series of frosts the last week of April which did a little damage to the peach blossoms. Apple trees in full bloom, also sour cherries and some varieties of pears. The blossoms have fallen from sweet cherries and some varieties of pears. Grape buds are swelling. Farm work is about average, even with the cold weather. Plowing is about done and planting of all things well under way. Strawberries look fair, starting to show buds. Raspberries are pretty hard hit with anthracnose and show a good many dead canes. Blackberries good. Asparagus in Paterson market last week brought $6@6.50 per dozen bunches. Other prices are: spinach about $1.50 bu.; frame lettuce, $4.50@5 bbl. for good headed goods; rhubarb, $3 per 100 bunches.—N. D., May 8.

Somerset County, Pa.—Weather cold and rainy; snow 23rd and 24th; temperature 18 above on the morning of the 25th. Roads in fairly good condition; some work being done on them. Not much oats sown as yet. Lots of chicks being raised this spring. T. B. testing is well under way in Brothersvalley Township and out of 400 cattle tested only one had T. B. A very good showing. Prices: eggs, 22c; butter, 50c; oats, 55c; wheat, $1.40; buckwheat, $1.60 cwt; hay, $15; veal calves, $11 cwt.—H. W. B., April 27.

To Head Market Bureau

DR. F. B. BOMBERGER, Chief of the Maryland State Department of Markets, has been granted a year's leave of absence so that he may organize the work of the newly established Marketing Bureau of the Del-Mar-Va Eastern Shore Association at Salisbury. The new bureau will work for the standardization of Del-Mar-Va farm products and for better distribution methods. Chief Inspector S. B. Shaw will head the State Department of Markets in the absence of Doctor Bomberger.

The Market Place

By W. R. WHITACRE,
Pennsylvania Bureau of Markets

SOME wise man once wrote that, "The early bird catches the worm." I have sometimes doubted the wisdom of his statement, especially on a dark, cold morning, but the produce men have taken it to heart. When summer comes and green stuff is arriving, their day's work begins at 12 o'clock, midnight. The buyers come around 5 A. M. and most business is over by 10 A. M. Of course, some later sales are made but most of the trading is done in the early hours.

Dock Street, in Philadelphia, is the busiest street in the world during business hours. The fact that it is so crooked is no reflection on the men doing business. Dock Street got that way because it was formerly a creek and as the city grew they decided to cover it with a huge brick culvert. Gradually it was filled in and paved and finally it became a center of the produce business.

Even in the early days when William Penn was living there was a market house near Dock creek where farmers gathered to sell their products. In an old book I read that a woman with a boat load of pumpkins fell overboard and was drowned in the creek.

In our work we call on the produce dealers and inquire about prices and general market conditions. There are hundreds of stores but we usually stop at about sixty each day. This first place is handling berries and sweet potatoes.

"Good morning, Max, did you get any fresh berries?—Where did they come from, North Carolina?—Aren't they moving so well?—What did you get for them? They are sort of wasty; too much rain?—Then you think $4.50 to $6.00 is the market price?

"Did you have any other fresh stuff in last night?—What did you do on sweet potatoes?—Mostly $1.25-1.50 on Jersey hampers? Well-so-long."

That's the way it goes, only some do not come across with information as well as Max. It is like pulling teeth and before they tell you anything they want to know what everybody else is doing. Some are grumpy, some want to tell you stories and most are just regular fellows.

This has always puzzled me: the firm that asks the most favors and demands the most service is usually the one that is hardest to get any real information from. But that is part of the job. This market is not exactly like a Sunday School, yet if you know where to look you can find a lot of good.

There is an old blind colored man who makes his quarters on Dock Street. He walks along tapping his cane, if you watch closely you will see all classes and types of men drop a coin in the cup, guide him across the corners, stop their heavily loaded hand trucks to let him pass. But you will have to watch closely for Dock Street doesn't make a fuss about such things.

Here Are the Champion Counties

LEHIGH COUNTY had the highest value of crops per farm of any county in Pennsylvania for the year 1926.

Lancaster led in total production of corn, wheat, tobacco and hay; in number of cattle on farms; in number of chickens on farms and eggs produced; and in number of farms having automobiles and tractors.

Berks produced the most oats while Lawrence and Beaver Counties secured the highest yield per acre.

Philadelphia County produced the most wheat and corn per acre.

Berks County led in production of rye.

Bradford raised the most buckwheat, while Adams secured the highest yield per acre.

Adams County produced more than 1,500,000 bushels of apples, 500,000 bushels more than Franklin, the second highest.

Franklin County produced 187,000 bushels of peaches, 34,000 bushels more than Allegheny, the second leading county.

Montgomery County produced the most pears.

Lehigh produced almost twice as many potatoes as any other county, while Lackawanna and Wyoming had the highest yield per acre.—Pennsylvania Department of Agriculture.

AT LEFT: Mowing and raking alfalfa in one operation with the Farmall, 7 ft. Farmall mower, and combined side rake and tedder. An ideal combination for speeding up operations and improving hay quality.

BELOW: Raking over 100 acres of hay a day. The rakes are dumped by trip ropes. This outfit is used on large acreages and is considered the most economical way of taking hay.

Modern Haying Calls for McCORMICK-DEERING Power & Hay Tools

THE McCormick-Deering dealer has much to offer you in hay tools and haying methods that turn alfalfa and grass into the greatest profit in the least time. He can show you the new Farmall and the full line of McCormick-Deering Hay Tools that work with it. Or he can show you an equally complete line of horse-drawn tools.

Think of the speed with which the Farmall operator above is turning alfalfa into crisp, air-dried hay. Once over the field and the hay is ready for the mow or stack. That's new haying efficiency.

The same speed and efficiency applies to every operation, whether you favor self-dump rakes, combined side rakes and tedders, or sweep rakes. Mowing, raking, stacking—all are speeded up, resulting in money-saving labor economies and hay that tops the list in feeding and market value. We assure you that your local McCormick-Deering dealer can offer you equipment that will completely satisfy you, whether you operate your farm with horses or power.

INTERNATIONAL HARVESTER COMPANY
606 So. Michigan Ave. of America (Incorporated) Chicago, Ill.
93 Branch Houses in the U. S.; the following in Pennsylvania Farmer territory—Elmira, Harrisburg, Philadelphia, Pittsburgh.

McCORMICK-DEERING Hay Tools

With a McCormick-Deering Tractor or Farmall hooked to the rack wagon and loader, the hay passes from windrow or swath to the load in quick time. The steady forward speed, up hill or down, is a great aid to the man on the load.

FARM LANDS

Police Protection for Farm Homes

(Continued from page 3)

crowd that was beyond the control of a dozen pushing, sweating, swearing city policemen. I used to wonder how he did it."

"That was simple," said the Troop Captain. "The State Police Trooper knew what he was going to do, and the crowd knew he was going to do it. That is all there was to it."

We would go a little further, however, and say that one State Trooper had more power than a dozen city policemen because the crowd knew that he meant business and they knew that he was right. The city "cops" were wrong enough at the time to lose the crowd's respect.

They Know the Law

That is the second reason for the effectiveness of members of the Pennsylvania State Police,—they know they are right.

They know the laws of the state; they know them so well that occasionally a Trooper resigns to take up the practice of law. They are so thoroughly schooled in court procedure and the rules of evidence that more than eighty per cent of their arrests result in conviction, a remarkable record.

Finally, the Force is effective because it is mobile. It is widely scattered but it is never out of touch with headquarters and it can travel swiftly. The five Troop headquarters are located one near the center and one near each corner of the state. Troop A is at Greensburg, Westmoreland County; B at Wyoming, Luzerne County; C at Reading, Berks County; D at Butler, Butler County; E at Harrisburg, Dauphin County. The School Troop is at Hershey, Dauphin County.

Each troop Captain is assigned certain counties. Dividing the men of his company into groups of from two to seven men, he establishes them in sub-stations scattered throughout his territory.

The five district headquarters are in communication with the superintendent's office in Harrisburg day and night by radio and wireless telegraph. Each substation in turn is in constant touch with the district headquarters by telephone.

The Force Travels Swiftly

No matter where in the state an emergency arises, an officer is nearly always on the way within five minutes from the time the call is sent in. If the situation is grave the word goes out to the whole district and patrols start closing in from every direction, the nearest arriving on the scene first and the others as fast as motorcycles and automobiles can bring them.

Late one afternoon a few months ago a tip was received at Harrisburg headquarters that plans were being laid to lynch three negro murderers lodged in the Media jail, near Philadelphia. The word was flashed to Captain Gearhart of Troop C at Reading and in spite of the fact that many of his men were in court at the time, fifteen of them were on the road to Media within thirty minutes. Before ten o'clock forty-five State Police from the entire southeastern quarter of Pennsylvania were patrolling the vicinity of the jail.

We have it on the authority of Major Wilhelm, the Deputy Superintendent, that the Pennsylvania State Police would be able, under ordinary traffic conditions, to concentrate practically half the entire Force at any point in the state on four hours' notice.

(To be continued)

"One man is knocked down by an automobile every twelve minutes in Los Angeles."—News Item.

You would think it would wear him out.

Veterinary

Conducted by Dr. J. F. Shigley
Associate Professor of Veterinary Science, Pennsylvania State College, and Veterinarian in charge of College Livestock.

Advice thru this department is free to our subscribers. Each communication should state history and symptoms of the case in full; also the name and address of writer. Initials only will be published. We invite readers to make use of this service. Clippings from the column when properly preserved and classified, make one of the most valuable medical symposiums a farmer-stockman can obtain.

DIFFICULT URINATION.—I have a part Jersey and Guernsey cow that freshened on March 7 and since then she seems to have difficulty in trying to urinate. She seems to be perfectly all right otherwise.—V C.M., Belsano, Pa. This condition is undoubtedly due to injuries to the animal at the time of calving. You would do well to douche her two or three times weekly with a solution consisting of one tablespoon of salt in two quarts of warm water. Allow plenty of exercise and access to good, clean water.

CONTRACTION OF THE HOOF —I am trying out a horse afflicted with a bad case of contracted feet caused by using him on the hard brick pavements. Having removed his front shoes, I wish to know if the horse is fit for work on the farm or should he be rested by putting him out in low pasture until his feet soften up. By resting him out in pasture will the horse come along all right for farm service? I don't want to use a horse unfit for service or one that is in misery and the horse after a week's work shows no signs of improvement and walks just as stiff as before.—R. L. P., Lycoming County, Pa. The horse may be turned out to pasture as suggested. This may be an expensive policy for you but it is a ready means of improving the condition. This horse may be used for farm work, either bar-foot or with shoes, depending on the degree of lameness. If shoes are used the bearing surface should incline downward and outward with the heels wide. Hoof pads of rubber, straw, rope or cork may be used if better protection can be afforded. A spring known as a Chadwick spring may be used to aid in spreading the heel. Keep the hoof moist and exercise the horse daily.

DOG HAS "SPELLS".—I have a dog one year old which has spells, like a running fit. He will take to barking and will run as if something was after him. Then he will creep in some dark place and become quiet. He never attempts to bite but just seems as if nearly scared to death.—W. C. P., Washington County, Pa. One should be careful about over-feeding, feeding too much starchy foods and feeding on an irregular schedule. Meat should form the major portion of the diet as the dog is a carnivorous animal. You would get better results in the removal of worms if you would secure the drugs from your veterinarian. Worm medicine, such as is fed to children, may be given and in about the same dosage. But this is not specific and usually not as efficient.

Our Readers' Classified Advertising Department

A market place to buy or sell at little expense. Over 100,000 farm families read Pennsylvania Farmer every week. Rate 6 cents a word each for one, two or three consecutive weekly insertions; 5 cents a word each for four or more insertions. Count each number and initial and send cash with order. Orders, discontinuances or changes of copy must reach us by Wednesday of week preceding date of issue. All advertisements set in uniform style, no display type or illustrations. Poultry advertising may run here, but if displayed or illustrations used must run in display advertising columns at commercial advertising rate (65 cents per agate line). Livestock advertising not accepted in this department. **Minimum, ten words.**

Friendly Talks

By EDGAR L. VINCENT

"I'LL give you a boost up, Joe."

"And then, when I'm up, I'll pull you up, too, Billy!"

Just a couple of little chaps standing at the foot of an old apple tree. They did not realize it, but they were preaching a good sermon. Boosting and pulling over hard places.

There are lots of hard jobs in this world, many a rough tree to be climbed; and sometimes it seems quite impossible for us to do the hard task or climb the tree. Just now I know a man that is wading more than knee deep in trouble. His life companion fell and broke her hip and had to go to the hospital. Nobody but the dear good woman can bear the pain. There is only one man who can sit by her side and hold her hand till the pain passes away.

But, oh, the many friends who say, and say from the heart, "I'm so sorry for you!" And they all show in other ways that they do feel the sting of the hurt which has come to the friend of many years. Flowers and letters and nice knicknacks every day coming in—how they do say in effect, "I'll boost you up the very best I can!"

Friends Make Dark Times Easier

Times come when it seems to us that life is pretty much one long series of difficult things, one right after the other. We wonder why it is so, and it may be we find fault about it. Who ever had such hard things as this to bear? But is it not true that friends everywhere turn our trouble into an opportunity to prove how good their hearts are? And this they might never have had a chance to do if we had not somehow slipped and fallen on life's icy pavement. They are not happy because we have misfortunes, but they are glad a time has come when they can boost us up the tree!

Once in a while I hear folks say that the world is all going bad; that most men are looking for a chance to tear somebody down; and they find in some things that are done in political and commercial life proof of what they say. It is true that this is not a perfect world yet. Most of us have a great many lessons in kindliness and goodness to learn. Thousands seem to dwell upon the darker side of life and let themselves think that there is nothing better anywhere.

Each Good Turn Repays Us

But these folks of the doubt-dimmed vision are mistaken. It may be it will take some awfully hard knocks to show them how good the world really is. It has to be that way sometimes, and are we not sorry for these people when the dark hour comes; and yet we are more glad than we are sorry because the bitter days afford us an opportunity to tell just what is in our hearts.

And there is something queer about all this. Billy gives his little friend Joe a boost up the tree. Gratitude makes Joe want to turn around and pull Billy up by his side. It may not always be possible for the man we boost to help us into a good place in politics, or anywhere else; but even tho he never can pay us back in the coin of the realm, we get our pay a thousand times over in the warm glow that comes into our hearts at the thought that we have done somebody a good turn. And this fire in our hearts, set by the good deed we have done, makes us better and kinder and truer men and women.

Buick

How far will your car go *before* the miles begin to tell?

If you buy a new car every 10,000 miles or so, almost any car will give you satisfactory results.

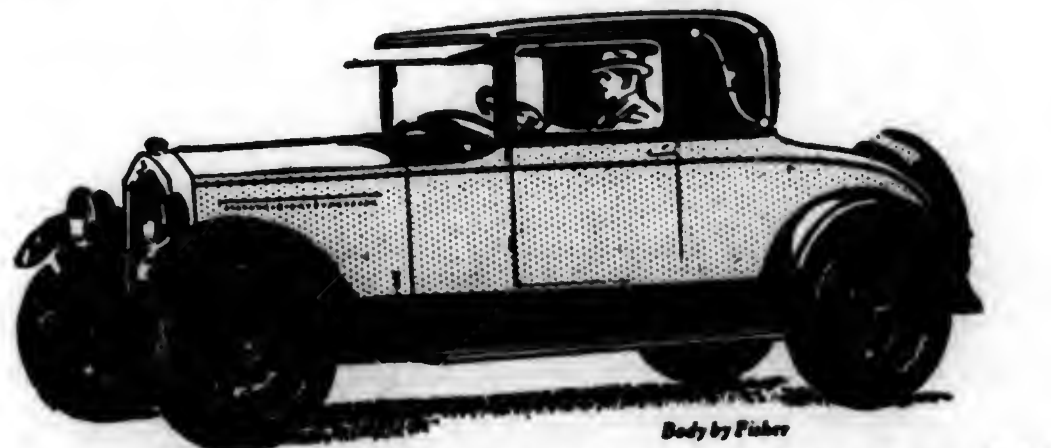
But if you want the same fine service on through the second, third and the many following tens of thousands of miles, buy a Buick!

Accurate tests at the great Proving Ground of General Motors, where all cars are driven and examined, show Buick's sturdy structure and powerful Valve-in-Head Engine still gaining in efficiency at the point in miles where other cars are distinctly on the down grade.

The unremitting care in Buick design, the constant tests at the Proving Ground, the unceasing quest for better performance—these are responsible for Buick's superior efficiency.

Savings resulting from enormous volume production make possible this extensive research as well as the superior construction for which Buick is internationally famous. Buick cars are built for greater satisfaction to their owners.

Buy a Buick for years of exceptional service.



Body by Fisher

COUPES

$1195 TO $1925

All prices are f. o. b. Flint, Mich., government tax to be added. Buick delivered prices are lower because the smallest possible handling charge has been established by the Buick factory.

The G. M. A. C. financing plan, the most desirable, is also available.

The model shown is the Two-Passenger Coupe, Series 115, $1195.

WHEN BETTER AUTOMOBILES ARE BUILT, BUICK WILL BUILD THEM

Important To Employers!

The Workmen's Compensation Act became effective Jan. 1, 1915, but it seems some employers ignore their obligations, intentionally or through misunderstanding. Failure to provide protection to employes makes the employer liable to a heavy fine in addition to the paying of benefits in accordance with the Compensation schedule.

Our Policy furnishes complete protection as required by the Compensation Act, and if the employer wishes, we can protect him against accident, while engaged in his work, or at all times during the day and night.

Our policyholders are receiving a large return premium each year. (17½% was returned to them in 1924 and 1925) when their premiums were above the minimum.

Concrete Sidewalks Mean Less "Broom and Mop" Work

Hours of housework—harder work than most men realize—are saved daily by a concrete walk and pavement at the door.

Floors, rugs, in fact the entire house is easier cleaned and stays so with less effort.

Build CONCRETE Walks Yourself!

Build labor-saving concrete walks around your house when other work is not pressing.

Easy-to-follow instructions are given in "Permanent Repairs on the Farm." Write today for your free copy.

PORTLAND CEMENT ASSOCIATION

A national organization to improve and extend the uses of concrete

2151 Jenkins Arcade, Pittsburgh, Pa. 1315 Walnut St., Philadelphia, Pa.

Concrete for Permanence

Here's a Money Saver

With this Handy Farm Mixer you can make your own permanent improvements out of everlasting concrete and save about half the cost.

You can put in new walks and steps, make feeding and well platforms, put in concrete floors in your chicken and hog houses, stables and cow barns—make dozens of improvements that materially add to your convenience and to the value of your farm.

The "Handy" will thoroughly mix a wheel barrow load per minute. All metal construction—lasts for years. Can be operated by hand or with small engine. Used also for mixing slops, washing root crops—useful the year around.

You will be surprised at its low cost. It will actually pay for itself on a job or two.

If your John Deere dealer can't supply you, write us.

A Booklet Full of Helpful Suggestions—Free

"One hundred and one farm uses for concrete" points out many ways for profitably using concrete on the farm. Write to John Deere, Moline, Illinois, and ask for booklet MS-936

Frost & Wood

MOWER

One Horse and Two Horse Sizes

Popular throughout the world for many years. Thousands of satisfied users. Built for heavy crops and rough and hilly land. Roller bearings assure light draft. Its cutter bar strength and superior cutting mechanism give long service.

The Internal Drive Gear is always ready for work in heavy or light crops. Quicker response at knife bar, less wear on gears and fewer repairs. The knives keep on cutting when bar is raised to clear obstructions, saving time and crop.

Sizes 3½, 4, 5, 6 and 7 feet.

Write for catalog describing Frost & Wood Mowers; Sulky Rakes, with wood or steel wheels; Side Delivery Rakes; Hay Loaders; Corn Binders, etc.

Guaranteed by us and our dealers.

EUREKA MOWER CO.

Box 1502, UTICA, N.Y.

For Barn Sanitation

Agricultural Gypsum

It keeps down flies and odors in barns, poultry houses and other buildings. Increases value of manure. Adds lime and sulphur to the soil. Many other uses. 100-lb. bags, freight prepaid, only $1.50. Special price carload lots. *Write for valuable free book.*

It Will Be Our Own House

So Every Room, Kitchen Included, Must Be Right

By ARTHUR C. PAGE

WE WERE pretty well agreed last month that the first thing of importance for the new house is a good foundation, and a big, clean, roomy, dry basement.

In planning the house we will first talk about the kitchen. If anybody wants to argue about whether it is the most important part of the house, we will assert that it is used more hours of the day, and for a greater variety of purposes than any other room, and furthermore much of the work there is done when everything is in a hurry and every moment and every step counts.

One thing is sure about the location of the kitchen. The windows in it must be so that mother can see the front gate and the road and get a pretty good view over the barnyard. Any busy housewife who has to keep track of everybody who comes into the place, and meet everybody who comes to the door, will understand.

We Vote for the Large Kitchen

Shall the kitchen be one of these strictly modern, cute little kitchens, such as are found in city homes and apartments, or shall it be a large roomy one like we have had in farm homes for many years? Well there is a chance for a merry argument. You can prove by statistics and a good many of the newer bulletins and essays on house planning that the small kitchen, with everything close together and no waste space, is the only proper idea. The big wide kitchen, with room enough for a family to eat at one end, is terribly old fashioned, so we have heard. Well, this is going to be our house, and we are the ones who are going to live in it, so we are going to have a large kitchen. This may be old fashioned, but like an old shoe it will be comfortable.

Then there is the question of the family eating in the kitchen. There was a time when it was very bad socially. However, because so many persisted in it anyway, house designers have finally given in, and now they dignify the custom by providing a special breakfast nook where it is perfectly proper to eat at least one meal a day.

For the family with plenty of help, where the extra carrying and many steps don't mean so much, it is very nice to have all meals served in the dining room, but where mother has to do it all, not sitting at the table with the family until the very last of the meal when pancakes are being served for breakfast, there is an enormous saving of strength in having the family eat in the kitchen. During the canning season all that space is doubly useful. If sister in high school wants to have a party of her friends to pop corn or have a taffy pull, there is plenty of room, and mother doesn't have to hold her breath for fear some bashful boy will drop a large sticky gob of taffy on her best rug.

We Want No Taffy on Our Best Rug

In other words, you may argue all you please but we are going to have a large kitchen.

For some of our friends, who are going to be a little more modern, a nice breakfast nook will accomplish some of the same results, and we would urge that it be included in the plans.

In arranging the kitchen we have to provide for stoves, sink, work table, a pantry and cabinets. On one side we will have a dumb-walter going down to the basement, which will save a lot of carrying and unnecessary steps.

Talking about stoves, we will probably have two, one of which will be a wood and coal range, and the other a gas or oil stove. The range will be used in heavy cooking and in spring and autumn when a little heat is needed, it will save firing the furnace. The oil or acetylene gas will be for summer cooking, and all sorts of special times when a quick fire is needed. It will be just as convenient and cost no more than the gas which our friends use in the city.

Cabinets Will Be Big Enough

We are not yet decided about cabinets. There are some wonderful kitchen cabinets which are almost a whole kitchen in themselves, and these can now be bought either separately so they can be moved into any kitchen, or they can be bought in such form that they are built in as part of the construction. You can get almost the same advantages either way, and we are not sure yet which one we will decide on. One thing we know, there are going to be plenty of shelves and drawers, because we are good and tired of having to pile things on top of each other and stack them up inconveniently so that if mother is in a hurry to get some particular pot or kettle the whole pile falls down with a clatter that sounds like a calamity.

From the Week's News

THE Iroquois tribe of Indians still owns 20,000 acres of land in New York State. Several years ago, when the European corn borer got its foothold in New York, the Indians enacted a special corn borer law of their own for the protection of the corn grown on the reservation. They have been observing voluntarily the strictest kind of control regulations.

§ § §

THE DOG CATCHER seems to be one of the best friends of the law-abiding dog in Pennsylvania. Altho the field representatives of the State Bureau of Animal Industry try to catch all stray, unlicensed dogs, they also have instructions to spare no effort in apprehending persons who maliciously poison dogs. One dog-poisoner in the western part of the state paid a $100 fine and is spending 30 days in jail for his offense.

§ § §

THE USE of 30-quart crates for farm products is not legal in New Jersey. The legal containers are those holding one pint, 1, 2, 8, 16, 20 or 32 quarts. The State Department of Agriculture recommends 20-quart containers for tomatoes, for in them the product is subjected to less weight and pressure than in the larger packages commonly used.

§ § §

A TOTAL of 306 counties is now on the modified accredited list of the United States Department of Agriculture. All of the cattle in these counties have been tested for tuberculosis and not more than one-half of one per cent have reacted.

§ § §

AT A RECENT CONFERENCE of New Jersey's Potato Improvement Committee held in the Department of Agriculture offices at Trenton, arrangements were made for a joint meeting of potato growers and dealers to be held at Englishtown, Monmouth County, Thursday evening, May 26th. Tentative plans also were made for another general meeting of farmers and potato dealers on Thursday, June 23, at the farm of H. E. Hulshart, a large grower located near Allentown.

The Governor Clears Up His Desk

Fisher Vetoes or Approves the Last of the Bills Passed by the Legislature

THE accompanying article outlines some of the outstanding work of the recent session of the Pennsylvania legislature. The difficulty of giving a complete review may be judged from the fact that the legislature passed 1076 of the 2352 bills introduced. Of those passed, Governor Fisher approved 841. Of these, 494 were general laws and 347 appropriation bills. The Governor vetoed 177 bills, the most since 1917. About 100 of the new enactments were passed to repeal old laws already on the books.

WHAT did the 1927 legislature do for the farmer? This is a question that can be answered now since Governor Fisher has finished his gigantic task of approving and vetoing over 1000 bills.

While it is impossible to review all the new laws which directly or indirectly affect agriculture, a few outstanding things can be mentioned to show that the farmer was certainly not overlooked by the lawmakers.

First, a total of $2,500,000 was passed and approved by Governor Fisher to pay cattle owners for loss suffered from having cows react to the tuberculin test. This amount is the largest sum ever appropriated by one legislature in the history of the state.

College and Department Funds Increased

An appropriation of $270,000 was made for important research work in agriculture at the Pennsylvania State College. Altogether, State College was given $4,000,000 for use during the next two years. This amount is to be used as follows: $2,100,000 for general maintenance; $270,000 for agricultural research; $630,000 for extension work in agriculture and home economics; $1,000,000 for new buildings.

Funds provided for the State Department of Agriculture for the next two years were also substantially increased to take care of important lines of work which directly benefit farmers. One hundred thousand dollars was provided to fight the European corn borer and a similar amount to control the Japanese beetle. When including the appropriations which were formerly made from the dog fund and other special funds, (these funds were eliminated by the legislature and all such revenue will hereafter go into the general state fund), the total amount for the use of the Department aggregates approximately $5,000,000.

In adding almost 1200 miles of road to the state highway system, the legislature has made provision to take care of many districts which have not had proper highway facilities. It was largely on the strength of the argument that additional funds were needed to build and maintain roads that Governor Fisher was able to secure the passage of the three-cent gasoline tax, the additional cent tax going into effect July 1, and remaining as an emergency tax until June 30, 1929. Kerosene, gas and fuel oil are exempted from the tax. Another important feature of the new gasoline tax law is that consumers who import gasoline for their own use must pay the tax the same as when buying from a dealer in the state.

Perhaps the most spectacular feature of the legislative session was the election reform fight. The accomplishments of this battle for cleaner elections are briefly as follows: The mandatory opening of ballot boxes upon petitions alleging fraud or substantial error; limiting assistance to those voters who are unable to read or see the ballot; the elimination of "dissemination of information" as a legitimate campaign expense item; the creating of a commission to codify the election laws and suggest remedial legislation.

Armory Fund May Provide Farm Show Space

Governor Fisher vetoed a bill which was designed to make certain more adequate housing facilities for the State Farm Products Show in Harrisburg. This bill provided for an appropriation of $450,000 to be used for the construction of an armory and farm products show building. Governor Fisher explained that an appropriation of $1,000,000 for armory construction was being approved and that Harrisburg's needs would be taken care of out of this fund.

For farmers who deal with commission men, certain amendments made to the Bureau of Markets law will be of interest. The new law gives the state the right to investigate (to page 11)

Police Protection for Farm Homes

The Rural Patrols of Pennsylvania State Troopers Keep the Marauders Worried

By C. L. WHITE

(Continued from last week)

WE SAT in Captain Gearhart's office in Troop C headquarters at Reading a few weeks ago, talking about the work of the Pennsylvania State Police in farming districts. Thru the window we could see several of the station's twenty-two horses, wiry range-bred stock from Texas. Those off-duty horses were running and kicking, biting and pawing like a lot of playful puppies.

As we watched, four Troopers rode away to spend the afternoon patrolling the country roads of Berks County. They were the only men from that station not busy on special work. The next day they, too, might be running down chicken thieves or doing detective work in plain clothes in another part of the state.

These officers are the only visible arm of the law in the back country districts. They may not pick up criminals or marauding tramps every day, but they keep their eyes open. Without appearing to take particular interest in anything they watch for suspicious characters, for clews to unsolved problems, for anything wrong and for anyone needing help. They may stop to put out a farm fire, or, in summer, to arrest plundering picnickers and to notify a farmer that the cows are in the corn.

Prefer Horses for Rural Patrol

Each black-garbed horseman on patrol duty has a certain route to cover. The public doesn't know when he will come along, but an officer at the barracks knows his route and knows just how he may be reached by telephone in case of an emergency.

At first thought it may seem that the patrols would be more effective if they used motorcycles and covered more ground. We asked Major Wilhelm about that. He said: "We prefer horses for patrol work." The reason was that the man on horseback sees more and hears more than the driver of a motorcycle or automobile.

Captain Gearhart emphasized this need for closer contact between Troopers and farmers. Suppose, he said, that John Jones loses some chickens. He reports the theft to the nearest State Police sub-station. An officer is sent to investigate. Two weeks pass and no thieves are arrested. The officer has some evidence, but he doesn't have quite enough to convict the suspects. Meanwhile thieves loot the chicken house of Jones' neighbor. He says, "Well, Jones got no results when he reported to the State Police, so there's no use of my reporting."

Detective Work Covers Wide Range

Now in all likelihood, the same thieves raided both flocks. They probably left clews in the second theft that would have made an iron-bound case against them. But the trooper never hears of the second raid, so the thieves never are arrested.

Captain Gearhart let us read his men's reports on a number of recent investigations they had made in Berks County. Some of these matter-of-fact recitals of the Trooper's activities were as interesting as any detective stories.

A barn burner was caught because the detective-police officer noticed some grease that had been scraped off onto roadside brush from the axle of an automobile with a peculiar kind of tires which a mail carrier remembered delivering several months ago.

Some chicken thieves were trapped by the leg-bands of some of the birds they had stolen and sold.

A man who had been helping himself to a farmer's feed bin found a Trooper waiting for him in the barn one night.

The nightly shrinkage in one man's corn crop stopped suddenly when one of the Troop C men arrested six thieves who had been carrying away the ears in sacks.

An entirely different kind of detective work was done by Major Wilhelm's men in Chester County in 1925. A series of mysterious barn fires had been terrorizing the county. It was just after harvest time and one barn after another went up in flames with all its contents. Farmers couldn't sleep nights for fear their barns would be the next visited. They organized watches and guards, but in spite of the constant vigil no pyromaniac was caught and barns continued to burn.

At the time Major Wilhelm was in charge of the Bureau of Fire Protection. His officers were on the job day and night in the afflicted area. But they were doing more than looking for firebugs. With the cooperation of the Pennsylvania State College they collected a vast amount of data proving definitely that most of the barn fires were the result of spontaneous combustion or self-ignition. They also found ways that such fires could be prevented. When their case was complete the farmers of Chester County were invited to hear the evidence.

Skeptics Hastened Home to Test Hay

If there was skepticism in the audience when that meeting opened there was none when it closed. The skeptics went home to jab dairy thermometers fastened to broomsticks deep into their haymows and to call for help if the temperature was near the danger point. They resolved thereafter to store only properly cured alfalfa, and to spread it out in the mow, not letting it lie in compact masses as it dropped from the hayfork. A bulletin summarizing the results of these investigations of mysterious (to page 21)

OUR JOB is to serve our readers. Whenever you are puzzled write to us and we will help you if we can.

"If you fear it will be known, don't do it."

Final Drive Against the Borer

THE final clean-up drive against the corn borer is now on in the counties affected. Inspectors are being increased so that every farmer may be seen personally. Already, more than 200 farmers in Pennsylvania and New York have been served with notices because they failed to "clean up" according to directions. If the plan is to be efficient it must be adopted and worked by every farmer in the infested district. The neglect of one dilatory man in a neighborhood may make the good work of all the others of little use. It is the government's purpose to make a thoro job of the work and the directors should have the loyal cooperation of every farmer.

Over Production of Oil

FARMERS are not the only ones guilty of overproducing. The oil producers of the country have been drilling and pumping furiously during the past year and they now find themselves loaded with coal oil and gasoline in amounts far beyond consumption needs. Prices have slumped to figures lower than they have been for years due to the price war resulting from large stocks. It is said that some companies have been forced to borrow heavily to carry them over the crisis. Of course, the public profits temporarily, but as with farming, overproduction and losing prices injure all in the end.

What and Why?

THE newspapers carry the report that the Pennsylvania Federation of Labor adopted two rather questionable resolutions at a recent meeting. One was that the prohibition law be so amended as to permit the manufacture and sale of two and one-half per cent beer, and the other that the State Police be abolished. Since beer drinkers have said that two and one-half per cent beer was "no better than dish-water," we fail to see any advantage in changing the law. But maybe they reason that, since some brewers are alleged to be making high-power beer under the one-half per cent law, a two and one-half per cent law would give them something with a kick like a vicious mule. But just where is the logic in the demand for the abolition of the State Police? Shall the rural communities be denied even the insufficient protection of this efficient body of men? They have proven their worth and use every day, and this without any infraction of the rights of law-abiding citizens.

Crop Conditions and Prospects

THE cool, wet spring has delayed the planting and preparations for planting corn to such an extent as to send the price of corn up recently. The 1927 crop is not getting off to a good start, and while there is still time for the making of a full crop the season has not been favorable so far.

The Department of Agriculture report on the condition of wheat shows an estimated crop about 33,000,000 bushels less than last year. The condition is a little better, and the acreage abandoned is somewhat less than last year, but the estimated decrease in the crop is due to a smaller acreage sown last fall.

Cotton, the weakest sister of all the crops last year, due to the great surplus, promises to be in better condition this year because of the devastation caused by the Mississippi flood. An area normally producing about 2,000,000 bales will be unavailable this season because of the overflowing water.

Three Cents a Day for Milk

THE Dairymen's League News quotes the statement of a research bureau to the effect that the per capita expenditure for milk is only three cents per day. Surely, there is room for all educational and health authorities to do a lot of work before the human race as a whole awakes to the economy and efficiency of milk as a regular part of the diet.

Forty-seven per cent of all the milk produced is used as whole milk, twenty-five per cent for making market butter, eleven per cent for farm butter, and seventeen per cent for ice cream, cheese, condensed milk and other miscellaneous commodities. Evidently, the greatest field for the expansion of the dairy industry lies in expanding the whole-milk sales, and this can be done only by educating the public to the value of milk as a regular part of the diet. In many families milk is looked upon as a luxury for well people, a necessary but regrettable expense for children and invalids. In such families, even the little tots are "weaned" from milk as soon as they can get a goodly amount of solids. The average family spends more every year for tobacco, confectionery and cosmetics than it does for milk.

Shake-up in Farm Loan Board

WHILE there has been more or less friction between the Farm Loan Banks and the Joint Stock Land Banks, both functioning under the Farm Loan Act and supervised by the same board, the farmer's concern is not with these differences. Three members of the board of directors resigned recently and President Coolidge has appointed three members of the War Finance Corporation, the best known and most active of whom is Eugene Meyer. Mr. Meyer has proved himself a big man in financial matters, but just how well his abilities will fit him for dealing with the farm loan questions remains to be seen. The farm loan system was designed to put farm financing in a class by itself, unhampered by the usual banking rules of short time and personal security. There has been continued opposition from some fields of the banking world ever since the law was passed, but we hope that these three new banking men will not fail to realize the need and purpose of the newer system for agriculture.

Holding the New York Market

THE Mayor of New York has concurred in the ruling of the Health Commissioner that the area supplying the city with milk shall not be extended at this time. This will, no doubt, be sad news for the milk bootleggers and other dealers, but it is a common sense ruling. The city has spent hundreds of thousands of dollars in promoting sanitary regulations in the district, and dairymen have spent a great deal more in meeting them. It would be the height of folly to have the market and the regulations disrupted by accepting milk from outside sources.

But dairymen in the New York area should not rest content with having won this victory. They must strive to improve the quality and increase the quantity if they are to continue to have a monopoly of the market. If New York needs more milk they must be able and willing to furnish it. If it wants a better grade of milk, they must also be willing to produce it. The holding of the New York market by those who are supplying it at present is strictly up to themselves.

Editorial Sidelights

MAJOR LYNN G. ADAMS, who is "The Captain of Troop A" in this week's true story of the State Police (Page 16), is now the Superintendent or chief commanding officer of the entire Pennsylvania State Police Force. Altho he is known as one of the country's greatest detectives, he has had a broad and varied experience in all lines of police and military work.

When he was in the Regular Army, Major Adams went thru some of the bitter guerrilla warfare that fell to the lot of our Army men in the Philippines. Early in the World War he was made a Captain in the Signal Corps, later being transferred to the Provost Marshall's Department. As Provost Marshall of Paris, he was head of the Military Police of that city during the trying latter days of the War.

THE MASTER FARMER nominations are coming in. There is every evidence of a growing interest in this plan to honor some of the outstanding farmers of our territory,—men who are good farmers and good citizens in every meaning of the word.

Anyone who wants additional copies of the score card for farmers and the directions for scoring that appeared in our issue of May 14th may obtain them from the Master Farmer Editor, Pennsylvania Farmer, 261 South 3rd Street, Philadelphia.

WE ARE GLAD that Mr. Page is going to have a sizable kitchen in that new house (Page 2). The room needn't be so large that roller skates will be required at meal time to cut down the traveling time between stove, cupboard and table.

But the kitchen should be large enough for popcorn parties, and the kind where the young folks dip hot maple syrup into bowls of snow, eating it as soon as it has cooled and hardened enough to be picked up in the fingers. Or don't they have those parties any more?

THE CHEERFUL PLOWMAN narrates this week how he literally "told the world," via the radio, how to do everything (Page 6). The artist pictures him as speechifying in fine style before the "mike," which doesn't square at all with our own experience in a large broadcasting studio.

We didn't feel at all like delivering an oration as we stood there before that contraption of metal and wire and springs called a microphone. Our uppermost thought was: "I wonder if this is really going out, or if someone has pulled a switch and cut me off."

The answer to that question came a few minutes later when some stranger called on the long distance telephone to ask for some of the details left out of the radio talk for want of time. It was the telephone call and not the radio that furnished the thrill of the evening.

FLOODS MILLION ACRES

No Special Session for Relief Legislation — Would Dam Spring Floods — Will Review Farm Tariff Rates.

Washington, D. C.

THREE hundred persons dead, 350,000 homeless, $350,000,000 damage to property and 1,000,000 acres of crop land inundated. This is the estimate of Secretary Hoover's relief organization on the results of the Mississippi River flood. It is also feared that many lives will be lost thru a lack of sanitation and the spread of epidemics.

It is now evident that President Coolidge does not intend to call a special session of Congress to enact flood relief legislation. To call an extra session now would mean a complete new organization of Congress, with the question of seating Vare and Smith in the forefront. Once organized there is no telling when the session would end. It might continue until this time next year. At least it would be a long time before any actual relief legislation would get thru, for it would be impossible to keep politics out of the question.

Loan System to Be Relief Agency

Instead of calling an extra session of Congress, the Federal Farm Loan system is to be the agency thru which the relief work will be carried on. A $10,000,000 finance corporation is to be formed by Mississippi bankers for the relief of farmers in the flooded area of that state. This corporation has been approved by Eugene Meyer, the new farm loan commissioner, who will approve advances of $4,000,000 by the intermediate credit banks to the Mississippi rehabilitation corporation. Similar finance corporations will be formed in other states in the flooded area.

Opposes Heavy Cotton Planting

The Department of Agriculture is assisting in the rehabilitation work in many ways, and it is now predicted that a considerable percentage of the flooded area will be planted this season. The Department is urging the planting of more forage crops and less cotton.

Outlines River Control Program

Two main points are emphasized in the flood control program submitted by Chester Gray, Washington representative of the American Farm Bureau Federation, to his organization. One is safety measures to protect life and property. The other consists of preventive measures.

To insure safety along the Mississippi River the levees must be strengthened and raised to a higher level. In some localities secondary levees should be constructed, and two outlets should be opened in the lower river to carry off the surplus water.

As a preventive measure a $10,000,000 appropriation should be made for surveying tributary rivers to see where storage dams can be constructed. These storage dams should be located so that spring freshets will be held back and each dam equipped for developing power so as to pay for construction and maintenance. A reforestation and forest preservation program should be inaugurated to prevent erosion, which blocks up the streams and causes them to overflow.

Canadian Hay Hits New York Prices

The United States Tariff Commission has ordered an investigation on all farm commodities on which the American Farm Bureau Federation has petitioned for an increase in the tariff, excepting canned and fresh tomatoes and peppers. Among the investigations to be conducted are those on flaxseed, onions, eggs, frozen eggs and egg products.

The Farm Bureau is preparing to file a petition for increase on hay from $4 to $6 a ton. New York, which is the largest hay producing state in the nation, is seriously affected by Canadian competition.

Radio Stations Must Take Turns

The Federal Radio Commission is busily engaged in trying to untangle the knots in the radio broadcasting situation. It is announced that the number of transmitters will be reduced from 730 to 375. It is said there will be close to 680 stations eligible to broadcast, but they will be compelled to divide the time with the reduction in number of transmitters.—E. E. R.

THE DOG FUND IS GONE

Department Gets Extra Money In Place of License Fees— To Start Triennial Census Road Fund Allotted.

Harrisburg, Pa.

FIGURES compiled on the appropriations made by the legislature of 1927 and approved by the Governor show the unprecedented sum of $5,000,000 allotted to the State Department of Agriculture. Part of this increase is due to the consolidation of the dog license fund with the moneys of the department. Hereafter the dog money will not be handled as one of the much discussed special funds for campaigns against diseases and pests. This large appropriation is separate from that made to State College and other educational institutions.

Reorganization Under Way

Steps for reorganization of certain forces of the branches of the State Department of Agriculture are under way, but they will be taken gradually and the work of the department will not be hampered. Selection of a new chief for the Bureau of Plant Industry to succeed C. H. Hadley, who went into the federal corn borer service in Ohio, will probably be announced soon.

Farm Census Starts Soon

According to arrangements being made at the State Department of Agriculture the farm census made every three years will be started inside of a month. The first census was made three years ago and developed some surprising facts about farming in Pennsylvania. Among the data to be gathered will be facts on telephone and electric service; home conveniences and milking machines. It is also announced that farms will be listed according to operation, whether fully worked, partly, run down or abandoned.

Lancaster Gets Most Road Money

Lancaster County is leader in allotment of some of the state millions for road purposes. Of the $5,000,000 given for state aid in road building, if applied for, Lancaster is allotted $170,000, Westmoreland $166,000 and York $153,000. There are 78,800 miles of township and county roads used as a basis of calculation. Of the $3,000,000 allotted for rewards for improvement of highways, etc., this year Lancaster leads with $107,000, with Westmoreland next with $100,000. This applies only to second class townships, 75,000 miles being the basis of working out the county allotments.

Convicted for Misuse of Ear Tag

The state has secured a conviction in a southern county for misuse of an ear tag which will set an important precedent. In this case it was established a cattle owner had obtained a tag indicating an animal has passed a tuberculin test and fraudulently used it. The animal was sold but the seller was detected.

Plan to Buy Lands

The State Forestry authorities are planning to buy lands for reforestry purposes for the first time in four years, money being available this summer under the appropriation act. There have been many offers made, but the Department is disposed to go slow and seek low prices.—T. C.

TAX PRODUCE TRUCKS

Gardeners Object To Levy on Interstate Trucking Business — Atlantic Cleans Up Hog Cholera.

Trenton, N. J.

THE new excise mileage tax on buses and trucks doing an interstate business will work out a hardship on truck farmers adjacent to the Philadelphia and New York markets, according to an analysis of the new law as worked out by the State Farm Bureau. It appears that trucks owned in New Jersey hauling produce across the state line must pay an excise tax of 1½c per mile traveled. Fortunately, the new law does not apply to farmers who own their own trucks and do their own hauling to markets. However, in both South and North Jersey market garden areas there is considerable in the way of commercial and neighbor hauling, which will have to bear this excise tax, and considerable protest has been registered with the farmer associations against this added marketing cost.

New Association Organized

Gloucester County dairymen have now organized a new county testing association which they believe will work more intensively than the three county associations to which many local farmers have previously belonged. Several of the Gloucester County herds are so large that it will take the tester two days to do the work. There is still room for another four or five new members in order to take up the full time of the tester. The Extension Service is cooperating in this effort.

Stage Hog Cholera Campaign

The Atlantic County Board of Agriculture staged a county-wide clean-up of hog cholera during the week ending May 21st. The work is in line with similar campaigns against hog cholera which have been in progress in Gloucester County, and similar to the drive against cattle anthrax as recently staged in Salem County. The record of the County Board of Agriculture during the last five years in fighting hog cholera is a pronounced story of success and to the point that officials of the County Board expect to have every hog farmer in the county inoculating his pigs during the course of the coming year.

Tomato Acreage Reduced

The reduction in the output of South Jersey canneries this season, coupled with a similar situation in other eastern tomato states, has brought about a definite reduction in acreage this season for tomatoes and similar canhouse crops. The Federal Department of Agriculture recently advised New Jersey growers that there are on hand some four million cases of tomatoes from last year's pack and that some states show surplus lots of canned peas, corn and other vegetables. New Jersey growers feel that by reducing canhouse acreage this year and putting their fields into cash crops, the bugaboo of surplus stocks which has been hanging over the industry for two years may be cleaned up.—W. H. B.

LEAGUE IS VINDICATED

Is Not Monopolistic, Court Decides, in Barnes Case Appeal—New England Roads Raise Milk Freight Rates.

Ithaca, N. Y.

THE famous Barnes case, a test case selected from twenty similar ones in 1922, charging the Dairymen's League with restraint of trade and monopolistic methods, lost at that time and later referred to the Court of Appeals, has again been lost. The referee pointed out plainly that the defendant had not been shut out of the market and questioned the right to enjoy a preferential market—such as non-poolers in general assume. The referee, Judge Merwin, stated that this typical non-pooler, who was defended by the most active legal authorities that have long allied themselves with the non-pool cause, "has the right to do, but is not willing to share in the burden which the cooperative association assumes in order to assist in keeping up this market. Everybody cannot sell in the New York market and somebody must take the burden of the low price surplus." He pointed out that if there were no organized cooperatives to care for sellers' interests then these individual interests would become a part of a general competitive scramble for the best market and that market would be depressed to a point not far above the market for manufactured milk.

Increase in Milk Freight Rates

New York State milk producers will forfeit about $30,000 a year because of the increase in milk freight rates granted to the New England carriers by the Interstate Commerce Commission. The New England railroads had proposed a 20 per cent raise in rates. The New England producers were joined by the Dairymen's League Cooperative Association of this state as such an increase would throw rates out of line in New York State. This opposition last year so effectually met the cost study presented by the railroads as a basis for the increase that this was practically abandoned by the carriers as the basis for their claim—M. G. F.

FARMER JACK AND THE THREE-HEADED GIANT

The corn king of the world in 1926, (by proclamation of Governor Donahey of Ohio) Ira C. Marshall of Dola, Ohio, grew 168.66 bushels of corn per acre. His son, Glen Marshall, youngest member of the 100 bushel club in Ohio, produced 159.3 bushels per acre, the second highest world's record.

Mr. Marshall writes, *"I am using Nitrate of Soda for my 1927 corn crop.*

"Some corn growers have marvelled at my yields.

"I do not want to take full credit for making this outstanding record, or pose as being a super-farmer of any kind but I do want to give a good share of credit where credit is due.

"Nitrate of Soda is in a very large way responsible for this remarkable yield.

"The Nitrate of Soda was mixed with acid phosphate and potash to make a complete fertilizer. Seventy-five pounds per acre of Nitrate of Soda was applied when the corn was planted and seventy-five pounds applied in the hill when the corn was approximately four inches high."

Mr. Marshall's record was checked by the Soils and Crops Department of Ohio State University.

Chilean Nitrate of Soda is quick acting. It goes to work at once. It is the standard nitrogen, furnishing crops with this necessary plant food in the form which they can use without delay.

CHILEAN NITRATE OF SODA · for Profitable Crops · THE STANDARD NITROGEN

Tests in Ohio, Indiana and Pennsylvania have shown an increased yield of wheat of about 35% where 100 pounds of Nitrate of Soda was applied to the crop. Let us send you our pamphlet, "How to Use Nitrate of Soda," and others. Just *cut out* this advertisement, write your name and address in the white margin and mail to our nearest office. 23117

NESHAMINY GARDENS

WHERE AN EDITOR WORKS AND THINKS

BY R. P. KESTER

THE freeze which occurred two mornings in April was too much for sweet cherries, pears and many of the peach blossoms. Very few cherries survived and almost no Kieffer pears. That is the first time in thirteen years that a late frost has done any serious damage in our community.

◆ ◆ ◆

SELDOM have I seen chicks start off better than have the 500 White Leghorns put in the brooder house two weeks ago. The losses to date are almost negligible and the chicks are growing rapidly. They are fed a mash containing the following: Corn meal, hominy feed, ground hulled oats, ground wheat, alfalfa meal, wheat bran, wheat middlings, bone meal and powdered buttermilk. There is also a little salt, ground limestone and protozyme in it. The percentage of the different grains is not given in the analyses, but the chicks are doing so well that we are satisfied to leave the knowledge of the proportions in the minds of the manufacturers.

◆ ◆ ◆

OF COURSE, ready-made feeds cost more than home-mixed rations, if one just figures the materials at wholesale prices, but unless you are buying in sufficient quantities to get wholesale prices, and unless you have a mixing machine, we figure that it is cheaper to buy the ready-mixed feeds,—especially for flocks of 500 and less. Our brood has eaten 200 pounds of the mash in two weeks, beside about 50 pounds of scratch feed. But we are glad that they have voracious appetites. We are hoping that May first chicks will be ready for laying before winter.

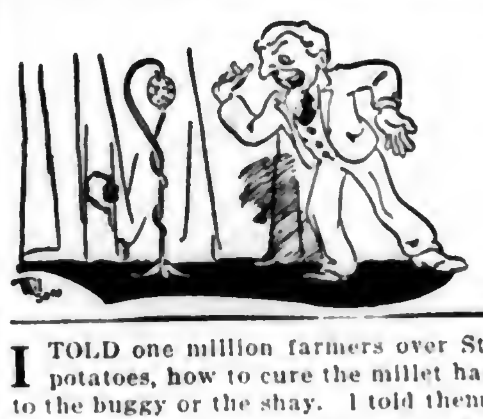
◆ ◆ ◆

"WE HAVE a good farm and a good home, but our children are not satisfied with what we make on the farm and want to get into something else," writes an intelligent mother and a country lover. "How can we make them satisfied?" she asks.

It is doubtful whether she can do anything to make them satisfied if she and her husband have been the kind of parents I believe they are. The glamour of distant things has always been attractive to young people, and is especially so in the present age. We have been passing thru a period of unusual prosperity in the business world. Big wages have enabled people to supply themselves with luxuries and entertainments as never before. Short hours and holidays give opportunity to enjoy these things. The farm boys and girls see this condition and want the same things for themselves. But they don't see all of it, nor do they see far into the future,—nothing but the superficial attractiveness of a money-spending, fun-loving generation.

◆ ◆ ◆

ONE of the world's most noted women said the other day, when asked on her ninety-fourth birthday what was the most interesting thing she had learned in her lifetime, that the fact that every generation had to learn its own lessons was the most notable thing she had discovered. Her observation seems to be correct. There are many things which young people will not believe until they have proven them for themselves. The fact that farming and a home in the country are better than most other things is one of them. I speak from the personal experience of my own life, as well as from an acquaintance with many others. I well remember the thoughts and ambitions of my boyhood days when I believed that anything was better than the life of a farmer. Well, I have done other things successfully, but age and experience taught me long ago that most of the things I believed as a boy were not so; that many of the worth while things of life are not to be had any place except in the country.



The Cheerful Plowman

The Radio Talk

I TOLD one million farmers over Station MEA how to cut their seed potatoes, how to cure the millet hay, how to hitch old Dobbin quickly to the buggy or the shay. I told them how to battle with the spreading, noxious weed, I told them how to gather in the choicest ears for seed, I told them how to portion out the bossies' daily feed!

I told these million farmers how to shine a rusty plow, I told them how to doctor up a colic-ridden cow, I told them how to build a barn with large and roomy mow! I told those million farmers how to handle their accounts, how to keep their coin from leaving with a scamper and a bounce, how to corner it and keep it in good reasonable amounts! I told them how to purchase all provisions at the store, I told them how to plumb a plank, a board, or two-by-four, I told them how to sharpen up the sickle of a mower!

I told them how to build a shed and build a chicken-coop, I told them how to wield a fork and how to wield a scoop, I told them how a bachelor can make a bowl of soup! I told those million farmers how to lubricate a car; I told them they should hitch their cart and wagon to a star! I told them they should love their wives and love their neighbors, too, I told them not to quit a task until their work was thru, I told them what an honest man should always aim to do!

If conditions are not straightened in this area, I'll say, if farmers in the future can not make their business pay, if they can not now be happy in their lives from day to day, no one can say with honor that the error is with me, for I gave enough instruction and advice, and gave it free, to last those million farmers thru a long eternity!—J. E. Tufft.

Friendly Talks

By EDGAR L. VINCENT

THE spring crops were all in. You know what a sense of peace it brings a farmer when he can think, "I have put in my last seed for this season, unless it be in the garden after a while for late vegetables. I will just sit on the fence and watch and wait and rest a bit."

Sitting thus on the line fence, an old neighbor spies me; and as his work, too, is well in hand, he makes his way over, and as he and I have done many a day, we talk about the crops, the neighborhood and things in general.

We have not talked long before a seriousness comes over the face of my good old neighbor. I see it and stop talking and wait. It is a good thing sometimes just to wait.

Where Is It Leading?

"I'm worried about Sam's boy, Jim. You know, he's got an auto now, and he's driving it pretty hard, pretty hard! I wish it wasn't quite so easy for young chaps and other folks to get autos. They says Sam's boy didn't have more than fifty dollars to pay down on that car; but they let him have it—installment plan, you know; and I don't like it. Jim is away now half the night, the Lord only knows where, and nobody knows what he is doing while he is gone. Can't you see the change in his face? And it shows plainer in his ways than in his face. Good, honest boy, Jim was. I hate to see him go this way. It is not so much the auto as what the auto leads to."

"I don't know what you and I can do about it, Uncle Ben." I say it in a helpless sort of a way.

"That's it. It don't seem to be anybody's business. And so our young folks are going to the devil."

"Well, I hope not as bad as that, Uncle Ben."

"Well, it sure is not making our boys any more manly or our girls any more womanly. You can see it. You know what is going on around us, just as well as I do." And I know Uncle Ben has me in a corner.

We Must Work for Tomorrow

"And I tell you it has got to be somebody's business, and that pretty soon, too, or first we know we won't have any more good, clean, honest boys and girls. They will all be broken down and spoiled before they are grown men and women. Look at their faces! Jim's hands are all of a tremble now. You can't live that kind of a life and not have your nerves all unstrung and your brain weakened. It is not today I am thinking about so much. I dread what will come tomorrow."

"Maybe you and I won't be here to see what tomorrow brings, Uncle Ben." I know that is a coward's way of looking at it, and I am not surprised that Uncle Ben whirls on me.

"You ought to be ashamed to say a thing like that! Every man that has a bit of goodness in his heart must think of what lies in the future. What is more, he must work for the world of tomorrow, and he can't do it any other way than to work for the world of today. It is your business and it is my business, and it is business of every good man and good woman to take better care of our young folks! We are not good citizens if we do not!"

Uncle Ben climbed down his side of the fence and I slipped off mine and I went home wondering if I have not missed it that I have not cared more and worked harder for the best good of the boys and girls we love so well. I am afraid this is true of us all. God help us to do better from this day on!

Paramount Pictures

A Regular Date with Happiness!

"Hello, Theatre Manager's Office? Tell me please, when you are playing these Paramount Pictures . . ." and you make a date for every Paramount Picture you haven't seen—a regular date with happiness! There are more good pictures today than ever before but not all of them are good, so it's wise to know before you go. Everybody is lucky once in a while, but why take chances when a 'phone call fixes everything?

Don't take chances—spray with Pyrox—*it never fails*

BIG healthy plants; heavy, profitable yields. That is what Pyrox Spray has done for thousands, and what it will do for you.

Pyrox not only kills bugs, worms and insects, but controls fungous diseases and prevents blights that turn the leaves brown or black. It is an insecticide and a fungicide in one, quicker, better and at less cost. Produces truly amazing results.

More convenient to use too. Five minutes and you are ready to spray. And when Pyrox is sprayed on, it *sticks* — making frequent sprayings unnecessary.

Use Pyrox for potatoes, tomatoes, cucumbers and other vegetables; grapes, small fruit, roses, shrubs and flowers.

One pound jars; 5 and 10 pound cans; 25 and 50 pound drums; and barrels. Costs much less per pound in the larger containers. For sale everywhere.

Spraying with mixtures containing copper sulphate actually increases the yield

The commercial growers of vegetables, citrous and other fruits, cannot afford the risk of not spraying, because copper sulphate not only controls fungous diseases, but actually increases the yield regardless of the presence of fungus. Time and again the Experimental Stations have shown conclusively the difference in yield between sprayed and unsprayed plots of equal size.

Bare Spots Cut Yields—We Pick Stones

IT IS now about the last call to fill vacancies in the new strawberry patch. There are several reasons why it is important that this be done. Full yields are possible only with complete stands of plants. Vacant spaces in the row make just that much more land on which weeds must be kept down with the hoe.

The most expensive strawberry plantation I ever started was a rather late planted one in which there were entirely too many vacancies. It cost twice as much to keep this patch clean during the late summer months as it would if there had been sufficient berry plants for the foliage to cover the ground in the row. And with twice the expense the return from the crop was less than half what it could have been. Moreover a good stand makes for a thrifty, promising appearance that will increase our pride which in turn is likely to result in much better care than otherwise might be given.

We have been picking stones. It is always a question as to how far one is justified in going with this very expensive operation. Nature of the crops to be grown is often a determining factor. There are several other factors to be considered. Saving of excessive wear and tear on machinery is not to be overlooked.

Fewer Stones Aid Weed Fight.

From my own experience I have gained the impression that the expense of picking stones may frequently be more than covered thru savings in the weed fight. In the first place where many stones are present it is impossible to secure anything approaching perfect alignment in the row. Close cultivation is then impossible. There will be an unnecessarily wide strip in which weeds cannot be reached with the cultivator. In addition we all know what a job it is to hoe thru a lot of stones.

I am inclined to believe that many of us have not realized the full possibilities of using small mules or small horses in cultivating intensive crops. Wheel hoeing is solely hand labor and on the heavier soils is, indeed, laborious.

Today we have been cultivating beets not more than a half inch high with one of our mules, using a cultivator with knives which throw no soil on the plants. The rows are but 18 inches apart yet no difficulty was experienced in keeping the animal off the plants. Satisfactory results in a case of this kind depend first upon the land being put in a smooth, even condition before planting. In the second place, one must have a cultivator and attachments adapted to the work and adjustments must be correct.

In some makes of fine-tooth cultivators carrying about 11 teeth, the teeth may be sloped slightly backward which makes possible close work even with tiny plants. In another make, the teeth are reversible, one position giving shallow cultivation with little disturbance of the soil. Our best thought applied to this problem of reducing tillage cost with intensive crops may result in surprising economies.—G. S. W.

Cucumbers Damaged

Mr. Watts.—Will you please tell me what is the matter with my cucumbers and what to do for them? Two years ago the disease came first. The cucumbers when small get a spot on them from which comes a sticky fluid. There are sometimes few spots and sometimes many. The spot runs into the cucumber and as it grows older gets darker but does not seem to get larger. I put in about a quarter acre and sell several thousand for pickles but last year they were a total loss. I have been planting for years in the same truck patch but try not to put cucumbers in the same place I had them the year before. We have a pressure sprayer for spraying potatoes. Would it be of any use? Thank you for the helpful articles you write for Pennsylvania Farmer.—Mrs. J. H. S., Clearfield County, Pa.

From the description given in your letter it is impossible to determine the exact nature of the disease which has been attacking your cucumbers. Both Bacterial Wilt and Mosaic are spread largely by insects and are controlled chiefly thru fighting the insects that act as carriers.

Bacterial Wilt is characterized by rapid wilting of large sections of the plant. A cut stem usually will show a sticky fluid. Mosaic causes a stunted growth and mottled appearance of leaves and fruit. Liberal use of a good repellent for the striped beetle is suggested.

A mixture consisting of 1 pound of calcium arsenate and 20 pounds of gypsum or land plaster has been widely used. Another formula is 1 pound arsenate of lead, ½ pound Paris green and 15 pounds hydrated lime. A formula which I have found very satisfactory follows: 10 pounds hydrated lime, 9 pounds fine tobacco dust and 1 pound of 40 per cent nicotine sulphate solution.

Any of these combinations should be mixed dry and are spread thru a dusting machine or a shaker made by punching a number of holes with an eight penny nail in the bottom of a tin pail. Spray freely as soon as the seedlings begin to break ground and repeat after each rain or every three or four days in fair weather.

Anthracnose may also be present. This disease and mildew spread most rapidly in warm moist weather and are held in check by weekly spraying with Bordueax mixture.—G. S. W.

Every year more eastern farmers use this method of planting potatoes.

Delaware Continues Spray Service Plan

IN ACCORDANCE with the orchard spray service plan, which was inaugurated a year ago by the Agricultural Extension Department of the University of Delaware, in cooperation with the State Board of Agriculture, the fruit growers of the state will receive timely suggestions in regard to the spraying of their apple and peach trees for the control of plant diseases and insect pests at various intervals thruout the coming season.

These orchard spray notes are prepared by Dr. J. F. Adams, Plant Pathologist of the University of Delaware and the State Board of Agriculture, and are distributed thru the offices of the county agricultural agents. As the majority of the commercial orchard industry is located in Kent and Sussex Counties, this service is confined largely to these two lower counties.

The rapid development of the grape vineyards within the past few weeks, as a result of the several periods of warm weather, has caused the grape growers to give special attention to the early applications of the Bordeaux spray for the control of black rot, anthracnose, dead arm, bitter rot and other fungous diseases, which attack the crop in this area.

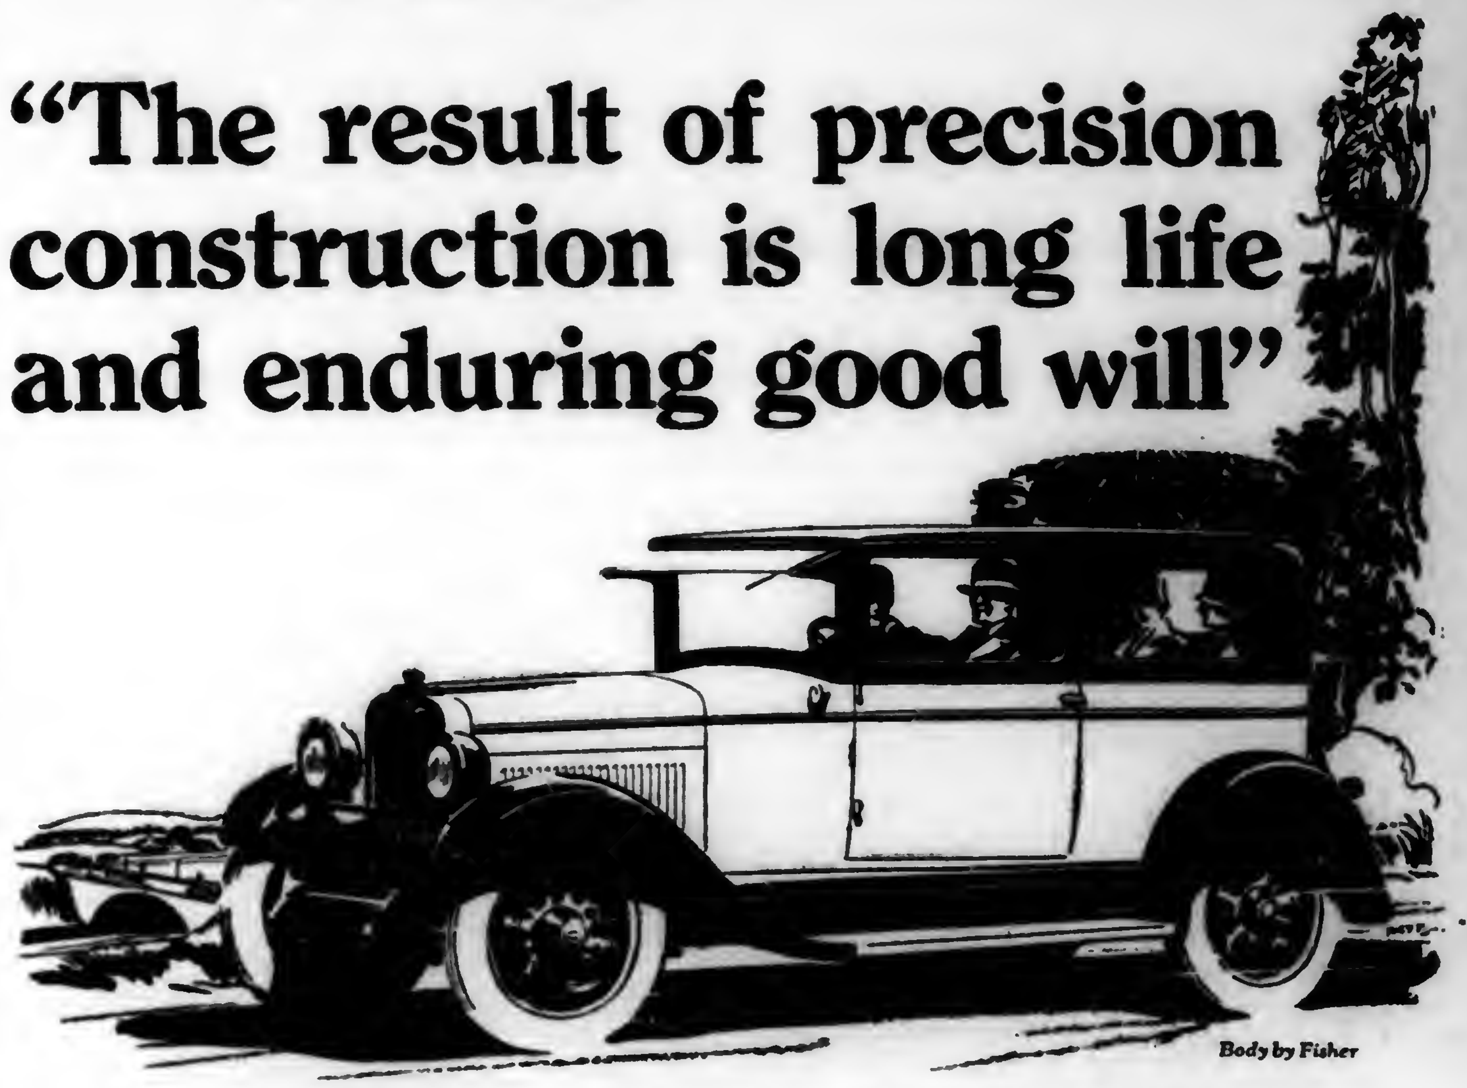
As a result of laboratory experiments and field observations, in addition to the disease control demonstrations which have been conducted in Kent County during the past five years under the direction of Dr. Thomas F. Manns, pathologist of the Delaware Experiment Station, in cooperation with County Agent Wilson, conclusive evidence has been obtained in regard to the importance of the early applications of Bordeaux mixture in the successful control of these various diseases in the vineyards.—W.

Yours for the Asking

IN SEASONS favorable to the development of brown rot and scab, thoro applications of the correct spray or dust, made at the right time, often mean the difference between a crop of clean peaches and no crop at all, says the U. S. D. A. Besides, sprayed or dusted fruit is less subject to brown rot after picking.

Farmers' Bulletin 1527-F, "Peach Brown Rot and Scab," gives directions for the application of sprays and dusts, together with formulas and methods of mixing. A copy of this new bulletin may be obtained free by writing to the United States Department of Agriculture, Washington, D. C.

"The result of precision construction is long life and enduring good will"



So much has been said and written about the standards of accuracy to which the Greater Oakland Six is built that "Oakland super-precision" has become almost an everyday phrase.

Owners, in discussing the car's flashing acceleration and buoyant smoothness . . . mechanics, when explaining the why of its infrequent repairs and adjustments—

—and even women, when exclaiming over Oakland's steadiness and steering ease—sooner or later use the words "super-precision," or others very similar. But we wonder, sometimes, if the users of that phrase really appreciate its profound significance. Do they know that in the manufacture of the the Oakland engine alone, eighteen operations are held to limits of five ten-thousandths of an inch? That *thirty-three additional* operations cannot vary more than three ten-thousandths of an inch? And that three ten-thousandths of an inch is one thirtieth the thickness of an average human hair?

Yet, after all, what if they do not know it? What if they do not even care that Oakland has invested millions for laboratories and equipment to make such accuracy possible for the first time in a car of Oakland's price?

All they are concerned with is results . . . the result of precision construction, which is long life and flawless operation . . . the result of rigidly controlled quality, which is lasting owners satisfaction . . . the result of enduring value, which is Oakland's enduring good will!

WHY MILK BY HAND?
Perfection cuts out drudgery and quickly pays for itself.

How The Perfection Pays For Itself

MANY satisfied users say that the Perfection saves the wages of one hired man. Others tell us it raises their milk production. Still others say that with no more labor they now keep larger and better paying herds.

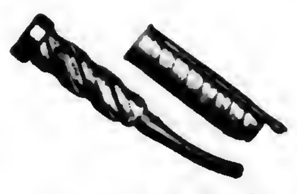
On one thing they are all agreed, that **Perfection pays for itself.**

The Perfection Milker not only does away with all the drudgery of hand milking but it saves from one-half to two-thirds of the time. Besides the saving in labor you get more milk. Cows yield freely to the uniform natural action of the Perfection Milker. The new two piece teat cup milks cleaner, faster and with less vacuum; besides it is easy to wash. By all this the Perfection quickly pays for itself. On a dairy farm it is a modern, money-making investment.

The Perfection Milker can be instantly regulated to meet every changing condition as lactation advances. It cuts the dry, unproductive period to a minimum.

Every year you more than pay for a Perfection Milker—first in wasted labor and wages, again in lost milk production. Why milk by hand?

Send today for your copy of free catalog. Perfection milking pays.



The new 2 piece Teat Cup. One pull and it is all apart for quick and easy cleaning.

DAIRY

A. A. BORLAND,
Staff Contributor and Adviser
Head of the Department of Dairy Husbandry
Pennsylvania State College

Culling, Breeding and Feeding Put This Herd in the Profit-Making Class

WHAT continued culling out of low producers, the use of good feeding methods and the keeping of superior sires will do in putting a man at the top in the dairy business is well illustrated by the herd of D. A. Morrow, of Blair County, Pennsylvania.

Mr. Morrow's herd of registered Guernseys has just completed the year in the Central Pennsylvania Guernsey Breeders' Association with an average production of 8647 pounds of milk and 426.7 pounds of butterfat. This is the third year the Central Pennsylvania Guernsey Breeders' Association has been conducting the cow testing association; 653 cows were tested by the association during the year. An increase of 698 pounds of milk and 23.5 pounds of butterfat has taken place in the average annual production per cow during the three years.

The value of product per cow during the last year amounted to $341.50. The cost of feed was $94.62, leaving a net return above feed cost of $246.88 per cow.

Mr. Morrow's herd was fed a grain ration consisting of corn and oats chop, wheat bran, middlings, cottonseed meal and linseed meal. Roughage consisted of alfalfa hay, corn stover and ensilage during the winter feeding season, and pasture in the summer, some grain being fed during the summer pasture season.

Mr. Morrow formerly kept a herd of grade Guernseys but thru the influence of County Agent R. Bruce Dunlap he purchased a son and a daughter of the noted bull, Langwater Royal, from M. T. Phillips, Chester County, Pa., in 1915. These two animals were used to develop a herd of purebreds. The sires since that time have been bought with the idea of increasing production and up to the present time Mr. Morrow's breeding plan has been very successful. He has also added to the purebred females from time to time by the purchase of purebred Guernsey calves.

He considers the cow testing association a real help in herd improvement as it eliminates all guess work from the production standpoint. It also eliminates the guess work as to the financial returns being made by each cow in the herd. Greater interest is created in the cows which in turn is conducive to higher dairy standards. Mr. Morrow was in cow testing association work five years before the organization of the present Central Pennsylvania Guernsey Breeders' Association.

This continued effort in herd improvement, including the weeding out of unprofitable cows, the gradual introduction of purebreds, the use of purebred sires and better feeding methods are doubtless responsible for the splendid showing made by Mr. Morrow in the Central Pennsylvania Guernsey Breeders' Association this past year.—A. A. B.

Warren C. T. A. Reports 14 Honor Roll Herds

Editors' Note.—This is one of a series of annual reports of Pennsylvania cow testing associations. As each association completes its fiscal year a summary of its records is published in this department. The owners of herds with a 300 pound butterfat average, whose names appear at the end of the report, will be awarded prize ribbons by the Pennsylvania Dairymen's Association at the 1928 State Farm Products Show.

THE Warren County, Pa., Cow Testing Association finished its fourth year March 1, 1927, with 18 whole-year members. There were 653 cows in the association during all or part of the year. The following averages were made in each of the last four years:

Year	Avge. no. cows	Lbs. milk	Lbs. butterfat
1924	496.49	7636	281.5
1925	382.49	7064	274.6
1926	284.67	5928	240.5
1927	474.93	8207	314.0

The results for the members during the year just closed are as follows:

Total average number of cows in the association	474.93
Avge. per cow: lbs. of milk	8207.
Pounds of butterfat	314.0
Percentage of butterfat	3.8
Value of product	$236.28
Cost of pasture	6.52
Cost of roughage	45.73
Cost of grain	50.20
Total cost of feed	102.45
Value of product above feed cost	133.83
Returns for $1 expended for feed	2.31

Five cows in the Warren County Association produced more than 500 pounds of butterfat; 38 produced between 400 and 500 pounds and 171 between 300 and 400 pounds, making a total of 214 cows with records for the year exceeding 300 pounds of butterfat.

Cow tester in charge, Andrew Ehrensberger; County Agent, H. N. Peist.

Fourteen herds with an average of five or more cows exceeded an average production of 300 pounds of butterfat. A complete list of these herds follows:

Owner	Avge. no. cows	Breed	Lbs. milk	Lbs. butterfat
Warren State Hosp., North Warren	73.33	R & G H	11,599	396.9

The Governor Clears Up His Desk

(Continued from page 3)

any subject relating to marketing and provides for failure to supply such information when requested. It also authorizes the publication of the results of such investigations with the approval of the Secretary of Agriculture. Thus, it will be possible to make public the findings of investigations following complaint against commission merchants when the facts justify this procedure in order to protect shippers.

Certain amendments were made to the Pennsylvania dog law, designed to give greater protection to farm property, livestock and human lives. These amendments, however, do not become effective until January 15, 1928.

The county fairs secured their full consideration when funds were appropriated to pay the usual state aid not only for the next two years, but the past two years as well.

New Curfew Law Approved

Farmers, especially near the larger cities, will be annoyed less by all-night roadhouse and dance hall parties after June 1 when the new 1:00 A. M. curfew law becomes effective. This law requires all roadhouses and dance halls in rural districts to secure a $10 license each year, and stipulates that dancing must stop at midnight on Saturday night and at 1:00 A. M. on other nights. The State Police will keep watch for violators of this law.

A real step toward uniform traffic regulations was taken in the passage of the motor code bill. This law increases the speed limit on highways to 35 miles per hour and in towns and cities to 20 miles per hour. Provision is also made for uniform traffic control and operation of signal lights. Obscene or vulgar signs or markings on automobiles are prohibited.

Hunting and Fishing Fees Increased

The amount of state aid for the construction of county and township roads has been fixed at $8,000,000 of which $5,000,000 will match county appropriations for construction of county roads, and $3,000,000 will be used for township roads.

Increase in both the hunters' and fishermen's license fee has been approved. The hunter's fee is increased from $1.25 to $2.00, effective this fall—the increase in revenue to be used for buying public hunting grounds and game refuges. The fishing license fee is boosted to $1.50, effective January 1, 1928, this revenue to go for propagating fish, purchase of hatchery sites, etc.

The deer damage bill failed to pass but was not defeated. It was retained in committee and will be given more complete consideration at the next session. When enacted, this measure will give farmers fair compensation for losses caused by deer

Gained 427 Pounds Each

A STUDY of the feed records turned in by 209 Baby Beef Club members who took part in the Harrisburg Show and Sale in January reveals these facts. The average steer weighed 571.6 pounds at the start, gained 427 pounds and when sold weighed 998.6 pounds. Each club member paid an average of $47.31 for his steer and fed him $45.88 worth of feed. The average steer dressed out 60.8 per cent and the average labor returns per club member was $22.74. Over one-half million pounds of feed was consumed and the average feed consumption per steer was 2720 pounds.—Pennsylvania Club News.

To you—experienced smokers . . .

EXPERIENCED smokers, your patronage has put Camel first among cigarettes.

You know good tobaccos. From their taste and fragrance, you know that Camels are rolled of the choicest Turkish and Domestic tobaccos grown.

Your preference proves it. You've paid every price and tried every brand, and you will smoke only Camels. Camel popularity—your vote—shows that Camel is totally unlike any other cigarette that ever was made.

You are also steady smokers, and you have paid Camel the highest compliment: "No matter how liberally we smoke them, Camels never tire the taste. They never leave a cigaretty after-taste."

Experienced smokers, it is your patronage that enables us to produce the best. We spare no expense, we buy the best of everything for Camels because we dare look forward to your appreciation. And you give it beyond all bounds!

There's only one thing more we could ask. Pass the good news to inexperienced smokers. Help them shorten the search for tobacco enjoyment. Extend them the most friendly—because the most helpful—smoke invitation ever spoken—

"Have a Camel!"

Is Your Oil Stove Ready for a Busy Summer?

IF YOU are not one of the many who now cook with oil stoves in the winter as well as in the summer, now is the time to put your stove in good operating condition,—unless you decide to get a new and more attractive model.

It is especially important that the burner parts be thoroly cleaned. Careful brushing with a stiff fiber or wire brush will do much to improve both the appearance and the operation of the burners, but boiled-over foods are likely to have left gummy deposits which require more thoro attention. Burners in this condition should be boiled. Never, however, use lye for this purpose as it is likely to affect the metal and if not actually damaging, at least it renders it subject to later trouble from rust. Boil in a strong solution of washing soda. This will remove all foreign matter and will not harm the parts.

Clean Parts Function Properly

All perforations in burner drums or chimneys or, in fact, in any part of the burner should be brushed carefully so that none of them is obstructed. All holes of this kind are placed there for a special purpose and it is important that they be kept in condition to function correctly in supplying the proper ventilation and draft for the complete combustion of the kerosene. Interruption of the process of combustion is sure to result in a certain amount of smoke and soot. Properly operated, the modern oil stove, if it has a combustion drum or chimney of sufficient length or size to provide just the right draft and space will effect complete combustion and prevent smoke, soot and odor.

Be sure to drain out any oil that may have been left standing in the feed pipe or burners of the stove and throw it away. Kerosene evaporates slowly, but what remains after standing several months is likely to be residue which, if allowed to become mixed with the fresh fuel, may interfere with proper operation. In fact, the feed pipe of an oil stove should be drained every three months to keep out any sediment that may gather in the pipe or oil basin. A long flexible wire will dislodge the sediment from the feed pipe. The feed pipe then should be rinsed with clean kerosene and all of the dirty oil should be thrown away.

If your stove is of the long chimney type which has a door equipped with mica (isinglass) be sure there are no holes in the tiny windows as this would affect the draft and interfere with complete combustion. One or two small pieces of mica obtained at any hardware store may save a good deal of trouble.

A little attention now may save annoyance later.

Flowers March Thru Our Garden

SURROUNDING a picturesque magnolia tree in gorgeous bloom are the bluest of "Bluettes" that have gladdened our hearts ever since March 6th. Among them you will see many varieties of the crocus and they hold their heads high above the background the little "Bluettes" provide. Tulips galore and many narcissi will play ring around the magnolia tree. Then will follow peonies and more peonies. These were seedlings and bloomed last year.

After the peonies come lilies in variety to keep us happy all the summer. You will find also the old star flower, and approaching the path I have pansies. We had 400 flower stems of lavender iris last year, with 13 other varieties to keep them company. We plant many flowers. They are joy-givers, and we sell countless bouquets at Easter and Decoration Day for church and other benefits.—Mary Stewart Shuman, Pa.

Note:—Mrs. Shuman has 54 varieties of peonies. That thrills my very soul. Think of growing this queen of flowers from seed, and having them bloom the first year. If you care to try seed from such a reliable source, send me a stamped envelope, self-addressed, and I'll write you where to buy.—Home Page Editor, Pennsylvania Farmer, Philadelphia.

Does This Habit Mar the Attractiveness of Your Home?

IF YOU have an unsightly rubbish heap on your farm I hope you are ashamed of it. Of all the unnecessary things on the farm the general dump is the worst.

I know of an otherwise attractive home that has a lovely lawn and well-cared-for shrubbery and flowers but beyond that lawn is one continuous rubbish pile.

Wherever one looks are old tin cans, auto tires, broken boxes, old shoes, an old spring wagon and even cast-off clothing. Just beyond the garden fence is a pile where all the kitchen refuse is dumped and in summer that heap of decomposing vegetable matter is simply rank. Is it any wonder that the owner complains about flies more than any other woman I know?

Rubbish Can Be Disposed of Easily

This case is an extreme one, but we do have the dumping habit more or less and this habit can be overcome. We farmers have no garbage collector and we don't need one. The pigs eat whatever they get. The chickens relish potato parings and nearly all greens. What can't be disposed of this way can be burned. A small nail keg for tin cans and broken crockery can be kept in some convenient place and can be emptied when full. Auto tires, old iron and similar articles can be sold. So why have the place looking like a regular dump?

Often we do have odd corners which don't seem to be worth much. They can be planted to something worth while.

When I moved to my present location it was all dump and house. I cleaned and cleared until I had a large lawn and a garden and every foot has been put to work. The worst place was behind the garage but this I finally got cleared and planted it to raspberries which have been a constant source of pleasure ever since. Strawberries also could have been planted here to advantage.

Odd Corners Turned to Profit

Horseradish is a good thing to plant in some out of the way corner as it matures rapidly. Simply plant the small roots and in a year you will have a large root. It thrives in damp, rich soil such as is found in a meadow.

All children like to have a garden of their own. Why not give them some neglected corner and let them plant as they please? Allow them to have the money from the sale of their vegetables and see how much more interest they take in it. Where is the child who does not like to earn his own pin money?

Nut and cherry trees are easy to grow along fences. English walnuts, pecans and shellbarks do well in a low, deep soil. Cherries and black walnuts prefer a higher and drier location. Fruit and nut trees do take a long time to bear but I feel that the waiting is well repaid.—Margie O. Wagner, Pa.

The crowning feature in my personal fly campaign to date has been screening in the kitchen porch. This did not cost much, and I did nearly all the work myself.—Mrs. A. Ward, Pa.

WILL YOU BE THERE?

New Jersey's Field Day Holds Interest for the Women, Too

NEW JERSEY folks with an "eye for business" like to have a day's outing at the State College of Agriculture Farm to attend the Field Day Celebration on June 15th. This meeting is arranged for inspiration and help for farm folk. If you ever have attended, you need no urging—if you never have gone, don't miss it this year. Fill your car and start early in the morning for there is much to see. Or, if you have no motor, do as I do—A little bus ride, then a train ride, then the trolley or a taxi. Even tho the trip may be tiresome, the meeting is well worth the effort and what fun it is to brush elbows with a group of folks full of enthusiasm akin to your own.

Many seem to think this a man's meeting. Let me enlighten you. The alert women ride right along with their husbands, fathers and brothers, for the home departments have so much to offer you. Food, Clothing and Home are given great consideration by the state specialists in charge of extension work.

Let's Get Acquainted

Lunch is sold on the grounds, and I am wondering how many of our page readers would like to picnic together during the lunch hour. It would be such a fine opportunity of seeing each other, and discussing the interests we all love. Mrs. Bell has arranged that we may carry our plates and coffee over to Room 31 of the Poultry Building where we may get acquainted a little better. We invite all who enjoy PENNSYLVANIA FARMER and all their interested friends to join with us in this reception to each other. How nice it would be if many women of neighboring states could come, too. Keep in mind the date, and arrange to be there.

We have a neat little badge we would like to send you to wear on that day, so that no one is lost in the crowd. Send a stamped self-addressed envelope and tell me how many badges you would like for you, your daughters, and friends.—Gertrude S. Stewart.

The Last Call!

$10.00 for the best—$5.00 for the second—$1.00 for each other Sunny Monday Contest letter we publish. Such are the rewards in the contest now going on, but soon to close. June 1 is the final day.

Send your wash-day secrets written on but one side of the paper, using not more than three hundred words. Write the names of helpful conveniences you use on a seperate sheet of paper. Do not forget to put your full name and address on upper left hand corner of your letter. Mail these secrets to

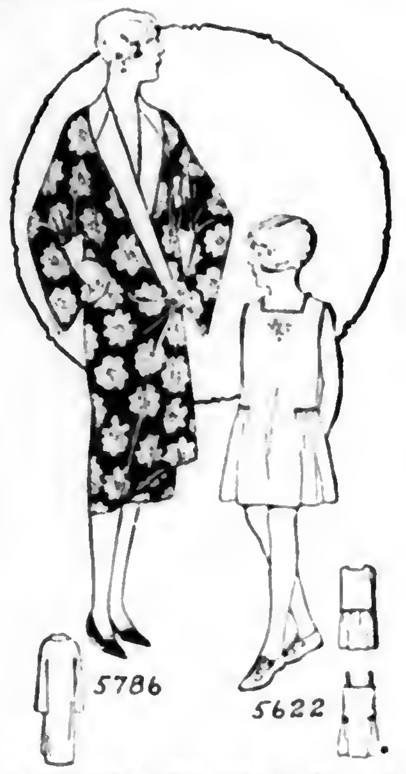
Styles That Stress the Practical

AN ATTRACTIVE NEGLIGEE

5786.—Four sizes: small, 34-36; medium, 38-40; large, 42-44; extra large, 46-48 inches bust measure. A medium size will require 3½ yards of 40-inch material together with ⅜ yard of contrasting material. Pattern, 10 cents.

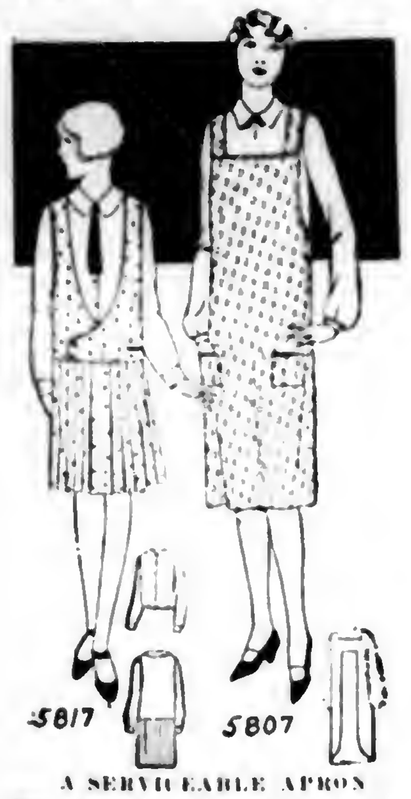


A SLIP FOR THE GROWING GIRL

5622.—Five sizes, 4, 6, 8, 10 and 12 years. A 10-year size will require 1¾ yard of 36-inch material if made with shaped shoulder, or 1½ yard if made with camisole top. Pattern, 10 cents.

SLEEVELESS SPORTS DRESS WITH GUIMPE

5817.—Four sizes: 8, 10, 12 and 14 years. A 10-year size will require 2½ yards of 32-inch material for the dress and 1½ yard for the guimpe. Pattern, 10 cents.



A SERVICEABLE APRON

5807.—Four sizes: Small, 34-36; medium, 38-40; large, 42-44; extra large, 46-48 inches bust measure. A medium size will require 2½ yards of 27-inch material. Pattern, 10 cents.

Send 10c in silver or stamps for our up-to-date spring and summer 1927 Book of Fashions.

Directions for Ordering.—Give figure or figures of each pattern exactly as printed at beginning of each description. Give bust measure when ordering waist patterns, waist measure for skirt, and age for children's patterns. Address Pennsylvania Farmer, 261 S. Third Street, Philadelphia, Pa.

LOAF CAKE

Yolks of three eggs
½ cup melted butter
½ cup sweet milk
1 cup sugar
2 teaspoons baking powder
2 cups flour
1 teaspoon flavoring

Cream butter and sugar. Beat into this the yolks of eggs, afterwards adding milk. Sift baking powder and flour three times, add slowly, beating constantly, add flavoring and beat three minutes. Bake in loaf pan in moderate oven.—Mrs. L. D. Kerns, Pa.

Clean heat

Color in Newest Perfections!

Gray porcelain enamel tops. Gray legs. Satin-black body finish. White enamel warming cabinets. Large white front ovens. —On newest Perfections, and *all* those with Superfex burners.

No black kettles to scour!

How much pleasanter cooking is when you know there won't be any black kettles to scour afterward! When you cook with the modern Perfection Oil Stove, kettle bottoms stay bright and shiny—just like new!

Perfection flames stay at the height you set them so you need never fear they will "creep up" and make the kitchen sooty. With Perfections, *all* the oil is changed into cooking heat. You have real fuel economy. See the newest Perfections at any dealer's. One to 5 burner sizes. Prices from $7.25 to $130.

PERFECTION STOVE COMPANY, *7609 Platt Ave., Cleveland, Ohio*

PERFECTION
Oil Stoves & Ovens

No smoke, soot, or odor with Perfection long chimney burners.

WARNING: Use only genuine Perfection wicks on Perfection Stoves. *They are stamped with red triangles.* Others will cause trouble.

EDWARDS saves you MONEY ON METAL ROOFS

We own our own sheet mills, roll our own sheets, make them into high-grade Reo Metal Shingles, Sidings, Ceilings, and Roofings of type and style for every kind of building. Also Ready-Made Garages and Farm Buildings. We control every operation from the raw material to the finished roof, and we sell direct from our factories to the user. Not a dollar to divide with anybody but the customer! You get better values for less money.

OUTLAST THREE ORDINARY ROOFS

Edwards Metal Roofs are weather-proof, lightning-proof and fire-proof. Thousands of home owners take advantage of our offer every year. Satisfied farmer friends are our best advertisement.

FREE SAMPLES & Roofing Book

OUR YOUNG PEOPLE'S FORUM.

Letters from Forum Members and Friends

Dear Cousin Ruth:—I am so glad you made me a member of the Forum page. I have lots of work to do. The next time I write I might tell you about our trip to Washington, D. C., this spring to see the cherry blossoms. Do you return pictures if someone sends one to you?—Miriam Mellinger, (X), York County, Pa.

We'd like to hear about your trip to Washington. Yes, I'll return pictures if they're marked on the back "Please Return."

COUSIN RUTH.

Dear Cousin Ruth and Forum Friends:—I like to read the letters that are printed. They are interesting. My school was out today. I received a present for having the most head marks in my spelling class. My teacher gave me a book. She also gave all the pupils a souvenir with her picture in it. Don't you think she was nice? I am very busy now helping to clean house.

I go to Sunday school almost every Sunday. Mother's Day will soon be here. Last year we children made a box and filled it with all kinds of flowers and gave it to mother on Mother's Day.

I am sending a picture of my two brothers.—Bertha Rupert, (X), Clinton County, Pa.

MY BROTHERS, FLOYD AND BYARD
Bertha Rupert, (X), Clinton County, Pa.

Dear Forum Friends and Readers:—I live on a farm of ninety-seven acres. I have no big brother so my older sister and I take turns to help daddy in the fields. Last Saturday it was my turn to help and so it fell to my lot to get on the potato planter and in the one day I planted 35 bushels of potatoes. We are raising eight acres of potatoes this year.

During the summer we truck and go to market at the summer resort of Mt. Gretna, no doubt you have heard of it already. There is also a military training camp there and during the summer it is packed with soldiers, then toward fall the cavalry comes. This is the most interesting of all. They are the soldiers with horses. After the cavalry is gone there is a camp meeting held out there to which crowds of people go.

Our school stopped on Tuesday and we had dinner. Each one brought something and the older pupils that had stopped came in, too. We enjoyed ourselves very much. Cakes, cookies, dates, pickles, crackers, pretzels and lemonade were served to all. The seventh and eighth grade girls were the waiters. I was the only eighth grade girl but there were three boys in my class.—Mary B. Dourte, (X), Lancaster County, Pa.

Dear Cousin Ruth:—I have seen many different kinds of birds. A bluebird is building its nest in an apple tree in our orchard. Most every day I go into the woods after mayflowers and arbutus.

We have moved on a larger farm. There are about 240 acres in it. We have a 15-acre pond on it where we can catch different kinds of fish.

I wish you could come and make me a visit this summer, Cousin Ruth. We would have lots of fun.—Inez Vanderpool, (X), Bradford County, Pa.

Dear Cousin Ruth:—I have a little baby sister and she is a very funny little girl. She can almost walk. When you lead her she walks very nice. Nearly every night when I come home from school I take her down to the school. The school is right on the corner and I live on the other side of it. The teacher likes her and I put her on the floor, before I turn around she is standing on it.—Josephine Toth, (X), Lackawanna County, Pa.

Dear Cousin Ruth:—I received your birthday card and I was very glad to get it.

It is raining real hard. The cherry trees are in blossom and it looks real pretty. I have a little baby brother. He is real sweet. He walks all over. He loves to go out and play around the yard. If you walk in the house and leave him on the porch he will go down off the stoop.

My school was out April 22nd. We had games in the afternoon but it stormed so we couldn't go outside and play them.—Patricia Dukeshire, (X), Wayne County, Pa.

You're another cousin who thinks Cousin Ruth and the Puzzle Editor are the same person. The Puzzle Editor sends a lot of her little friends cards on their birthdays and I think you must have received one from her. I'll let her know you got it.

COUSIN RUTH.

Dear Cousin Ruth:—I am sending you a picture of Loraine and Kenneth Sites and myself. We are having a good time. I think it would be nice to write a poem about "The Housewife." I like to write little ones.

We had 1165 peepies and we haven't lost very many yet. They are four weeks old. We have three calves. They are black and white. They are all about one size.—Hester Sowers, (X), Adams County, Pa.

PICNICKING IS FUN
Hester Sowers, (X), Adams County, Pa.

Dear Cousin Ruth and Forum Friends:—I am sending you a picture of my grandfather and the mules, Jerrie to the left and Harrie to the right. Harrie mule is 25 years old and Jerrie mule is dead. Saturday forenoon my grandfather and I were hauling stone all the forenoon until dinner time, and I thought it very much fun. Just as we were on the last load before dinner we had bad luck. Just as we were about up to the barn our mule gave a jerk and the runner came off the stone drag. The load was very heavy and when some of the stone fell off the mule was still pulling and it made it very light and the mule fell down. I was leading him and when he fell down he almost fell on top of me. Grandmother was standing in the doorway and I thought she would laugh her head off.

I have a new pet cat. Its name is Tabby. My dog is an Airedale pup. It isn't a year old yet. I got her in 1926 last 4th of July.—Elsie Woodington, (X), Bucks County, Pa.

GRANDFATHER DRIVING HIS MULES
Elsie Woodington, (X), Bucks Co., Pa.

Dear Cousin Ruth:—We had such good times at school we tore our dresses. Now our good times are over and we have to work hard. We don't live on a farm just now. The cherry blossoms are blooming and I guess they are with you, too. Our school ended April 22nd. I studied seven poems.—Leona Deysher, Berks County, Pa.

Dear Cousin Ruth and Forum Friends:—My school was over on April 11th. I had a very nice time the last day. I milk two cows every morning and evening. I also feed a little lamb which my father gave me when it was quite small. This spring I helped my father drop potatoes. I wish you could come up to my place this summer, Cousin Ruth.—Anna H. Rauck, Lancaster County, Pa.

Dear Cousin Ruth:—We have 300 little chicks. They are growing very fast. The last day of school we had a picnic. The boys brought their fishing rods along. We were at the Tulpehocken Creek but we didn't catch any fish. We are raising a calf.

We have two little woods in our land. In one we can find violets.—Clara Layser, nine (X), Lebanon County, Pa.

Dear Cousin Ruth:—On the 27th, 28th and 29th there was an exhibit at Asbury Park. All the schools in the county had big gray cards on which to put drawings and English and arithmetic papers. There were over 700 cards.

Our school publishes a paper and the pupils write the articles in it. It is very interesting.—Virginia McCulloch, Monmouth County, N. J.

If (X) appears after a name it means that that Forum Cousin has been made a member. If you have received a membership pin you may put the (X) after your name when writing.

After this no pins will be awarded cousins who fail to give their address, no matter how good the contribution. Watch out, all of you, name, age and address are very important.

OUR LITTLE FOLKS' PUZZLE CORNER

DEAR LITTLE FOLKS:—Here are four sentences which surely sound as tho something had gone wrong somewhere. But you can take the very same words that you find in these four foolish sentences and make four sensible sentences that I think you all will agree are quite true, but you may have to hunt around for those words which belong together. If any of Our Little Folks have never heard of the man named "Columbus," just ask some grown-up who he was, and you will have one sentence in almost no time at all. It might help all of you to start with that sentence and check off the words as you use them. When you have all the words arranged so that you have four true, correct sentences, let me have your answer on a postcard or in a letter by June 1th. BE SURE TO SAY HOW OLD YOU ARE, AND PLEASE TELL ME THE NAME OF YOUR COUNTY AND WHEN YOUR BIRTHDAY COMES. (You'd scarcely believe it but one of my little friends, who sent in a very good-looking answer, gave me everything about himself or herself except his or her name, so, of course, he or she need not expect to find it in the list of prize winners.) The prizes, you know, go to the ten children, sending in the correct answer, whose cards or letters are the best in grammar, spelling, punctuation, penmanship and general appearance. Address all puzzle answers to The Puzzle Editor, Pennsylvania Farmer, 261 South Third Street, Philadelphia, Pa.

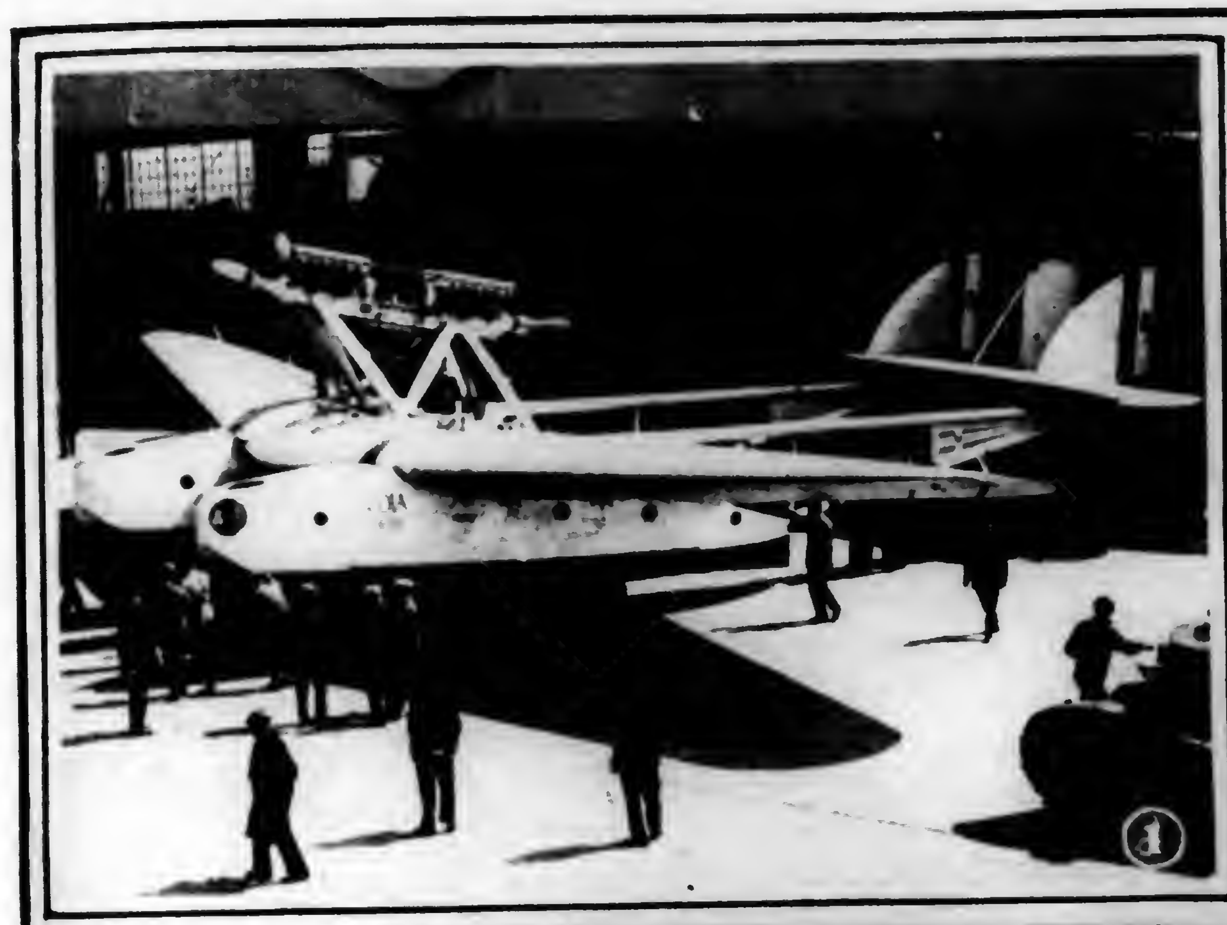
CAN THIS BE TRUE?

A ball is sweet.
Most play is Columbus.
A fuzzy America of lilacs discovered fruit.
Fragrance with the peach children like to skin.

The answer to the puzzle published May 7 is MOTHER'S DAY.

The prize winners are: Margaret Busch, age 9, Chatham, N. J.; Pierson Case, age 7, Ringoes, N. J.; Edna Colton, age 9, Elverson, Pa.; Mary Grove, age 9, Bellefonte, Pa.; Joseph J. Manbeck, age 13, Ringtown, Pa.; Maybelle Morris, age 10, Oxford, Pa.; L. Emma Musser, age 12, Middleburg, Pa.; Laura V. Stephens, age 12, Oxford, Pa.; Clarence Walling, age 12, Keyport, N. J.; Hilda Weaver, age 13, Windber, Pa.

PASSING EVENTS IN PICTURES



(Copyright by Underwood and Underwood)

1.—Commander Francesco de Pinedo, Italian flyer, inspecting his new monoplane, the Santa Maria II, at Miller Field, Staten Island, New York, before taking off for Boston. The plane was sent from Italy by Premier Mussolini to replace the one destroyed by fire at Roosevelt Dam, Arizona.

2.—When Princess Julianna, of Holland, celebrated her eighteenth birthday recently she automatically became Crown Princess of the Netherlands. She is the world's only unmarried crown princess.

3.—Mrs. Coolidge and three of the children of Secretary of Labor James J. Davis and Mrs. Davis had a fine time at circus on May 3rd.

4.—"Spotty," a little fox terrier owned by a Los Angeles man, equals any human acrobat. She stands on one forepaw on her master's forehead, then slowly descends. The pup can hold the position for three or four minutes.

5.—A picturesque view of the U. S. S. Memphis, United States Naval Cruiser stationed in European waters, in the harbor of Ville Franche, France.

The Captain of Troop A

By Katherine Mayo

COPYRIGHT 1918 BY KATHERINE MAYO

The detective who so quickly solved the baffling dynamite bomb mystery in the short story beginning on this page is now Major Lynn G. Adams, Superintendent of the Pennsylvania State Police.

"The Captain of Troop A" is the second of a series of true narratives about Pennsylvania's world-famous State Police.

THE Burgess leaned on his office table, chin in palm, scowling. With his free fingers he beat a devil's tattoo on the hard wood over which his waistcoat buttons should have presided. But the Burgess wore no waistcoat. His costume, in fact, was in the extreme sketchy, and his hair suggested the thought that the pillow, rather than the brush, had been its latest companion. The Burgess radiated an atmosphere of doubt, wrath, and extreme anxiety. It was five minutes to four o'clock in the morning.

By the table stood the Borough Chief of Police, large, serious, with an air of weight and importance. At his side waited one of his officers, a small man in the uniform of the Borough service. Over in a corner, among the shadows, sat one seemingly on the eve of old age, with a face like the face of an ancient hound,—long of line, drooping, full of a sort of hopeless yearning and of habitual sadness. He sat on the edge of his chair. His hands, between his knees, worked nervously at the brim of his hat, and his eyes never left the Burgess. His dress, neat and clean, had once been good; now it would soon be shabby. He was obviously under stress of strong excitement.

On the table lay four objects: A much crumpled newspaper; an electric flash-lamp; a red bandanna handkerchief; and a bomb, lying within a piece of common manila wrapping-paper.

The Burgess, the Chief, and the Constable stared at the four objects. The man in the corner stared at the Burgess. No one spoke. No one had spoken for some moments past. Nothing broke the silence but the steady beat of the devil's tattoo.

"D—— it all!" the Burgess broke out at last.

The Chief's eyebrows flickered up for the fraction of an instant, as instantly to resume their natural level. The Chief was a discreet man and one who could make allowances.

"You say,"—the Burgess spoke again,—"that nothing in this stuff here gives any clue?" he jerked his chin toward the objects on the table.

"Why, no, not quite that," the Chief rejoined. "I said that bomb, that flash-light, and that bandanna have nothing individual about them. But the newspaper is a little different. It's in Greek. Only, there are hundreds of Greeks around here—hundreds and hundreds of them. So I don't see how even the paper gives us much of a start."

The Burgess rubbed an impatient hand thru his already rampant forelock. "We can't fall down on this. It's too serious. It would reflect the worst way on our administration. Of course you hunted everywhere you could think of?"

"We made a complete search," the Chief stated for the fourth time within the hour, yet still with unruffled patience,—"a complete and thoro search of the entire neighborhood, before reporting to you, sir. And it gave no result whatever except what you see before you."

"D—— it all!" the Burgess once more permitted himself.

AGAIN silence settled on the room,—silence so deep as to make audible a clicking sound when the man in the shadowy corner parted his lips to moisten them.

It was the little Constable who spoke next.

"I suppose you gentlemen know," he ventured deprecatingly, "that Captain Adams is over in the city. Came up yesterday, on special duty."

"What!" his two superiors jerked out together.

"You don't mean Adams of the State Police?" the Burgess ejaculated, hope and the fear of hope too sanguine mingling in his voice.

"Not Lynn G., Captain of 'A' Troop?" the Chief was exclaiming in the same breath.

"Yes, sir— Yes, I do— Yes, it is— That's the man," the Constable did his best to answer.

"Burgess," said the Chief of Police impressively, "people that ought to know call Lynn Adams the best detective in the state. And if you ask him, and if he possibly can do it, he'll help us out."

"If I'll ask him!" the Burgess scoffed. "The only question is, Can he spare us the time for it? He's not in the city for nothing—he's got work on hand. Here—where can I call him?"

The Burgess was lunging after his desk telephone.

The little Constable named the place. "At least, I think that's likeliest," he added, carefully. "You know they do move pretty quick and unexpected—the State Police do—and when their business is finished they're off somewhere else on the tick. That's where he was, last evening."

BUT the Burgess was already talking over the wire. ". . . Mighty glad you're in the neighborhood. We're in trouble over here. Bomb affair. We can't make head or tail of it. I would appreciate it if you could spare time to come over and advise us. I'll have a car at your door in ten minutes. . . . All right. Good! Thank you, Captain!"

The Burgess, as he hung up the receiver, swung around with almost a smile on his face. "Says he'll come!" he reported.

"That's the talk!" the Chief rejoined.

Half an hour later the rush of an engine, the slam of a car door, and a springy foot on the steps proclaimed an arrival. The Burgess, himself going out to admit his visitor, in a moment returned escorting him.

The newcomer was a man about thirty-five years old, tall, soldierly in the true American type, and with that about him, in face and bearing, that would command men's attention anywhere.

"Have a seat, Captain," the Burgess was saying. "Gosh! but I'm pleased to see you. We've been worried to death, here,—the Chief and I, and it was like a godsend hearing you were in the vicinity. Now, Chief, you start in and tell the Captain all you know."

The Burgess flung himself back in his chair to listen at ease. The anxious frown on his face had changed to a look of keen and hopeful expectation. The little Constable beamed mildly triumphant. The man in the shadows rubbed his hands together with a dry rasping.

"Well," the Chief began, "it was this way: A little after midnight—say quarter to twenty-five minutes after—this gentleman over yonder in the corner—Oh! Meet Mr. Hill, Captain Adams. I don't believe the Burgess introduced you. Well, this Mr. Hill here, he came to my house and rang the door-bell and asked to see me. I ran right down, of course, and this is the report he gave:

"'HE'D BEEN kept at his store—he deals in plumbers' supplies, Mr. Hill does—he'd been kept at his store very late, figuring on accounts. And it was a little before midnight that he started to walk home. When he came to pass Mr. Burr's residence—A. C. Burr, you know, the big manufacturer—he happened to notice somebody sneaking along thru the bushes inside Mr. Burr's fence. He thought that didn't seem right so he just slid quietly in thru the gate to have a look. And in a minute, there in the shrubbery on the lawn, he came face to face with a man. The man had a bundle in his hand. And Mr. Hill thinks he was a Greek.

"'What are you doing here?' says Mr. Hill.

"'None of your d—— business,' says the man, and he drops his parcel on the ground and he pulls out his gun.

"But Mr. Hill, here, as the Greek threw up the gun, jumped and grappled with him. The man fired, and the bullet went straight thru Mr. Hill's hat. Then Mr. Hill grabbed the gun; only, in the tussle, he missed the barrel and caught the muzzle itself fair in the palm of his hand—and the Greek fired again—Mr. Hill showed me where the bullet went.—Yes, sir, it passed clean between the joints, drilling a hole between the bones and the leaders. Very lucky you were, too, Mr. Hill, to have done such a reckless thing and to have got off so easy. Mighty plucky of you—and A. C. surely ought to appreciate it. But at your age—really!

"Well, so with that Mr. Hill falls down—shock, you know. But in a minute or two he recovered himself, and when he looked around, he saw the Greek was gone away. Then, like a wise man, he comes as fast as he can straight over to me, and wakes me up and tells the story.

"So, of course, I hurried to A. C.'s at once, taking the Constable, here, along with me. By that time, very naturally Mr. Hill was pretty well done up, so I left him at Dr. Hill's, his cousin, next door to me, to get his hand fixed and to rest.

"Constable and I hunted all over Mr. Burr's premises and the entire surroundings. All we found is what you see before you on the table. That bomb was wrapped up in that newspaper. The other things were lying around close to it. They were on Mr. Burr's lawn, just near the house. No doubt at all, the Greek meant to wreck the house, and would have succeeded only for Mr. Hill's nick-of-time interference. Of course, after he'd fired his gun twice, and made noise enough to rouse the neighborhood, he didn't dare stay to finish his work!

"Now, Mr. Hill—that's straight, isn't it? Isn't that your experience?"

"Perfectly correct, Chief," answered the man in the corner. "Correct in every detail."

"Well, and then Constable and I went around to Dr. Hill's office again, and got Mr. Hill and brought him here to the Burgess. And I call it a pretty tough proposition, and a proposition without much handle to it," the Chief added emphatically.

"Mr. Burr," he went on, "employs hundreds of Greeks. And one is just as likely as another to have this pretty idea to bomb the house. As to the gun, they've all got 'em—brought 'em back when they returned after the Greek war. So you couldn't hope to identify him by that. The flash-light and the bandanna are just like thousands of others—and any Greek might have that piece of newspaper. I confess I don't see where to begin in the case. But A. C. and the public ain't going to see our difficulty. They'll be yelling for arrests."

DURING the Chief's recital the Captain had walked over to the table, and one by one, had examined the exhibits in the close rays of the lamp. The bomb, for a moment, seemed to interest him specially, as he revolved it under the bright light; then the flash-lamp and the newspaper.

At last he looked up with a smile.

"Do you think you can help us?" the Burgess asked anxiously. "Will you help us?"

"Perhaps I can. Anyway, I'll try," the Captain of Troop "A" replied.

"Have you got the time for it, tho?"

"Well, other work brought me to the city, but I think I can make the time that this will require."

The Chief and the Burgess breathed sighs of relief. The little Constable felt himself growing tall.

"But now," the Captain added, "suppose you let me have these things for the time being. I'll take them back to the city with me. And you all go get a little sleep. I'm sure Mr. Hill especially needs it. He must be pretty well worn out after such a night."

The man in the corner looked up gratefully.

"I do feel a little tired, I'll admit," said he.

"Is that hat the one that you had on when you went into Mr. Burr's garden?"

"The same one."

"May I see it?"

The man in the corner came forward to the table and offered his hat, a soft felt. But the Captain made no move to take it.

"Just hold it under the light," said he, "and show us where the bullet struck."

STOOPING under the lamp, his thin, carefully brushed hair shining above his tired old face, the hero of the night's adventure pointed out the holes that his would-be murderer's lead had drilled. Even the powder-smudge showed within, proving the closeness of the conflict. He seemed so frail a creature to have thrown himself into a desperate battle, alone, in the dark, and upon an occasion so easily avoided!

And yet there remained a look about him that explained it all—a look of the eternal child-heart, full of dreams and faiths and longings too slight of tissue to endure the bitter light of noon—full of generous impulse, of unreasoning courage, of hope beyond all mortal power to quench. This shabby, sad old man would be capable of an act of risk and romance to the very end of his days. Even now he was subtly suffused with a sort of exaltation, born of his bold defiance of facts, weakness and death.

An hour later, in his room in the city, the Captain of "A" Troop, skilful-fingered, was dissecting the bomb, while Sergeant Moore of his command watched the work with quiet appreciation.

"Six sticks of dynamite—a fuse—a detonating cap," the Captain enumerated, ranging the articles on the desk before him. "And a very amateur job it is—eh, Sergeant?"

Sergeant Moore gave his little trick cough. "Yes, sir—h'm-m—most amateurish!"

"Look how this fuse is cut! That was done by a person who never handled dynamite before. And here again—isn't it a wonder how these fellows over-step themselves!—here again is another clue. Look, Moore! Not a trade-mark on one of these six sticks. Now, you know almost all of the dynamite manufacturers put their brands on everything—the Duponts an ellipse, the Atlas Company an Atlas, and so on. But this chap was careful to get the stuff without a mark. And his very precaution simplifies our job. There is relatively so little anonymous dynamite.

"And, Moore, see this little stain on the shell of the thing. What is it?"

"H'm-m! Blood, sir—a drop of blood."

"Certainly. When I first saw it in the Burgess's office it was even clearer. Now let's have that bit of brown paper. Look in the corner, Sergeant. What do you see?"

"A little — h'm-m — problem in arithmetic, sir. Set down neatly with a very fine pencil. Evidently the deduction from some kind of change."

"Yes?" the Captain suggested.

"And the amount deducted would be about the price today of six sticks of dynamite, and this fuse, and—"

"And a few extra detonating caps?" the Captain offered.

"H'm-m! Quite so," agreed Sergeant Moore.

(To be concluded next week)

Did you ever hear this one?—

The Cue

Big Man in Audience (turning around)—Can't you see anything?

Little Man (pathetically)—Can't see a streak of stage.

Big Man (sarcastically)—Why then, I'll tell you what to do. You keep your eyes on me and laugh when I do.

Maybe They Read Directions

"Well, here you are," said the doctor, "a pill for the kidneys, a tablet for the indigestion, and another pill for the nerves."

"But, look here, doctor," said the patient, "how will the little beggar know where to go when they're inside?"

His Revenge

Deacon Flint—Jane, if I die, I wish you'd marry Deacon Smith.

Mrs. Deacon Flint—And why, Amos?

Deacon Flint—Well, the Deacon beat me on a horse trade once.

The Vacation Problem

"You give your clerks two weeks' vacation every year, don't you, Mr. Tintack?" asked a friend

"A month," grunted the hardware dealer.

"A month?"

"Yes. The two weeks when I go on my vacation and two weeks when they go on theirs."

Parson—You love to go to Sunday school, don't you, Robert?

Bobby—Yes, sir.

Parson—What do you expect to learn today?

Bobby—The date of the picnic.

Visitor—Jimmie, do you get good marks at school?

Jimmie—Yes, but I can't show 'em.

"Pop, I got in trouble today at school, and it's all your fault."

"How's that, son?"

"Remember when I asked you how much a million dollars is?"

"Yes, I remember."

"Well 'Helluva lot' isn't the right answer."—Automotive Advertising.

"I'm sorry," said the pitcher, "but if Biggins is going to umpire today I don't think I'd better pitch."

"Why not?" inquired the manager.

"Well," explained the pitcher, "last winter when I was down in Florida I sold him a lot."

JARVIS' White Leghorn Chicks and Barred Rock Chicks

From Vigorous, Healthy, High-Producing Stock. Tested and free from disease. Leghorns of the improved Barron English and Beall Tancred breeding. up the ladder

of UNADILLA satisfaction and safety

The Unadilla door fasteners make an ever-ready permanent and safe ladder from base to roof. The rounds, 15½ inches apart, stand out 5 inches from the doors and are 13 inches wide—as *easy* to climb, up or down, as your front stairs.

The Unadilla goes together easily—any handy man with a little help can erect it. It is exceptionally strong, lasting, and well constructed. It is air and water tight—frost-repelling and storm-defying. It is the most convenient, safe and workable silo we know how to build and we've spent a good many years on just this job.

Write today for our handsome, illustrated catalog showing why a Unadilla is the silo *you* need. It also shows Unadilla water tubs, storage tanks and vats.

If you want to take advantage of a special discount that is worth having—order early. Or, you can, if you wish, pay for your Unadilla on easy terms.

Things That Count Are Proven Facts

We have heard so much argument on this and that about feed that we wonder sometimes if the real important matter isn't apt to be overlooked.

There is honest argument and difference of opinion as to whether a feed should contain this or that amount of protein.

Whether the value of a feed should be stated in terms of "total digestible nutrients" or digestible protein and therms of heat and energy.

Whether the formula should be published on the bag or recognize the manufactured feed as a finished product just as paper is no longer wood-pulp or rags but a new article which must be judged as paper.

Whether you should buy separate ingredients and mix them yourself or buy a ready mixed feed.

These are all questions of interest and are splendid subjects to make conversation or argue about but when it gets down to the feeding of your own cows where your own profit or loss is at stake it seems to us that the question that really counts is how much the milk checks are more than the feed bills—not for any one month but month after month and year after year.

Not what argument would make it seem that it should do but what has actually been done and can be done again.

It is the test of the monthly feed bill compared with the monthly milk check that has proved the value of Tioga Dairy Feeds.

You can buy feeds for less money and you can buy poor cows very cheap and either one will lose you money. You know it pays to buy good cows, you pay the extra cost to make more profit. The same rule works with Tioga Dairy Feed fed with Tioga Mineral Food.

Ryde's Ryde's Ryde's Ryde's Ryde's Ryde's Ryde's Ryde's

THE HOUSE OF
Ryde & Co.

GUARANTEES entire satisfaction with every bag of feed bearing the name "RYDE." Exhaustive tests have proven that better ingredients or better combinations of materials *cannot be had at any price.* Therefore, insist that your dealer give you RYDE'S FEEDS. Be sure the name is on the bag. Don't accept a substitute. Years of fair dealing and guaranteed satisfaction are typified in the slogan

RYDE'S FOR RESULTS

Ryde's "Startrite" Chick Food

With Buttermilk, will raise every normal chick to maturity. It is a safe, natural food and contains every element necessary to rapid, uniform growth. Includes choicest GRANULAR grains, hulled oats, selected whole seeds *with natural oil retained*, fresh meat scraps and a liberal portion of dried buttermilk. Easy to feed. Economical; one lb. will raise a baby chick well past the danger period. *At your dealer's in 25, 50 and 100 lb. bags.*

For the growing chick nothing equals RYDE'S HAV-TO-GROW Chick Mash. With Buttermilk. Has minerals, fats and best growing feeds in abundance. Makes broilers or layers in double-quick time.

To make that hen "lay an egg a day" feed RYDE'S HAV-TO-LAY EGG MASH. *With Buttermilk.* Supplies egg making elements for maximum egg production in one convenient-to-feed, unequalled food. Contains choicest ingredients. Economical. At your dealer's in 25, 50 and 100 lb. bags.

Ryde's Cream Calf Meal

(with concentrated sweet skim milk)

is an economical milk substitute on which your calves will thrive and grow. ***Save the milk and earn two profits;*** one on milk and the other on the market value of the home grown animal. 100 lbs. RYDE'S CREAM CALF MEAL makes 100 gallons of rich, nutritious milk substitute. Choicest materials, not a "by product." Especially milled and steam cooked for easy digestion. At your dealer's in 25, 50 and 100 lb. bags, or write us.

Staff Contributor and Adviser
Glenview Farm

They May Be Starving

I have about 800 Leghorns three weeks old. Have lost about 20 per cent of 1000. My first trouble was a bad lot of toe pickers. Then could not get them to take scratch feed and they still will not eat it. They grow, are very nicely feathered, but now they seem to die of starvation. They simply have nothing in the crop.—E. S. H., Lehigh County, Pa.

In rearing my chicks this year I noticed that there were times when they seemed to prefer mash to grain and later the situation was reversed. However, they grew well, so evidently it did not matter.

Losses such as you mention sometimes result from chilling and crowding under the brooders at night, due to insufficient heat. The chicks droop around and refuse to eat. It also happens that chicks rapidly outgrow their mash hopper accommodations, which means that many of them do not get enough to eat and gradually starve to death.

Also, a disease known as coccidiosis occurs, in which the chicks droop, appear drowsy, refuse to eat, get very thin and die. This usually attacks older chicks, and I am of the opinion that one of the other causes is at the root of the matter.—R. L. S.-H.

It Cures Cannibalism

I have several chicks in my five-week-old flock that seem hearty but their eyes are pasted shut and seem hard to open even with my fingers. Some of them have started to pick others' tails until there are no feathers and scarcely any flesh left. I am feeding a good commercial mash containing dried buttermilk, cod liver oil, etc. I clean the coop every two or three days and put in clean litter. —K., Bedford County, Pa.

There are three things that might cause your chicks' eyelids to become pasted shut; nutritional roup caused by a deficient ration, ordinary roup, which occasionally attacks young chicks, and dusty litter, which causes an irritation of the eyes and leads to the gumming up you describe.

From your description of your method of handling your chicks, which seems very good, I do not think the first two can be to blame, unless you notice a bad odor from the affected chicks which would indicate true roup.

I have seen chicks with sore eyes that resulted from using such material as barn sweepings or hay chaff for litter, and if you are using any sort of dusty stuff no doubt it is to blame for the sore eyes.

I have had very good results in stopping all sorts of cannibalism in young chicks by feeding condensed buttermilk as it comes from the keg, simply smearing a quantity that they would eat in fifteen minutes on the wall of the house where they could pick it off. If chicks are without feed or water, if they are crowded, or if the house is too hot, it is liable to start them picking each other. Letting them out on good range is another preventive.—R. L. S.-H.

Prefers Pinch Method

I [illegible] to know how much sodium fluoride to use to a quantity of water [illegible] hens for lice. Is it advisable to use straw for litter for hens [illegible] the summer?—A. H., Bradford County, Pa.

I think you will like the pinch or dry method of applying sodium fluoride better than the wet method. Rub a pinch of the powder in the feathers of the vent, also several pinches in the body feathers and one around the neck. A pound will treat about 100 birds by this method.

I think it is a good plan to litter the hen-houses lightly during the summer. The hens can be fed outside in good weather and inside when it rains.—R. L. S.-H.

Mix Oil With Mash

I have decided to follow the chick feeding schedule outlined in the March 26 Pennsylvania Farmer, but am at a loss to know how to mix the cod liver oil with the dry mash. This ration calls for dried milk in some form. Would it be all right to feed dried skimmilk in the dry mash when sour skimmilk is fed as a drink? —H. C., Wyoming County, Pa.

You can incorporate the oil with the mash by first mixing it with part of the bran, using enough to take up the oil, and then mixing this bran with the balance of the mash. It is perfectly all right to feed milk powder in the mash and give some form of milk to drink in addition.—R. L. S.-H.

NEST BOX NOTES

FROM now on culls will appear in the laying flocks. These boarders should be removed as soon as seen and sold. We go over the flock about once a week and remove hens that show signs of not laying. Their sale thruout the summer helps to keep up the farm income as the egg production decreases.

* * *

Broody hens that are not wanted for setting purposes should be broken up so that they will start laying again. If this is not done, their time is lost; and beside that, they are constantly scrapping with other hens that want to get into the nest to lay, with the result that many eggs are broken or smeared. Even Leghorns sometimes want to set, so we make an inspection of the nests occasionally at night and remove the clucks to a crate with a slat bottom, in which they soon cool off and are ready to go back to the flock. Broody hens should be fed and watered while being broken up.

* * *

This spring has been somewhat trying on the young stock. We have had a great deal of cold and rainy weather with alternate warm days, and I find that the young birds seem to need heat longer than usual. It pays to keep fire in the stoves as the birds do better than if they feel chilly.

* * *

Sold the roosters yet? Ours went just as soon as we were thru saving hatching eggs.

* * *

Small chicks that have been chilled and have piled up on each other are hurt in other ways than by smothering. The survivors seem to suffer digestive disorders, refuse to eat, and many of them are liable to die.

* * *

Young birds that are several weeks old may be badly crowded in the brooder houses by now. Crowding results in uneven growth among other ills. Care must be taken that the birds have enough room. They should be taught to perch as soon as possible, which will help somewhat with the crowding business.—R. L. S.-H.

GRASS SEED—WHOLESALE PRICES

Toledo, Ohio, May 21, 1927.

Cloverseed, cash, imported, $14; October, $16.25; December, domestic, [illegible]; Timothyseed, cash, old, $2.50; new, [illegible]; May, $2.60.

FEED PRICES

The prices below are for prompt shipments based on payment on arrival of cars as quoted by the Philadelphia jobbing trade to retail feed dealers on Monday, May 23, 1927. Quotations cover solid carlots for delivery at Philadelphia or Scranton rate points.

Pure spring bran	$37.50@3
Spring bran	37.00@3
Soft winter wheat bran	38.20@3
Hard winter wheat bran	37.25@3
Standard middlings	37.70@3
Soft winter wheat middlings	38.70@4
Flour middlings	41.00@4
Red dog flour	47.0
White hominy	39.50@4
Yellow hominy	39.00@3
36 per cent cottonseed meal	39.75@4
41 per cent cottonseed meal	42.75@4
43 per cent cottonseed meal	44.50@4
34 per cent linseed meal	44.75@4

Heavy demand for both nearby and futures. Middlings scarce and in strong demand.

New Potato Market Uneven

Review of the Week Ending May 21

POTATOES—The Florida season is practically over and the eastern markets are now receiving most of their supplies from South Carolina. Shipments from this state have reached 300 cars daily but with a larger territory to serve than usual, the price has gained sharply. South Carolina stock sold at $6.00 to $6.50 per barrel in Philadelphia on Monday and advanced to $7.50@8.00 by Saturday. New stock showed a slightly weaker tendency at the close of the week but old potatoes were stronger and advanced to $5.50@5.75 per 150-pound sack.

ASPARAGUS—Cooler weather resulted in lighter supplies of New Jersey and Pennsylvania asparagus in Philadelphia and New York. The demand for green asparagus was active and prices as high as $7.50 per dozen bunches were reported. There was a great variety of sizes and quality and large amounts sold anywhere from $1.20 to $7.00. The acreage in New Jersey is estimated to be around 500 acres larger than last year.

FEED—The market was steady. Wheat feeds commanded premiums on some markets but were generally steady. Gluten feed offerings were light and prices higher. Hominy feed prices were higher in sympathy with the advance in the corn market. Cottonseed prices were firm and linseed meal steady.

HAY—Receipts of hay were rather light and the demand slow but prices held about steady. Timothy showed a stronger tone and timothy and clover mixtures were wanted.

GRAIN—The grain market was irregular with prices mostly averaging higher. Unfavorable conditions in the Corn Belt caused corn futures to reach a new high point. Wheat was higher but oats were barely steady.

BUTTER—The market during the week was unsettled due to heavier receipts and lack of confidence. Buyers felt that there was a possibility of prices declining still further and limited their purchases to immediate needs. Receipts were above those of last year but the quality of the butter showed considerable improvement.

EGGS—There was a fair demand for good quality eggs on the New York market and prices held fairly steady. There was a moderate demand for receipts of average quality.

POULTRY—The cool weather was favorable for the New York live poultry market and the demand was fairly active. Live fowl were firm but heavy stock was draggy. The larger sizes of broilers were wanted and this stock was scarce. Fresh killed broilers were in light supply and held steady in price. Fowls were liberal and weaker.

LIVESTOCK—Hog prices closed slightly higher than a week ago in Chicago. Beef steers were higher with yearlings irregular. Receipts of cows were light and the market reached the highest point of the season. Vealers declined and stockers and feeders were very scarce. All classes of sheep and lambs closed weaker.

County News and Comment

Adams County, Pa.—The past month has been unusually wet, so wet that probably not more than one-third of oats has been sown and very few acres of corn have been planted. Grass fields and wheat doing very well except in low places. The prospect for fruit is good. Stock are in pastures. Spring pigs doing well. Prices: wheat, $1.33; corn, 75c; oats, 50c; milk, 4 per cent, $2.10; eggs, 20c; spring chickens, 35c.—A. R., May 17.

Chautauqua County, N. Y.—Very few crops in except a few early potatoes. Many farmers just starting plowing. Most of the ground is pretty wet to work as yet. The sugar season proved to be rather long drawn-out but not especially good. Fruit bloom coming out very sparingly but perhaps this only indicates less surplus to go to waste than usual. Most of us have a little garden in and some tomatoes started for transplanting. Butter is about 50c per pound; eggs, 25c; potatoes, $1.50 bu.—E. M. A., May 12.

Clarion County, Pa.—Oats growing very slowly. Few early potatoes planted. Pastures slow, not many cattle on pasture yet. Larger hatch of young chicks this spring than usual. Fruit will be scarce in some sections. Wheat fields looking fine. Some improved road building being done. Dairy cows of good quality selling for $100 to $150. Spring pigs scarce and high in price. Potato acreage will be somewhat larger than last year. Prices: creamery butter, 61c; eggs, 22c; potatoes, $1.40; wheat, $1.15; oats, 50c; ear corn, 50c.—C. R., May 17.

Lackawanna County, Pa.—Farmers got a lot of plowing done during April. Roads were worked and farmers were generally busy putting repairs on buildings and fences, hauling lime and fertilizer and spraying. Pomono Grange met with Newton Grange on May 5th. John McSparran gave a splendid address and in the evening the Wyoming County degree team conferred the fifth degree on a large class. A heavy thunder shower with hail as large as hickory nuts cut a wide swath thru the county on May 10th, damaging green houses and breaking window panes in buildings. Eggs are low, 20@30c; new potatoes, $1 pk., old, $1.75@2; butter, 50@55c.—E. A. K., May 12.

Mifflin County, Pa.—Wheat, oats and grass are growing well. Some oats not sown yet, some corn planted. Weather too cool and wet. Some ground to be plowed. Not many potatoes planted, seed scarce, $2 per bushel. Fruit much hurt by the late frosts. Help scarce as the railroad is taking many men for track work, some work being done on public roads. Wheat, $1.25; corn, 90c; oats, 45c; butter, 50c; eggs, 23c; apples, 80c.—J. H. B., May 16.

Monroe County, Pa.—The week of 16th to 23rd will be the big week for planting corn. Oats all sown. Potatoes being planted. Rye is beginning to head. Seed corn scarce. The 33rd annual Sunday School Convention was held in Stroudsburg May 12 and 13th. The American Red Cross fund for Mississippi flood victims has been oversubscribed, $5100. Country butter, 40c; eggs, 28c; potatoes, $1.25; rye, $1; oats, 65c; corn, $1; wheat, $1.25; pork, 18c; veal, 13c.—G. E. S., May 14.

Potter County, Pa.—Pear and plum trees in full bloom. Strawberries commencing to blossom. Many webs of the tent caterpillars appearing in wild cherry and apple trees. The wet weather continues; many farmers waiting for soil to dry before sowing oats. In dry locations oats have a good start. Pastures poor. Poor hatches and weak chicks reported. Dairy business good. Butter in good demand. Pupils of county invited to visit state capital. Chamber of Commerce, Harrisburg, assisting pupils to plan trip. Health clinics held at several places. Prices: butter, 50c; eggs, 25c; veal calves, 10c; pigs, $3@6.—M. C. S., May 11.

Tioga County, N. Y.—Dr. E. P. Reed, of Syracuse, representing the State Department of Health, will hold a clinic for crippled children in Owego on May 24th. A demonstration of the new tractor road scraper was given at Owego last week. This machine does the work of many teams with only one man. Two hundred schoolteachers of this county met in conference in Owego on Friday. Interesting addresses were heard at the meetings of the Dairymen's League. Home Bureau is holding meetings in all parts of the county and 65 women representing 15 communities attended demonstrations in laundering last week. The work of placing fresh-air children in homes for their summer vacations has begun. A new $15,000 school building east of Apalachin is to be completed in June.—C. A. H., May 11.

Warren County, N. J.—We are having a lot of cold weather. Oats seem to be getting a good start but grain and grass are growing very slowly. Potatoes breaking thru very slowly. A little corn planted but a lot of sod still to be turned. Most of the pear, plum, peach and cherry sets are falling but apples seem to be sticking. Good dairy cows bring from $125 to $175 and milk is $3 per cwt. Feed prices remain about the same altho grains are up a little. Corn, $20 ton; wheat, $1.30; oats, 55c; eggs, 30c; butter, 47c.—A. S. P., May 20.

The Market Place

By W. R. WHITACRE

Pennsylvania Bureau of Markets

THERE are as many kinds of men in the produce business as you will find anywhere. There are the buyers who haggle over the price of a couple of baskets and others who buy a carload and are off, with the entire deal taking less than three minutes. I'll let you listen in on one kind of sale.

"Ah here comes my good friend Issy. What can I do for you this morning?"

"You can't do me again. Yesterday I lost money on those mushrooms; you said they were fancy. Fancy! Such—stuff I never saw. I tell you I lost money."

"Now now, Issy, don't stuff me. You know I have the best mushrooms on the street. Look now at these that just came in. How many do you want?"

Issy looks them over, picks out a couple of small ones and shakes his head in disgust.

"Such stuff and you call it fancy. I suppose you want $1.00 for them. They are worth but 50c and then I get stung."

Louie, the salesman, whispers in Issy's ear in great confidence. Issy continues to look disgusted and I cannot describe just how disgusted he looks. You have to see it for yourself.

"What! You robber, Louie. You stung me yesterday; today you want to rob me. I can't stay in business and lose money. I'll give you 60c or nothing. What you say? Make it snappy."

"Issy, such foolishness. They will make you plenty of money. Look now, everyone the same on top and bottom. Fresh, and the price is right. I will sell you twenty-five baskets at $1.00, then I am cheating the boss. Mike down the street is getting $1.25."

Issy walks off. "We can't do no business today. Your ideas is too high."

Issy visits several other stores handling mushrooms. Five minutes later.

"What, Issy, you back again, how many?"

"Knock off a dime Louie, and I will take fifty baskets.

"Issy, I positively can't do no better. I made you a bargain price because you are an old customer. If I knock off a dime the farmers will raise cain and the boss will fire me."

Issy walks out again.

Five minutes later.

"Well, Louie, you robber, tie up them fifty and give me a ticket."

Louie writes the ticket and gives Issy the tag.

"Good day, Issy."

"So-long, Louie."

Police Protection for Farm Homes

(Continued from page 3)

fires and outlining preventive measures was published. Copies may be obtained, while the supply lasts, from the Bureau of Fire Prevention, Pennsylvania State Police, Harrisburg, Pennsylvania. The bulletin is called "A Survey of Farm Fires."

This special investigation of farm fires was, of course, only a small part of the fire prevention work of the State Police. In one year recently 93 arrests were made for arson. In 1922 the per capita fire loss in the town of Bethlehem was $17.31. The next year, after some police detective work, the loss was $3.10 per capita.

The advance estimate cost of maintaining the Pennsylvania State Police for the two-year period ending May 31, 1927, was $1,662,000. Of this amount about eighty-eight per cent was used for field police work and the remainder on administration, fire prevention and criminal identification. This amount does not maintain the full legal force of more than 500 officers and men. For several years the legislature has failed to appropriate sufficient funds for a full force. The present skeleton organization contains about 300 men.

The State Police would be a self-supporting organization if the fines that are imposed directly as a result of its work were available for its own use. Instead, however, these fines are paid into the county, state and national treasuries and the force receives no compensation for the work it does for the national, county and city governments.

The history of the Pennsylvania State Police abounds in thrilling tales of amazing personal heroism, of uncanny skill in solving crime mysteries. Fortunately, a few of these hundreds of true stories have been put down on paper by Katherine Mayo and some of them are now appearing in Pennsylvania Farmer (see Page 16).

These stories and the hundreds of others that might be written prove that the officers of the Pennsylvania State Police never have forgotten the standard set up by the man who built the organization. Back in 1905 he said:

"It is possible for a man to be a gentleman as well as a policeman."

"In making an arrest you may use no force beyond the minimum necessary."

"When once you start after a man YOU MUST GET HIM."

Ride the new $7,000,000
Str. Greater Detroit
Str. Greater Buffalo
—the largest and most luxurious of their type in the world—and their sister ships, the swiftest that sail the Great Lakes.

Vacation at
MACKINAC ISLAND
"The Summer Wonderland"

Overnight from Chicago or Detroit via the fast D & C boats is this scenic wonderland. Here days are warm, and nights refreshingly cool. Here unspoiled natural scenery, virgin forests, historic points of interest will allure you. Golf, tennis, horseback riding, boating, fishing, and countless other recreations.

View the illuminated
NIAGARA FALLS
—now more interesting and beautiful than ever with the billion candle-power multi-colored lights playing on the falls every night

Utmost in Luxury Aboard

First class accommodations exclusively. All water sterilized. Autos carried. Radio and moving pictures on both the Buffalo and the Mackinac Divisions. On the Mackinac Division there is also dancing, with hostess in charge, afternoon teas, bridge, golf, horseshoe pitching, etc. Tickets on this Division limited to sleeping accommodations.

Educational—Interesting
Health Giving

Stay at any port as long as you like on one of the D & C trips. Visit Chicago, second largest city in America; Mackinac Island, the ideal summer resort. See the many historic points of interest, the virgin forests and inspiring scenery, a veritable paradise for the nature lover. Stop over at Detroit, the capital of the automobile industry, at Cleveland, Buffalo, and the world famous Niagara Falls. Enjoy your cruise in restful comfort, breathing the invigorating lake atmosphere that develops a raving appetite and insures sound refreshing slumber. Can you imagine a more delightful vacation trip?

DETROIT & CLEVELAND NAVIGATION COMPANY

Firestone Dealers

ARE PIONEERS IN BALLOON TIRE SERVICE

Another Reason Why They Serve You Better and Save You Money—

Specializing in the manufacture of tires has enabled Firestone to concentrate upon tire development, with a record of many notable contributions to more economical highway transportation.

Firestone pioneered the low-pressure tire, and Firestone Service Dealers were the first to offer car owners Full-Size Balloons, with the latest methods and equipment for their expert care and repair.

Firestone Dealers have kept up-to-date on tire development and service—continually progressing and improving their ability to serve you better and save you money.

It will pay you to call on the nearest Firestone Dealer and let him tell you how to get more mileage out of your tires. If you are in the market for new tires you will be surprised at the low cost of a set of Firestone Gum-Dipped Balloons. See the Firestone Dealer and let him handle your tire requirements.

This Is the Last Call for the Corn Borer

FINAL inspection of the corn crop clean-up is now under way in the area of Pennsylvania where the European corn borer control regulations are in effect. Farmers in eight northwestern counties of the state will receive up to two dollars an acre for the extra work they have done in plowing under or destroying all corn stalks and stubble left over from last year's crop.

The federal official in charge of control work in Pennsylvania and New York is H. N. Bartley, associate entomologist of the United States Department of Agriculture.

The inspection work in Pennsylvania is under the direction of the district and county supervisors. E. W. Strickland, Titusville, is supervisor of the district comprising Erie, Crawford, Venango and Warren Counties, and Benjamin A. Wright is supervisor of the district including Butler, Beaver, Lawrence and Mercer Counties. The county supervisors are: Howard G. Eisaman, East Springfield, Erie County; John G. Crumb, Linesville, Crawford County; Joseph A. McElhaney, Franklin; W. P. Wood, Grand Valley, Warren County; Frank D. Henry, Butler; Alexander H. Fullerton, Edinburg, Lawrence and Beaver Counties; Cyrus M. Davidson, Jackson Center, Mercer County.

Forty-eight inspectors are doing the field work. Their goal is a complete and satisfactory clean-up of every piece of corn stalk or stubble which might shelter one of the destructive borers.

Guernseys Bring Record Prices

THE National Guernsey Cattle Sale was held Thursday and Friday, May 12 and 13, at Inter-State Fair Grounds, Trenton, N. J., with record high prices prevailing and a large attendance of buyers from nearby and distant states. The highest price of the sale was $8600 for a bull, Langwater Peter Pan, bred and consigned by John S. Ames, of North Easton, Mass., and purchased by Frank B. Foster, of Philadelphia. Harry J. Heinz outbid two other millionaires for a cow, Noble Claire, which brought $7600, the second highest price of the sale, and highest price for a cow.

Seventy-six cattle were sold on Thursday, averaging $1109.86 a head, while Friday's sale of 66 cattle averaged $1037 per head. These prices exceeded those realized in Chicago and caused the National Guernsey Association to plan to hold its cattle sales every other year at the Inter-State Fair Grounds, Trenton.

For the first time in the national sale boys' calf club animals were admitted to the auction. Two cows were consigned by L. E. Scarborough, Jr., of Rockville, Md., and Wallace Williams, of Pylesville, Md. Both boys are members of the Harford County Calf Club. Scarborough's cow, Meadowland Mary, was bid in at $1000 by J. E. Andrus, Jr., of Walker, Minn. Meadowland Maid, Williams' cow, was also purchased by Andrus for $800.

The next sale at Inter-State Fair Grounds, Trenton, will be June 2 when the Ne Plus Ultra Guernsey herd of W. H. Gratwick, of Linwood, New Jersey, will be disposed of.—H.

Boston Language

It was evening. A stranger approached the motorist.

"Sir," said he, "your beacon has ceased its function."

"Sir?"

"Your illuminator, I say, is shrouded in unmitigated oblivion."

"Really, I don't understand you."

Just then a boy shouted: "Hi, mister, your lamp's gorn out."—Boston Post.

Veterinary

Conducted by Dr. J. F. Shigley
Associate Professor of Veterinary Science, Pennsylvania State College, and Veterinarian in charge of College livestock.

Advice thru this department is free to our subscribers. Each communication should state history and symptoms of the case in full; also the name and address of writer. Initials only will be published. We invite readers to make use of this service. Clippings from the column when properly preserved and classified, make one of the most valuable medical symposiums a farmer-stockman can obtain.

FEEDING MUSTY CORN.—While visiting a dairy farmer recently I noticed that he was feeding his milk cows whole musty corn on the cob. I inquired as to the effect of musty corn on the health of the cows and he replied that he had been feeding in this manner all winter and the cows showed no ill effects. His explanation was that a cow had four stomachs and was capable of resisting germs. Would be pleased to know if this farmer was correct in thus feeding.—W. W. J., Delaware County, Pa. The practice of feeding musty corn must not be considered universally desirable. However, one may feed moldy corn without unfortunate results as evidenced by the fact that the animals appear to be doing well on such diet. Good, clean feed for any animal is preferable at all times. Prices may govern how closely one should hold to such a plan. It is usually advised that such moldy food be fed to one or two animals and if no serious results follow, it can be fed generally to the herd.

CRIBBING.—I have a horse 10 years old that is a cribber or wind-sucker. Can you tell me the cause of it, the effect it has on the horse and the remedy, if any?—J. B., Armstrong County, Pa. This is a vice that develops usually before the animal is five years old. It may be induced by teething difficulties and idleness. Distended abdomen and wind colic will result. Wearing down of the incisor teeth occurs from biting hard objects. Examine the teeth and provide exercise for the animal as a means of controlling the condition.

SOW PARALYZED IN HINDQUARTERS.—I have a large sow that has gone down and drags her hind part. She has pigs five weeks old and has been outside most of the time. Would you please give me the cause and advise as to what to do.—M. M., Franklin County, Pa. During the period of pregnancy and suckling pigs there is a drain on the calcium content of the body. It would be advisable to supply mineral either as bone meal, fish meal or tankage. Feed two ounces of cod liver oil daily in the feed for eight to ten days in addition to a balanced ration. A good ration may consist of 100 pounds of ground corn, 10 pounds fish meal or tankage and 5 pounds each of alfalfa meal and oil meal. Pasture clover or alfalfa hay may take the place of alfalfa meal.

Our Readers' Classified Advertising Department

A market place to buy or sell at little expense. Over 100,000 farm families read Pennsylvania Farmer every week. Rate **6 cents** a word each for one, two or three consecutive weekly insertions; 5 cents a word each for four or more insertions. Count each number and initial and send cash with order. Orders, discontinuances or changes of copy must reach us by Wednesday of week preceding date of issue. All advertisements set in uniform style, no display type or illustrations. Poultry advertising may run here, but if displayed or illustrations used must run in display advertising columns at commercial advertising rate (65 cents per agate line). Livestock advertising not accepted in this department. **Minimum, ten words.**

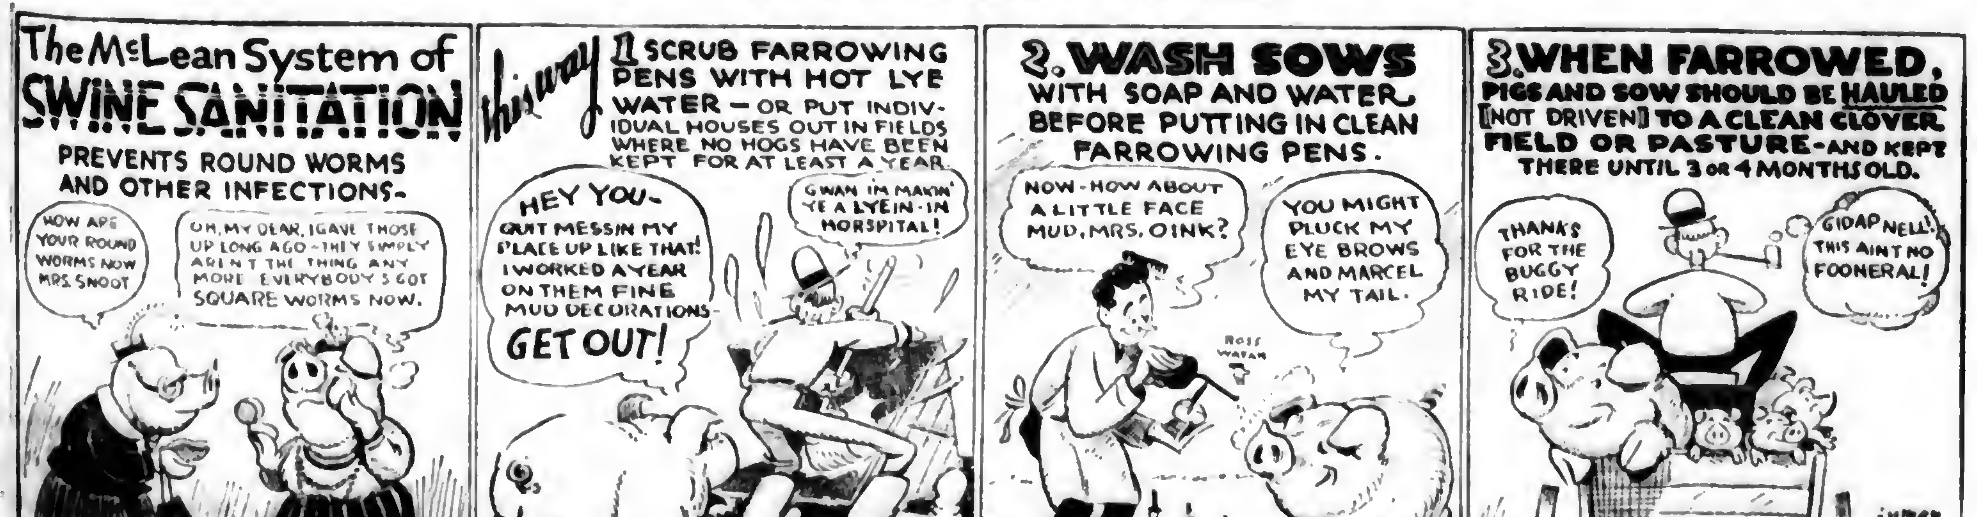
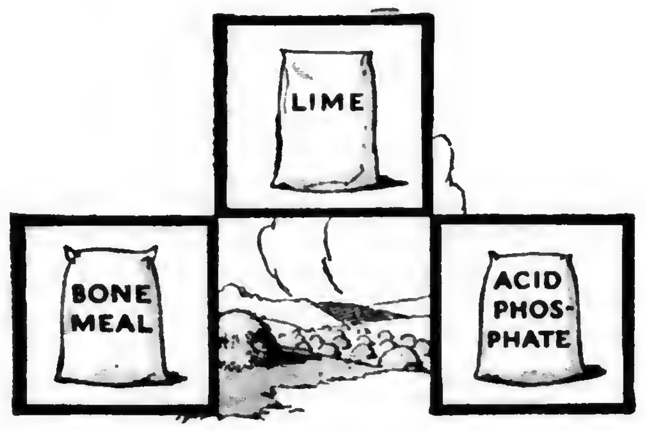
Herb the Handy Man Tells How—



The McLean System of SWINE SANITATION PREVENTS ROUND WORMS AND OTHER INFECTIONS-
HOW ARE YOUR ROUND WORMS NOW MRS. SNOOT
OH, MY DEAR, I GAVE THOSE UP LONG AGO - THEY SIMPLY AREN'T THE THING ANY MORE. EVERYBODY'S GOT SQUARE WORMS NOW.
this way 1. SCRUB FARROWING PENS WITH HOT LYE WATER - OR PUT INDIVIDUAL HOUSES OUT IN FIELDS WHERE NO HOGS HAVE BEEN KEPT FOR AT LEAST A YEAR.
HEY YOU- QUIT MESSIN MY PLACE UP LIKE THAT! I WORKED A YEAR ON THEM FINE MUD DECORATIONS- GET OUT!
G'WAN I'M MAKIN' YE A LYE-IN-IN HORSPITAL!
HOT LYE WATER
2. WASH SOWS WITH SOAP AND WATER BEFORE PUTTING IN CLEAN FARROWING PENS.
NOW-HOW ABOUT A LITTLE FACE MUD, MRS. OINK?
YOU MIGHT PLUCK MY EYE BROWS AND MARCEL MY TAIL.
ROSE WATER
3. WHEN FARROWED, PIGS AND SOW SHOULD BE HAULED [NOT DRIVEN] TO A CLEAN CLOVER FIELD OR PASTURE - AND KEPT THERE UNTIL 3 OR 4 MONTHS OLD.
THANKS FOR THE BUGGY RIDE!
GIDAP NELL! THIS AINT NO FOONERAL!

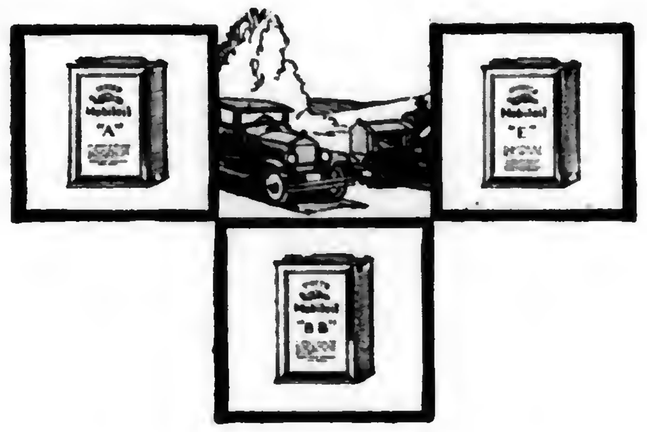
How one farmer got clover started—

A Cole County, Missouri, farmer has a 10-acre field which would not grow clover. Acid phosphate, bone meal and other fertilizers were tried without success. The county agent was consulted about the troublesome field. A test revealed the fact that the land was sour and needed 3 tons of crushed limestone per acre. The limestone was applied. During the following spring, clover was again sown and, for the first time, an excellent crop resulted.



What fertilizers tell you about buying oil

Bone meal or acid phosphate may be sufficient treatment on one field but not on another. Soil conditions vary widely. Engines vary widely, too. They vary in design, in lubricating systems and in other important factors affecting lubrication. Don't grope in the dark after the correct grade of oil. Take advantage of the recommendations of the 42 Mobiloil engineers, just as you take advantage of the advice of your county agent. By following the Mobiloil Chart you obtain an engineering margin of safety in lubrication.



2 drops of oil ..... *versus* ..... 3 drops

2 drops of Gargoyle Mobiloil cost less than 3 drops of ordinary oil. And 2 drops of Mobiloil frequently lubricate longer than 3 drops of ordinary oil. This brings the bill of Mobiloil well below the bill for oils selling for less per gallon.

And other savings usually follow the use of Mobiloil—marked reductions in carbon deposits, in overheating, in break-downs, and in repairs. Mobiloil has an extra margin of safety to meet every engine need. By supplying the most economical lubrication, Mobiloil has become the most popular oil on farms today.

If you are interested in the most economical and efficient lubrication, you will be interested in talking with the Mobiloil dealer. He has the complete Mobiloil Chart. And he can supply you with the correct grade of Mobiloil for your car, your truck and your tractor. You will find Mobiloil well worth a special trip to town, if necessary. Take advantage of the substantial saving on barrel and half-barrel orders of Mobiloil.

THE correct grades of Gargoyle Mobiloil for engine lubrication of prominent passenger cars are specified below.

The grades of Gargoyle Mobiloil, indicated below, are Mobiloil "E," Mobiloil Arctic ("Arc"), Mobiloil "A," Mobiloil "BB," and Mobiloil "B."

Follow winter recommendations when temperatures from 32° F (freezing) to 0° F (zero) prevail. Below zero use Gargoyle Mobiloil Arctic (except Ford Cars, use Gargoyle Mobiloil "E").

If your car is not listed below see any Mobiloil dealer for the complete Chart. It recommends the correct grades for all cars, trucks and tractors.

Notice!

Starting Next Week in PENNSYLVANIA FARMER

HERE is an announcement of great importance to every farmer and his family. For many years a certain class of retail merchants—there's one or more in your town—have struggled to keep in stock thousands, yes, hundreds of thousands of articles that you might need from time to time. They have furnished you a supply service of tremendous value that has never cost you a cent and never will. You have taken it for granted, used it, perhaps occasionally complained of it, yet you probably have never given this man in your town the chance to help you as he can. Now these merchants have banded together to tell you in the PENNSYLVANIA FARMER more about themselves, how they select for you the best of the products of the world's manufacturers, of the service they want you to make use of. This is an invitation for you to get personally acquainted with the dealer (or dealers) nearest you and to learn how you can benefit from the intelligent information and dependable advice he has for you on vital subjects in your everyday life everywhere around the farm. It is

a *Farm Service* of tremendous importance to each and every farm family.

Next week in the PENNSYLVANIA FARMER there will start a series of articles telling you how to get the most from this service. Read each one carefully and learn how you can easily co-operate to find new ways to do your work easily, to live more comfortably, to save expense, and to make more profit from farming. The first message is next week.

Wait!

Next Week *the "tag" will be turned over!*

It Is An Economic Crime

Americans Least Able To Pay Are Taxed Heaviest

THIS country's bill for all taxes has increased from 2 billions to 9 billion dollars a year in the last 15 years the Census Bureau tells us. That is 350 per cent and taxes continue to ascend notwithstanding the tremendous reductions in the federal levy made by the national government.

The hardest hit are the small home owner in town and the farmer in the country. The reason is that we have outgrown our simple tax system of earlier and more simple times. We have completely reversed our former rule of levying taxes according to ability to pay, the only just principle for the imposition of taxes. Instead, this most prosperous nation on the globe today is levying taxes according to inability to pay, and that is an economic crime. It is so grievous a wrong that it is an injustice from which no good can come; it is destructive.

In the early days of the country, when nearly all wealth was in land and improvements, we adopted the tax on general or real property. It was then a tax on those best able to pay and it sufficed for generations. At that time immense wealth in securities was rare. Now more than 32 billions of intangible wealth escape the payment of any tax, because tax-exempt, and other billions of intangible wealth escape the assessor because he cannot find them and they are not reported. In Chicago and other cities, hundreds of millions of dollars of intangible personal property regularly escape taxation. Our personal property tax is a joke, and the burden of paying the country's taxes falls hardest on real estate, on the farmer and the small home owner, who are least able to pay.

When it comes to the percentage of net profits paid out in taxes by great occupations, the statistician, Babson, finds agriculture is taxed 86 per cent, mining 60 per cent, transportation 36 per cent, construction 32 per cent, banking 31 per cent and manufacturing 24 per cent.

Agriculture pays 62 per cent more than manufacturing, 26 per cent more than mining which, next to farming is taxed heaviest. And this, while farmers are carrying 4½ billion dollars of mortgage debt on lands which have declined 10½ billions in value, thereby actually increasing their load of debt from 29.1 per cent to 41.9 per cent.

For the farmer struggling against debt, with his mortgage to care for, with more than his share of taxes to pay, with the necessity of buying high-priced labor-saving machinery and finding the price of everything he must buy, high, and of everything he has to sell, low—here is taxation beyond ability to pay. It greatly wrongs even the debt-free farmer.

It is so rank an injustice it cannot be defended; so damaging a wrong that it is unhealthy. For no nation may really prosper when less than two-thirds of its wealth-creating people, and far more than half, if we include the small home owner, are compelled to carry so much more than their share of our fast-growing mountain of taxes.

When it comes to levying taxes, pretty much all the states swat the land, the land-owner and the home-owner. Kansas is the greatest sinner, collecting 59 per cent of the cost of state government by taxes on general property—land and improvements.

In Michigan and Illinois with even less cause than we have in Kansas, the farmer and home owner have been driven to ask relief from the disproportionate general property tax. And in Illinois, labor, which represents the small home owner, has shown its intelligence by joining the farmers in an appeal to the legislature for a state income tax on wealth to lift some of the burden from over-taxed land. The corporations are opposing this righteous demand, their lobbyists declaring the farmers have become envious of Chicago's growing wealth and power.

Yet a greater equality of taxation must be the remedy. This may best be brought about by a state income tax and by production taxes on minerals yielded by our natural resources.

Farmers may obtain this relief if they will actively aid and support the intelligent leaders of their state farm organizations in demanding it. Notwithstanding the simple justice of their claim I fear they will have to fight for it. We shall make no progress toward levying taxes according to ability to pay until we correct the injustices of the general property tax.

Arthur Capper

From the Week's News

AT A RECENT Adams County poultry meeting a farmer testified that a suggestion of a State College Extension Poultry Specialist was worth $200 to him last year. Specialist Taylor suggested that his brooder houses be put on new ground. He put one on new ground and the other on old ground, and made $200 more profit from the one on new ground.

$ $ $

FOLLOWING are the carload shipments of peaches from the leading Pennsylvania counties during the 1926 season:

Franklin	425 cars
Berks	141 "
Adams	100 "
York	66 "
Cumberland	40 "

Of course, these figures do not take into account peaches shipped by motor truck. In 1925, due to the freeze, only six cars of peaches were loaded in Franklin County. Of Adams County's 100 cars shipped last year, all but two were loaded at Biglerville.

PENNSYLVANIA FARM RECORDS recently summarized showed that cows getting silage gave 1200 pounds more milk and 30 pounds more butterfat per year than those not fed silage. Farms in Lancaster County which used silos have an average labor income of $430.50 more than those without them, R. H. Olmstead, dairy extension specialist told Dairy Day visitors at Penn State.

$ $ $

NEARLY 60,000 different plants, representing about 6000 distinct species, have been found on the cattle ranges of the West. There is a specimen of each of these plants in the Forest Service herbarium in Washington.

$ $ $

About 5000 carloads of potatoes from other states are being sold in Pennsylvania each year during the season when home-grown potatoes are being marketed. Moral: the freight on the imported spuds would make a good profit for the Pennsylvania grower if these 5000 carloads were grown within the state.

How the State Serves Jersey Farmers

The Work of Its Many Departments Affects the Life of Every Citizen

By WILLIAM B. DURYEE,
New Jersey State Secretary of Agriculture

Secretary Duryee

THE state government with its several departments serves the people of the state in many ways. There are few, however, who realize the extent of the development of these branches of the state and the many intimate ways in which they directly affect the lives, welfare and prosperity of people who live in the rural sections.

In attempting to summarize these services, the writer, being more familiar with New Jersey conditions, describes the activities within that state, realizing that other states have attained similar achievements for their citizens. Not only should this help to inform rural people of the aid that is given them by the state, but it should also indicate methods by which greater advantage may be taken of certain less well-known services that may be secured!

The strictly agricultural activities that are carried on by the agencies set up to benefit agriculture are better known. These include the State Experiment Station and Agricultural College, with its extension division, which includes county agricultural agents.

Aids in Marketing Crops

The State Department of Agriculture is actively engaged in conserving the rural resources of the state. There will be need for this so long as livestock epidemics, insect and plant disease attacks take their toll. In addition to this control work, marketing information, crop and livestock statistics are sent out to New Jersey's farmers.

One of the most far reaching developments in recent years has been the building of highways by the aid of bond issues in all counties of the state. The development of these highways has made possible rapid and efficient transportation of farm products. About half of the state's potatoes; three-fourths of its apples and peaches; nine-tenths of its tomatoes and a large proportion of its remaining products are moved by motor trucks. It has also made available bus service that enables hundreds of farmers to reach metropolitan areas from the ends of their lanes, in addition to those who have formed the habit of going everywhere from rural towns and communities by luxurious buses that maintain accurate schedules the year round.

Millions Distributed for Good Roads

The report of the State Highway Department shows that in the 12 strictly rural counties of New Jersey, more than 17,000 miles of highway have been built, including state highways, county highways and township-and-borough-aid roads. The entire state is thus covered with a network of permanent highways and several thousand more miles are on the program for improvement within the next few years. The State Commission grants aid to townships and boroughs to the extent of $840,000 each year. In 1926, there was apportioned among the 21 counties of the state $3,300,000 and $3,400,000 is distributed to the counties thru the maintenance, repair and reconstruction of roads in the county system.

Traveling these highways and byways are the patrols of the State Police Department, rendering greatly diversified service to rural people. The use of readily available means of rapid transportation by the criminal element makes essential the protective service given by the State Police organization, equipped with equally efficient means of transportation.

The State Police Department cooperates with all enforcement agencies in the towns, townships and counties of the state. The records of that department show that in one year aid was given in 19,000 cases of trouble of one kind or another. Eleven thousand complaints were made, resulting in nearly 9000 arrests, and most of the complaints received were from people in the rural sections.

The seat of New Jersey's government. the Statehouse at Trenton.

Forests and Woodlands Developed

The Department of Conservation and Development gives direct aid to rural areas in several ways. The development of state forests as a source of timber and for recreational use; the prevention of forest fires; advice on the management of individual woodland development; and the aid to town shade tree commissions are some of these. Information is also given regarding the occurrence of underground waters and streams. Geological information of vital importance is also available in detail.

This Rural Club Has a Home of Its Own

By THOS. H. WITTKORN

TURNING an old stone water-power grist mill into a modern community hall has made the village of Westtown, Chester County, Pa., a good place to live. Located 23 miles from Philadelphia, somewhat off the beaten track of travel, altho the seat of a Quaker preparatory school and surrounded by a rich farming section, its people for a long time have had no common meeting ground.

The community is composed largely of people connected with the school, including its extensive orchards and farm. A few years ago when Dean A. Stanton was appointed business manager he wanted to do something for the employes at the holiday season and at his wife's suggestion gave them a Christmas dinner. The community club has been an outgrowth of this get-together.

Brought Idle Mill Up-to-date

The old mill building was standing idle and in need of repairs when someone suggested that it be used as a community house. The school authorities put on a new roof, second story floor and concrete runways leading from the outside ground level to the new floor. In return for this they have reserved the use of the hall for occasional school functions.

The new community club has furnished the hall, bought a piano, stage fittings, installed a modern heating plant, electric light, equipped the kitchen and provided many other things which go to make a suitable meeting place for the many needs of a community. One end of the hall is occupied by a large elevated stage, dressing room and kitchen. Seats have been provided for 150 persons and there is standing room for a lot more.

This old mill is now the home of Westtown's Community Club.

The community club meets every month with an average attendance of 100 out of the 150 members. A president, secretary and treasurer are elected annually to handle the organization but an entertainment committee, usually three men and their wives or a few young people, is appointed each month to arrange for the following meeting.

Plan Prevents Discord

This plan has been a strong factor in keeping harmony in the club rather than allowing any element or clique to dictate the character of entertainment. There is a great difference in the educational standing of the club members, professors and farm hands with their

OUR JOB is to serve our readers. Whenever you are puzzled write to us and we will help you if we can.

Little progress can be made by merely attempting to repress what is evil; our great hope lies in developing what is good.—Calvin Coolidge.

Apple Shipments from Washington

A NEW bulletin brings to light the fact that shipping apples from the Pacific Coast to the East and getting full price for them is not a business conducted on a bed of roses. So extensive had the matter of rejection by the consignee become that the Department of Agriculture made an examination into the subject. A car of apples once rejected is usually sold to the original buyer or to a new buyer at a less price. It was found that sixty per cent of the rejections were because of condition of fruit rather than because of off-color, grading or variety. The factors affecting condition were given as decay, scald, over-ripeness, freezing injury and internal breakdown. Misunderstandings and lack of complete understanding is often the cause of disarrangement. The Department recommends closer and more specific contract forms in the future.

To Boost the Sale of Oleo

AS THIS is written, the Institute of Margarine Manufacturers, an organization composed of men who make eighty-five per cent of the oleo made in this country, is holding its sessions in Washington, D. C. Advance news informs that the organization has decided to raise and spend $500,000 a year in advertising the virtues and value of oleomargarine. A former governor of Missouri in an address before the convention said: "The red blooded citizenship of America will never submit to a program of helping one class or group of its people at the expense of the rest of the people. There were some twenty bills in as many state legislatures this year designed to cripple or kill the margarine industry. . . . The good sense of these legislatures was shown in the fact that all of these selfish bills, with one exception, were decisively killed."

Another speaker pointed out the fact that proper advertising would help to educate the public to the superior virtues of margarine. Will they be able to offset the work of the Dairy Council? Not if dairymen fight as hard and as persistently as the margarine makers propose to do, and if the dairymen of the nation are as loyal to their organizations as the oleo people are to theirs. Well, if they are not they deserve to be beaten.

Do You Know Shoes?

THERE is scarcely anything that is more universally used among civilized people than shoes. From the time the baby doffs its long dresses to the time a man discards heavy shoes for bedroom slippers in his old age, shoes are a prime necessity. Yet, how little thought do most people give to the selection of shoes beyond deciding whether they can be squeezed on, or whether they are the latest style or not? Do you know anything about the kind of leather used, what part of the hide it is from, how it was tanned, or how to get the longest life and the greatest comfort from a pair of shoes? To answer these and other questions the U. S. Department of Agriculture, Washington, D. C., has just issued a bulletin,—Farmers' Bulletin No. 1523—entitled, "Leather Shoes: Selection and Care," which may be had for the asking. Many people may be enabled to greatly reduce the much-complained-of shoe bills by a careful perusal of this bulletin.

Another Record Broken

THE world was horrified, then electrified, the other day upon hearing that an American flyer had silently mounted in the air one morning, and slipped away in the direction of Paris. Only a week before two flyers had left Paris in a plane for America but never arrived and their fate is not known as this is written.

Never before had such a feat as Captain Lindbergh's been attempted by a lone man. The Los Angeles was brought from Germany to the United States in the air some years ago, but it was an immense gas-filled ship with a crew of a score or more of men. But to set out alone on an air journey of 3600 miles over water was an unheard-of attempt. Was Lindbergh a fool or a hero, a real pioneer or a notoriety seeker? Could it be done? Could a man stand the strain and stay awake long enough to make the trip? He did. His successful landing thirty-three hours after taking off answered all the questions which an anxious world had been asking since he started. He made it, and justified the faith that was in him. His was an undertaking and an exhibition of faith not equaled since Columbus set out over an uncharted sea. Such feats bring forth acclaim regardless of race or color. The French people have given him the highest possible honors, and others await him here when he returns to America.

How did he do it? By having lived a vigorous, clean life, and by storing his mind and training his hand so that he was a model of efficiency. The French people were surprised when he refused wine, champagne and cigarettes. "No, I have never used them," he said. Has this new hero given the world something to think about in addition to establishing a world record?

Others Might Do Likewise

WE HAVE just received from Mr. Bollinger, County Agent in Schuylkill County, Pennsylvania, the prospectus of a rural historic pageant to be held at the County Fair Grounds on June 18th. We are so impressed with the plan and the outline of the story to be portrayed that we heartily commend it to others. The material for the pageant was written by Miss Laura Reynolds, Home Extension Worker for the county, assisted by Mr. Gordon, of State College, Mr. Bollinger, and several farmers of the county. Three hundred people, representing nine communities will take part in the presentation.

The music to be rendered, the story to be given and the history of the development of agriculture thru the ages will be well worth seeing and we bespeak for the promoters a large attendance and hearty cooperation. At the same time we recommend that farmers and agricultural workers from other counties visit it with a view to adopting the plan elsewhere. Agriculture needs to be advertised to rural people as well as others and this is a good way to do it.

What Do You Think of Dad?

SO MUCH is being said in criticism of young people these days that it might be well to get the criticism of young people relative to parents. The pupils of a certain school district in Philadelphia were asked to write their frank, truthful opinions in a letter on the subject, "What My Father Means to Me," and over six hundred complied. They make interesting reading. Some of them are very flattering; while others are severely critical. We ask the young people of the farms, "What Do You Think of Dad?" and invite you to write your honest opinion. Sign your names to the letters but the names will not be published. No one outside our office will ever know who wrote them. One dollar will be paid every writer whose letter is published. Make them short and to the point. Parents, please call the attention of your young people to this, even tho you are not sure what they may write about Dad.

Editorial Sidelights

THE story of Westtown's Community Club (Page 3) illustrates again what can be done in the development of worth while social life in rural sections when people work together under the right kind of leadership.

Every time we read of a community organization like Westtown's we wonder why more country neighborhoods don't permit themselves to enjoy and profit by similar activities. In some sections the Grange provides the needed outlet for the social energies of the people, but in many communities there seems to be nothing of the kind. Why?

THOSE WHO ARE interested in the taxation problem will agree with Senator Capper (Page 2) that our present system, or lack of it, is an economic crime. One of the best studies of the tax question as it affects Pennsylvania farmers was completed a few months ago by Professor Weaver, of the Pennsylvania State College, for the State Department of Agriculture.

The bulletin covering the highlights of this taxation study may be obtained from the Department of Agriculture at Harrisburg. It deserves wide circulation, for it is based upon facts,—not theories,—facts carefully collected from the records in every county courthouse in the state.

THE CORN GROWERS of northwestern Pennsylvania are to be congratulated on the way they have gone about doing their part to check the spread of the European corn grower. Secretary Jordan's last minute appeal (Page 11) is directed to the few; the majority have done their part cheerfully and carefully.

In certain sections of the corn borer area in other states the farmers have been less far-sighted, which is unfortunate. If they could be persuaded to pay a visit to the sections where the corn borer has been at work for a few years they would come home only too anxious to clean up their own places.

MAY CONVENE EARLY

Congress May Be Called November 1 to Consider Flood Relief Legislation—Public Debt Being Reduced.

Washington, D. C.

NO SPECIAL session of Congress for flood relief legislation will be called at this time, but President Coolidge is considering a proposition to call the winter session November 1, a month earlier than usual, in order to give Congress an extra start on flood control legislation. This move is being urged by leaders in both branches of Congress.

Judging from the statements of congressmen and senators who are especially interested in flood relief it will be easy to get appropriations aggregating many millions of dollars for building levees and for reforestation, but it will be next to impossible to get anything for storage reservoirs, which would mean government development of power plants.

Livestock Lost in Flood

It is estimated by the Crop Reporting Board of the Department of Agriculture that at least 3,800,000 acres of crop land has been flooded during the present overflow of the Mississippi River. This is the largest area flooded of which the government has any record.

The losses of cattle and hogs are reported to be very large. In Mississippi it is estimated by government authorities that 10,000 cattle and 50,000 hogs have been drowned. While the losses are considerable in other states, it is not thought that they will equal those in Mississippi. In the rehabilitation of this region it will mean the purchase of many cows and breeding hogs in other states outside the flooded area. Many horses and mules will have to be brought in from other sections.

Treasury Surplus Grows

Notwithstanding the heavy cuts in income taxes in recent years tax surpluses in the United States Treasury continue to pile up. There will be a tax surplus of $500,000,000 in the Treasury by the time Congress meets, according to Senator Simmons, of the Senate Finance Committee. The present administration is rapidly reducing the public debt, and will undoubtedly continue to do so as long as these surpluses accumulate. This is in accordance with the demands of the National Grange and other farm organizations, whose representatives argue that the debts should be cancelled while the dollar is cheap and money plentiful in the Treasury.

Working on Local Tax Problem

Few state and local treasuries are troubled with surpluses. Agricultural and industrial organizations in 30 states are cooperating in a plan to solve local and state tax problems. The movement, which is known as the "Better Understanding Between Industry and Agriculture," according to Henry Harrison Lewis, of Washington, executive director, is an effort to find some common ground on which intra-state groups can work in harmonious cooperation in such matters as state and local administrative methods and taxation.

The executive committee of the movement has begun a systematic effort to encourage the formation where possible of a central committee in each state, to consist of the State Grange Master, the State Farm Bureau president, and the officials of the state industrial association. This committee will urge the cooperation of other civic groups in concerted efforts to establish and enforce budgets and to control state and local debts.

Lindbergh Honors Dairy Cow

The first request of Aviator Charles A. Lindbergh, after reaching the home of Ambassador Herrick in Paris, reported in every newspaper in America, was "a bottle of milk and a bath," says A. M. Loomis, secretary of the American Dairy Federation.

Mr. Loomis considers this to be the finest tribute to the product of the American cow which has ever been paid. It is no less a tribute to the character and to the physical and moral sense of the aviator. A previous dispatch from France, telling of the plans made to receive this greatest of all flyers, and to care for him once he landed safely told of the stimulants of various kinds which the doctors thought he would welcome. They never had a chance to offer them.—E. E. R.

OLD SYSTEM PASSES

Appropriation Money Will Be Allotted on Unequal Basis No Longer—Chickens Lead All Crops.

Harrisburg, Pa.

WITH the coming of the first financial year of the new state administration on June 1 will pass the system of dividing appropriations between the two years, which caused some complaint of late owing to the fact money was allotted on an unequal basis. This situation was much noticed in the state's agricultural work, notably in cattle indemnity matters, as less than half was allowed for one year and the other had the advantage. The plan to be followed will be to employ the money as needed and as it is available, the work being proposed on a scale which will permit of no interruptions. The same plan is to be followed in regard to other state appropriations. Immense sums of money will become available this week for all manner of state activities, but the new administration will keep in close touch thru its budget bureau, now a part of the Governor's office.

Move Slowly on Forestry Purchases

According to plans outlined by the forestry authorities, lands for addition to the state reserves will be carefully selected, largely where they will link up existing reservations or where they will protect water supplies. Numerous large tracts have been offered, but the prices are not deemed attractive. The half billion provided is the first for purchase of land in four years.

To Vote on Bonds in 1928

Contrary to some announcements there will be no proposed amendments to the constitution voted upon at the election this year, but the new road, forestry, charitable and other loans will go before the people in November, 1928. No funds carried by them would be available unless passed and legislation enacted by the general assembly of 1929.

Nearly Everyone Keeps Chickens

Some interesting figures provided by the State Department of Agriculture show that chickens are the reigning crop on Pennsylvania farms. About 90 per cent of the farms have fowls, Lancaster having the largest percentage. Three-fourths of all the farms raise corn and about the same percentage have potatoes. The figures have been compiled by counties and provide a study of unusual importance to business men as well as farmers.

Rains Delay Road Work

Rains hampering farm work have caused serious checks to contractors for road construction in every part of Pennsylvania. Some of the firms just awarded jobs have been unable to get started.—T. C.

GO BY FAST FREIGHT

Perishables Shipped to New York on New Schedule—Rigid Restrictions Bring Profit to Club Members.

Trenton, N. J.

ASPARAGUS, rhubarb, strawberries and other highly perishable crops from central and southern New Jersey are being marketed this season in New York City under a special fast freight schedule. The time of arrival of the perishables in the Jersey City yards has been advanced to 8:30 as opposed to 11:50 under the old schedule. The new fast freight arrangements came to a head as a result of conferences between central New Jersey County Boards of Agriculture and the railroad representatives. Motor truck concerns have offered high competition with the railroads for this perishable trade this season, accounting possibly in large measure for the willingness of the railroads to advance the schedule and give a real marketing service this year. The loading time at shipping point has not been advanced, the saving in time being in the railroad run.

Egg Club Tops Market

The Quality Egg Club, of Vineland, N. J., is out for more members but it is adhering rigidly to exceptionally stringent rules on quality which actually make it impossible for a member to join unless he has the highest grade of fresh eggs. By adhering rigidly to the restrictions imposed upon members, the club has been able to secure an average premium of one cent a dozen over a period of two years on the New York market. The premium would be even higher, officers of the club state, if a larger number of Vineland poultrymen would adhere to the requirements as laid down by the club. There are still too many Vineland eggs going on the market which are not the last word in quality altho well above the general level of other nearby eggs on the metropolitan market.

Optimistic Over Milk Outlook

Mercer and Hunterdon County dairymen using the Trenton market are optimistic on local milk prices for the summer and early fall. The rigid testing against unprofitable producers has reduced the total volume of immediate milk supply to some extent, and a definite increase in consumption of dairy products in the Trenton area is apparent. These two facts have given local dairymen considerable reason for optimism. The county agent is advising dairymen not to rely entirely upon pasture this season but to continue feeding thruout the season to encourage heavy milk flow.

Talk Rural Credits

The recent survey by the State Department of Agriculture on the credit facilities available to New Jersey farmers is continuing to bring in considerable expression of approval from bankers and prominent farmers in leading production counties. The Department reports that the state survey, by bringing out the different methods of federal financing open to the farmers, will increase the usefulness of federal credit system to truck growers, poultrymen, dairymen, potato growers and orchardists, all of whom require credit for periods of varying length. The Department is further urging farmers to keep accounts and to make a definite analysis of their operations along the same lines as other business enterprises. Such farm accounting puts farmers in a better position to receive loans.—B.

WOULD CUT OVERHEAD

Questionnaire Finds Majority of Dairymen Favor One Organization—Milk Must Be Advertised.

Ithaca, N. Y.

THO too many dairymen consigned the milk questionnaire sent to all producers in the milk shed to the fate that awaits most questionnaires, yet a goodly proportion expressed themselves, as found in the final summary by the Milk Program Committee. More than 4100 answered the questions and 90 per cent of them definitely favored one farmers' organization to sell the milk products of the farms. Seventy-five per cent of them were in favor of the organization's owning or leasing the country stations and other equipment. This would permit the closing of duplicate plants. This would eliminate the biggest single item of unnecessary overhead.

Milk Needs More Advertising

The Milk and Milk Research Bureau of Washington finds that in this country less than three cents a day is spent for milk and milk products per capita. In the opinion of the bureau it is the lack of regulation of the flow of milk to the markets the year round that accounts for many of the troubles of producers and the public. But 45 per cent went into fluid milk, eleven into butter and seventeen into cheese. The bureau is planning to include the miracles that milk will do for the fat and the lean, the sick and the well, in its educational campaign. Apparently the milk business could stand considerable publicity on a basis to that used by other industries, with much benefit to all concerned.

Loses Syrup Championship

This state has lost its place as the first producer of maple syrup and maple sugar. Vermont this year regained its title as the biggest producer, producing 1,417,000 gallons as compared to New York's 1,003,000. Last year Vermont produced 980,000 gallons and New York 1,128,000. The peculiar spring weather cut production in this state.—M. G. F.

If you want extra traction and long tread wear in addition to balloon tire comfort, be sure you get this quiet-running *new-type* Goodyear All-Weather Tread

You needn't send away for it

Right in your home town is the greatest low-cost tire mileage combination you can get anywhere.

That combination is the quality of Goodyear Tires and the *service* performed for you by your local Goodyear dealer.

He sells the world's finest tires at a range of prices to fit any pocketbook, and *you can see the tires before you buy.*

He recommends the right size and type of tire for your car. He puts it on the rim for you, fills it with air. He helps you give the tire proper care after the sale.

The Goodyear dealer's service will cut your tire bills down. Save you time and trouble. It's handy always; you needn't send away for it.

It is part and parcel of the Goodyear policy: *to build the greatest possible value into Goodyear products,* and *to provide facilities so that users can get all this inbuilt value out.*

Goodyear makes a tire to suit *you*—whether you want the incomparable All-Weather Tread Goodyear, the most famous tire in the world, or the lower-priced Goodyear standard quality Pathfinder

NESHAMINY GARDENS

WHERE AN EDITOR WORKS AND THINKS

BY R. P. KESTER

WELL, Neshaminy Gardens is a real place at last,—real because there is somebody living on it. The two boys, Lewis and Walter (and, of course, their parents), moved into the new house on May 21st. But we had no Aladdin lamp, nor magic wand, by which the home was placed there out of the air. Those who have built anything during the last few years will know just what I mean by that. It requires a great deal of thinking and planning, and a great deal of money to make dreams come true in these days. But the house is there and it is a good one. It is light, airy and well equipped, and the view in every direction tends to inspire the soul and rest the body. Still more about it later.

◆ ◆ ◆

THE cool weather caused the asparagus to slow up in its growth last week and this quickly affected the price. The smaller daily cuttings brought about the same amount of money as the larger amounts when the weather was favorable. This is a good and quick illustration of the economics of farming. In conversation with a commission man the other day I learned that prices of produce in general this spring average lower than a year ago. His explanation was that there are more people out of work, or have less to spend, than was the case last year. We bought some strawberries the other day for eighteen cents a quart,—far below the lowest price we received last year.

◆ ◆ ◆

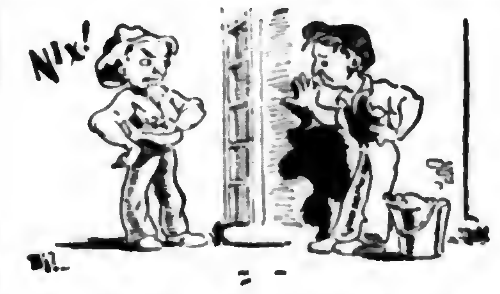
WE WERE happy to find a nest of ring-neck pheasants in some weeds only a few yards from the new house where men had been working all spring. It had twenty-one eggs in it and we were building on seeing a family of these interesting birds develop from the old ones who have made their home on Neshaminy Gardens for several years. But our hopes are blasted. A crow, or some other miscreant, broke up the nest and destroyed the eggs. We found some of them broken in the asparagus field as if they had been dropped from above. Success to the New Jersey crow shooters.

◆ ◆ ◆

MANY people have the idea that there are neither food nor fertilizing elements in cabbage. However that may be, I am, like Jiggs, extremely fond of corned beef and cabbage, and I have evidence that the latter part of the statement is not true. Two years ago we gathered and hauled off the stumps and loose heads from the cabbage patch and piled them on one end of a strip of land. The pile rotted down and we planted sweet corn there last year. This year we planted spinach, and altho it was all fertilized the spinach on that spot of about a rod square is four times as big as it is elsewhere.

◆ ◆ ◆

AS WE feared, the freeze in April was too severe for the peach buds. While it did not blacken them inside they were evidently injured so that very few set fruit. The Miss Lola were first out and seem to have been past the stage to be injured as they have several peaches started. . . . Caterpillars are extremely numerous this season. Wild cherry trees are their favorite hosts, but they are not above stripping young apple trees. I hope the time will come when the people who allow caterpillars to propagate unmolested may be prosecuted. There are tens of thousands of wild cherry trees growing on land not in use, most of it held by land speculators, on which one may see millions of web nests. . . . What creatures of habit chickens are! Our little fellows, after spending two weeks in the brooder house, became so attached to their indoor home that it was difficult to induce them to go out of doors when the run was completed and ready for them. . . . I wish to thank the many friends, who, noting my remarks about blackcap raspberry plants, have written to tell me where to get disease-free stock. I promised my gratitude for such information. Well, here it is, and in generous measure.



The Cheerful Plowman

Punctuality

MY NEW hired man is rather slack, he does not move with zest, he's just two steps behind, alack, he does not meet the test! There long has been a certain plan well stationed in my mind, 'tis—be ahead whene'er you can, but never be behind! I never yet have known a guy, to make a major grade who did not diligently try to beat the clock a shade! No fellow ever wins a prize who does not rush the sun, he sort of has to plan to rise before his sleep is done!

Said I to Jim, that is my man, "I do not wish to boss, nor do I now, or ever, plan to be too harsh and cross,—but for your sake as well as mine you'd better shift your gears or you will be clear out of line, you'll find in future years! Don't let your labor be a load, don't let your labor crowd, or it will push, and prod, and goad until you're in your shroud! I 's better far for you to rush your labor just a bit, and then your coffers will be flush as golden moments flit!

"It is that little extra kick, that little extra shove, that makes the poor-house keeper sick in this fair land of love! That little notch ahead of par, that little added touch, that little speeding of the car may not appear as much, but 'pon my word it represents the profit every time, it brings those little six per cents, it brings the extra dime! I hate to preach and give advice, but pushing on the reins saved me and Dobbin once or twice from mile-a-minute trains; had we been just a bit behind and not a bit ahead, we would have felt the squeal and grind of wheels as dull as lead! So, Jim, my lad, step on the gas and shift from middle gear, and you'll be in a higher class within another year!"—J. E. Tuffl.

CHEVROLET
for Economical Transportation

You can buy –

No longer is it necessary to pay a high price for beautiful appearance, modern design and fine performance—for Chevrolet gives you every one of these elements of costly-car quality at the lowest prices available on a gear-shift automobile!

With the new Fisher bodies agleam with striking colors of lustrous, lasting Duco, individualized by full-crown, one-piece fenders, bullet-type headlamps and distinctive hardware—the new Chevrolet is a car of commanding style and elegance. Truly, the Most Beautiful in Chevrolet History!

No car, regardless of cost, is more modern in design and equipment. The powerful Chevrolet valve-in-head motor, with three-speed transmission and sturdy single-plate disc-clutch, has been made even better by such pronounced improvements as AC air cleaner and AC oil filter. A coincidental ignition and steering lock; a sturdy, handsome tire carrier and a full-size 17-inch steering wheel are further quality features that typify complete modern equipment.

And Chevrolet performance will delight you wherever you go. Velvety smoothness at every speed up to wide open throttle. Flashing acceleration that denotes a tremendous reserve of power! Cradled riding ease over the roughest roads!

Go to the nearest Chevrolet dealer and drive the new Chevrolet. Learn for yourself why Chevrolet sales are reaching new spectacular heights—with tens of thousands of new buyers turning to Chevrolet each week!

PROTECTION From Insect Pests and Fungus Diseases

The SPRA-MOR effectively protects truck gardens from those busy destroyers which—if unchecked—cut so deeply into your profits. To secure the maximum returns from careful cultivation, you must spray.

The SPRA-MOR power traction sprayer is the most sensible and efficient plant sprayer ever designed. One dependable motor drives two stage compressors and propels machine—at high, medium, or low speed. Air, forced into the chemical tank at the pressure needed produces a fog-like mist completely coating the plants without waste of material. Reaches top and both sides of row. Absolutely dependable. Saves its cost many times over for growers of cucumbers, onions, celery, melons, beans, tomatoes, potatoes and other crops.

Built in three sizes. Write today for descriptive folder and prices.

New Water Systems Simplify Irrigation

IF THE land to be planted in late cabbage is unoccupied by some other crop and remains unplowed it is important that it be plowed and dragged at once to conserve moisture and give time for the reestablishment of capillarity. If the fertilizer is put on and harrowed in when the plants in the nursery bed approach planting size one will be in position to rush the actual setting as soon as favorable conditions arrive.

It is not uncommon to experience periods of hot, dry and windy weather during which it is almost impossible to secure good stands. Everything in readiness enables us to profit from the least shower. Moreover, timely plantings almost invariably outyield late settings. In addition there is time to fill vacancies if planting is not too long delayed

Irrigation has been considered by some as the answer to many of the gardeners' problems and trials. It is, indeed, a wonderful assistance, particularly in bringing seeds thru a soil surface which has been crusted by heavy rains and in setting out plants during dry periods. When seeds are to be sown it is often wise to irrigate thoroly and sow in the moistened seed bed. The finest stands are secured whenever seedlings come up without rain or irrigation on the surface.

Portable Line Is Effective

With the increasing numbers of farm water supply systems there is no reason why a great many farm gardens should not receive the benefits of irrigation. It is possible where the pressure is good to attach a sprinkler line 50 or more feet long to a three-quarter-inch garden hose. Any of the several irrigation companies will furnish information.

Such a line may be shifted handily from one part of the garden to another. High posts or other permanent supports are unnecessary. Simply lay the pipe on the ground between rows of low-growing vegetables or on blocks or small boxes.

Where a more extensive installation for commercial gardening is under consideration thoro investigation is in order. More than one company should be interviewed and careful estimates of cost should be prepared. Irrigation increases expenses and to be justified must increase returns enough more to leave a margin of profit.

Satisfaction Depends Upon Layout

On fertile soils, with intensive cropping and good management, a properly designed irrigation system usually returns a profit. It is a matter for careful consideration and the correctness of the layout from an engineering standpoint will do much to determine the amount of satisfaction secured.

In my own experience I have been well pleased with the portable lines which can be moved from place to place as occasion demands, mains and riser connections having been laid over an acreage several times that which the distributing lines could cover at one time. This arrangement greatly reduces the capital required per acre yet gives complete insurance against loss by drought. This department is at the service of subscribers in connection with this problem as well as others. —G. S. W.

Rambles of a Pennsylvania Fruit Grower

XI. What About Florida?

WHAT about Florida? I ask myself this question as I pass the last Florida milepost on the Old Spanish Trail, headed westward for Mobile, New Orleans and California. It is a state of amazing contrasts. One can be either rapturously enthusiastic over it or morosely cynical and have abundant justification for either state of mind. To attempt to evaluate Florida after living in the state two or three weeks is like passing judgment on the temperament of a woman after knowing her in only two or three of her innumerable interesting moods. Judgments based on partial knowledge are apt to be misleading. With this extenuation and apology I hasten to my story.

Florida (as seen thru my eyes) is positively devoid of natural landscape beauty, tho it has many "scenic routes." It has excellent highways, but not much to look at from them except innumerable roadside signs. I object to these in beautiful Pennsylvania but find them a relief and distraction here. The country is monotonously flat and wholly uninspiring, except where man has made it so. Water is its sole redeeming feature. If it were not for the Atlantic, the Gulf and innumerable lakes, Florida would be drear, indeed.

Then there is the sand. It gets dreadfully monotonous. I shall never see sand again without thinking of Florida. It is very good for certain crops, on occasion, but hard on the eyes and the temper. The sight of some honest black loam, or even red clay, would gladden my heart. The natural products of Florida, in the order of their respective impact on my consciousness, are:

1. Sand
2. Mosquitoes
3. Sand
4. Fleas
5. Sand
6. Heat
7. Sand

To this short and select list might be added a rich assortment of reptiles, chiggers and other vermin but I refrain for fear of wounding the sensibilities of any Florida enthusiasts who might read this by mistake.

On the other side of the picture are two tremendous assets—a climate that is really remarkable and a horticulture that is unique, reasonably profitable and rich in promise of development. These two assets will make the state rich, at least the hardy survivors of the gauntlet of perils indicated above. There are also orange groves, a joy to the eye and a garland of fragrance, beautiful flowers, mocking birds and other delightful things.

I realize the futility of writing a paragraph about Florida climate. In places and at times the cold strikes one to the marrow; in places and at times the heat sears one to the vitals. On the average and as a whole, however, it is delightful, especially near the coast and on the larger lakes. After bathing luxuriously on Florida beaches in March, with snow two feet deep on my sidewalk at State College, I have not the heart to cast any more aspersions on Florida climate. But I will say this—that the statement appearing in certain literature, "Our summers are delightfully cool and refreshing" probably is slightly exaggerated.

But the Pot Boiled Over

What I enjoyed most about Florida, however, was the wholly unconscious humor of her realtors. It is a pity I did not come to the state a year or two ago, when the pot was still boiling. It boiled over last year and put the fire out. Nothing much is left but ashes.

I suppose nobody but a conservative Yankee with a somewhat distorted sense of the ridiculous would see anything to laugh at in the subdivisions which dot the Florida landscape. Far, far, out in the wilderness I come upon serried rows of white stakes and learn with interest but without enthusiasm that this is the town site of Boosterville and that lots on Royal Palm or Ponce de Leon Avenue may be secured for $1500 each, on easy payments.

Every little straggling village, apparently, had its "development" and aspired to be a city. Each one has an imposing "gateway." The realtor's office occupies a strategic position along the wayside, for all the world like a giant spider lying in wait to pounce on the unwary fly. Only a few months ago these projects were abustle and aglow; now they are left hanging in midair, without any visible means of support, unkempt and forlorn, like some human derelict thrown up by the currents of fate.

Realtors Have Much to Learn

There is tragedy and blasted hope here; but I have to confess that these Florida "developments" affect my funny-bone more than my lachrymal glands—the sheer nerve of the men who could lay out sub-divisions in such outlandish places and ask such astounding prices; and the unbelievably long white wool of the sheep who were clipped so easily. There were, of course, a considerable number of land developments that were fully justified by natural advantages but as for most of the recent subdivisions—it is to laugh.

Apparently Florida realtors have not yet learned their lesson. They are not yet prepared to accept their losses. Prices are much reduced—often cut in half—but in most places they are still beyond reason. There is still a great deal of water to be squeezed out of this lemon before much progress can be made. This may take several years.

I get a lot of kick, also, out of these Florida "heights." I attended the initial booster meeting of a belated boom project which was mod-

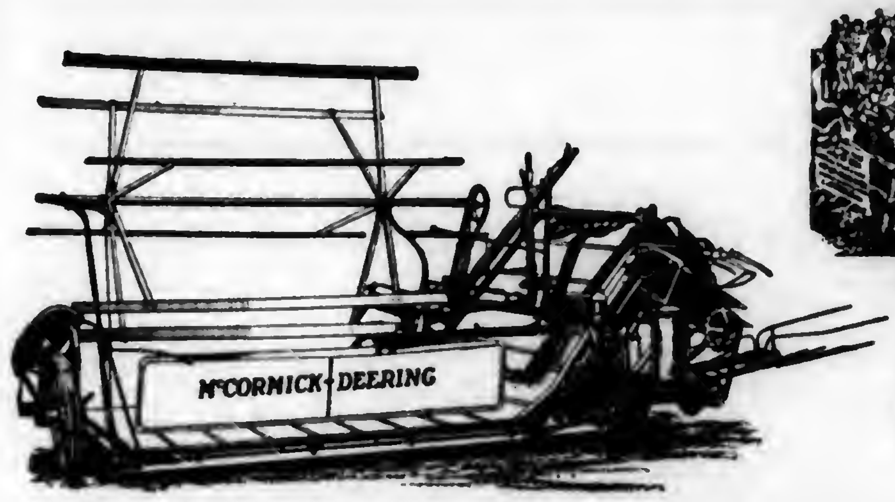
Motor-driven cultivators and a check-row transplanter on a Cumberland County, New Jersey, truck farm.



The testing of the first McCormick reaper near Steele's Tavern, Va., A. D. 1831. Drawn from an old lithograph.

Less than a century ago came the golden age of farm machines, dating from 1831, when Cyrus Hall McCormick invented the reaper, the forerunner of the modern binder.

The McCormick-Deering
Combines the Best of McCormick and Deering!

IN order to build the one best binder it is possible to produce, the Harvester Company has combined the popular McCormick and Deering grain binders into one improved, perfected machine. The McCormick's *great strength* and *ability to withstand severe abuse* and the Deering's *exceptional lightness of draft* have been brought together for you.

There are more McCormick and Deering binders in the grain fields than all other makes together. You can now have, in one machine, all the features that brought this about. And the new McCormick-Deering has additional features that were never found even on McCormick and Deering binders.

There are many improvements on the new McCormick-Deering that your old machine does not have. They mean more work in less time, fewer stops in the field, longer life, lighter draft, and easier and more comfortable operation. You will certainly want to get acquainted with these improvements. Check them against your old machine. Your local McCormick-Deering dealer will help you by showing you the new McCormick-Deering and pointing out the features your old machine does not have.

McCormick-Deering binders are built in 6, 7, and 8-foot horse-drawn sizes. Also, the 10-foot tractor binder for operation from the power take-off of the McCormick-Deering tractor.

See these modern binders at the local dealer's store

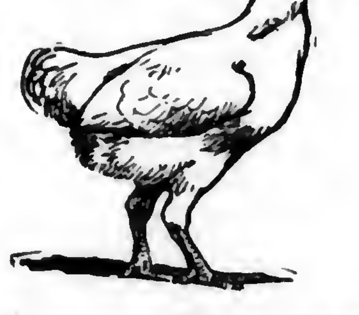
Don't be Pennywise Now



Feed Larro Growing Mash

The poultryman who skimps on feed or lets the chicks rustle for themselves after they are six weeks old, is indeed "penny wise and pound foolish."

For it is the care and feed that the chick gets during the growing period that determines how profitable that chick will be for you later on.

Larro Growing Mash contains—minerals and dried buttermilk and other choice ingredients—everything that growing birds need, in just the right proportions to build big, strong frames, capacity and vigor. It keeps them bright and active, and brings them to the laying season full of vitality and ambition.

In hundreds of tests made in comparison with other growing mashes, Larro has repeatedly proved that it does more to help produce better eggs, more eggs, and greater hatchability than any similar feed.

It requires only about eight pounds of Growing Mash to bring a chick through this stage of its development, and when so small an expense will not only protect the investment you have in the chick, but guarantee you more profit later on, you will indeed be wise to feed Larro.

POULTRY

R. L. SCHARRING-HAUSEN
Staff Contributor and Adviser
Glenview Farm

Weasel Losses Can Be Stopped

THE occasional loss of poultry due to weasels on our farm has been the result of tall grass on the range which gave the pests a chance to hide. If you have the chicks ranging where they are near high grass it pays to occasionally go thru the grass and see if any chicks are found. If a chick is found with bloody cuts on the neck it is apt to be the work of a weasel.

The weasel likes the blood of the bird best of all. Next it seems to prefer the brain. It only eats the body when other food is very scarce. A neighbor who lost chicks from a weasel hung up a freshly killed chick over a small steel trap. That night the weasel raised up over the trap to reach the chick and came down on the trigger.

We Give Them No Hiding Places

Our best protection from weasels has been in mowing the range to keep down the grass where it becomes too thick. This eliminates the weasels' hiding place and they do not like to come out in the open. Next we allow no places where weasels can hide and breed. They like stone piles, brush heaps or low wooden buildings with hiding places under the floor. A weasel is quite fearless of men. I have whistled and clapped my hands near a stone pile where one was known to hide and had it immediately come out to meet the charge from a shotgun.

Colony houses should be closed each night at sundown to prevent serious losses in one night. Weasels are largely night rangers and if the hunting is poor at that time they are apt to move on to another farm and the daylight losses will be reduced to a minimum.—R. G. K.

Right Feed Best Tonic

TO H. S. C.:—Hens often get mopy and out of condition in the spring, due largely to unnatural conditions such as confinement, lack of green feed, overfeeding, etc. The purple combs indicate some form of digestive trouble such as constipation or liver trouble due to heavy feeding of starchy feeds. If you supply plenty of green feed or let the hens out such troubles are helped. It might be well to give Epsom salts at intervals, at the rate of one pound per 100 birds, usually given in the drinking water.

I do not recommend the constant use of tonics in the mash, believing that proper diet and management will keep the birds in good condition, but there are times when the use of a tonic proves beneficial. Here is a formula given by one of the experiment stations: 1 pound pulverized gentian, ½ pound each of pulverized ginger and saltpeter, ½ pound pulverized ferric sulphate. Two or three tablespoons of this mixture are fed in 10 quarts of mash.—R. L. S.-H.

Leghorns Lost Appetite

My White Leghorns had been doing fine but lately I notice several are droopy. They have not lost their appetite but do not seem to have vim to get after their food. They act as tho their backs might be weak.—S. Z., Franklin County, Pa.

Hens that have been in confinement all winter and that have been laying heavily often break down at this season and act as you describe. Their digestive systems or livers, and sometimes the egg tract, fail to function properly as the result of unnatural conditions or improper management, causing various troubles. An occasional physic of Epsom salts, one pound in the drinking water per 100 hens, will help matters. At least five pounds of green stuff per 100 birds should be provided daily if the birds are not on range. Milk in some form is also good to keep them healthy. If you see any indication of worms feed some tobacco powder in the mash at the rate of two pounds of tobacco per 100 of mash for a month.—R. L. S.-H.

Any Kind of Milk Is Good

I have been told that I ought not to give my little chicks the diluted condensed buttermilk to drink while I am feeding the buttermilk starting mash. Will you please tell me what you advise in the matter?—Mrs. B. D. W., Chester County, Pa.

I think you will find the feeding of milk in any liquid form beneficial to baby chicks whether the mash contains a dried milk product or not. However, water should be provided in separate fountains.—R. L. S.-H.

No Accountant

Farmer (to new farmhand)—Well, Pat, have you counted all the chickens?

Pat—Yes, sor, sure I counted all of 'em 'cept one.

Farmer—Why, what do you mean?

Pat—Well, sor, that little white one run around so fast I couldn't count him, but I counted all the rest.

Sunshine Keeps Them Healthy

This Rural Club Has a Home of Its Own

(Continued from page 3)

wives meet on common ground, so that the rapid change of programs has proved a great benefit.

When the young folks have a turn at the helm it is their accomplished high school friends who help them provide the evening's pleasure, often a school play. Children are given a prominent part in all club activities and a front row of small chairs has been provided in the hall for them.

Dues are ten cents a month or twenty-five cents a quarter, one dollar a year if paid in advance. Members' children under twelve years of age are entitled free to all club privileges. Refreshments, usually ice cream and cake, are always served at the regular meetings.

The women's auxiliary is the real money power behind the club. They held a fair last year which cleared $600, all of which was spent for equipment and improvements. Once a year they get up a play to raise money for the general fund and in many other ways help to keep the community spirit alive.

Many Organizations Meet Here

The new hall is used for many meetings besides the stated ones of the club. It has made possible Sunday evening union services and a Sunday school for the community. A circulating library with several hundred volumes, contributed by members, has been started and is well patronized.

The League of Women Voters, Needlework Guild, 'Ladies' Auxiliary, Camp Fire Girls and Boy Scouts all enjoy the free use of the new hall for their meetings. It is the polling place of the district at election time and several organizations not of a community nature use it at a nominal rental.

Indeed, the Westtown Community Club and its hall would be sadly missed if it suddenly disappeared. Those who have nourished it from the beginning can hardly realize the place it has taken in the life of the folks it serves.—Thos. H. Wittkorn.

A Few Fields Still Need Attention

THE following open letter has been addressed to the farmers of northwestern Pennsylvania by State Secretary of Agriculture Charles G. Jordan:

TO THE FARMERS AND GARDENERS OF THE CORN BORER AREA:

The time for a complete clean-up of all the remnants of last year's corn crop has almost expired. A great deal of the work has already been thoroly done but there are some fields that have not yet received the finishing touches.

We again urge all farmers to complete the work immediately and thoroly in order that they may have the satisfaction of having done their full duty and that they may receive their reward for so doing.

It is not the wish of the Federal Government or the State Department of Agriculture to deprive anyone of their compensation and to add the expense of having outsiders go in and complete the work, but if any farmer fails to make a complete job the work will be done by the Federal Government and the responsible party will have to pay the bill and lose his compensation.

Please get busy and finish your work that it may be said no Pennsylvania farmer was weighed in the balance and found wanting.

Sincerely yours,
C. G. JORDAN,
Secretary of Agriculture.
Harrisburg, Pa., May 18, 1927.

FAMOUS EVERYWHERE for Endurance and Thrift

Although lower prices and larger, more beautiful bodies by Fisher have created wildfire interest on the part of new thousands of buyers—

—the worldwide success of today's Pontiac Six is largely based on those two great fundamentals which made it the most popular car of its type ever introduced. And *those two fundamentals are endurance and thrift!*

You can drive your Pontiac Six all day long at full throttle speed—because from headlamps to stop light the car is constructed to endure the most pitiless uses—because its engine is the largest used in any six selling up to $1,000 and all other units are designed up to that standard.

You can travel rough and rutty roads in perfect confidence—because every detail of the car was proved by three years testing on the great General Motors Proving Ground.

And when you have occasion to check back on upkeep costs, you will be amazed. For the Pontiac Six was designed to deliver quality six-cylinder transportation at the lowest cost in history. And it wouldn't be winning its present success, if that were not the case!

New 1927 SERIES DeLaval Separators

"Easier Turning"

These new De Lavals are the easiest starting and turning separators ever made. Try one and you will agree they are.

Cream separator users who have seen and tried these new De Lavals pronounce them the "best yet." They are without doubt the cleanest skimming, easiest running and most convenient separators ever made.

Other new features are:

1. **Turnable Supply Can:** The supply can may be turned so that tinware and bowl may be put in place or removed without lifting the supply can from its position on the separator. Every user will like this feature.

3. **Oil Window:** The new oil window enables you to see at all times the level and condition of the oil. It shows at a glance whether or not the separator is being properly oiled.

4. **Floating Bowl:** All new De Lavals have the wonderful "floating bowl" now used in De Laval Separators with such splendid results. It is self-balancing, runs smoothly without vibration, with the least power and wear, skims cleaner and delivers a richer, smoother cream.

Try one of these new De Lavals side-by-side with your old separator or any other machine. You will agree the De Laval is superior in every way. Trade allowances made on old separators. Sold on such easy terms they pay for themselves.

Dr. Hess Fly Chaser

makes cows milkable

They relax. They let down. You get the last drop.
It is long lasting.

Dr. Hess Fly Chaser has the odor of the pines. Because of this odor it serves a threefold purpose:

First—It is the most effective fly and mosquito repellent known to science—quick in action, long lasting.

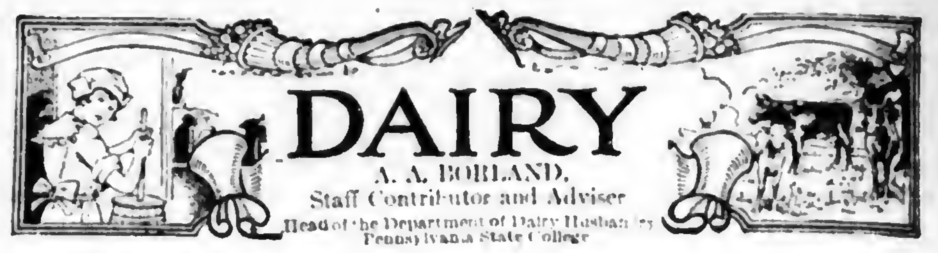
Second—It is an excellent disinfectant. Therefore, while it is keeping the flies away, it is also destroying the disease germs that attack your cow's body—disinfecting your barns, and injecting into the atmosphere a most healthful odor.

Third—No herd sprayed with Dr. Hess Fly Chaser ever suffers from warbles, which cause a great annual loss to dairymen and farmers.

It does not blister—does not stain the hair—does not taint milk. Applied to the hands and face, it keeps the mosquitoes away.

If Dr. Hess Fly Chaser does not prevent the milk slump, make your cows milkable in fly-time, save your horse-flesh all summer long, it will not cost you one cent.

DR. HESS & CLARK, Inc., Ashland, Ohio



DAIRY

A. A. BORLAND,
Staff Contributor and Adviser
Head of the Department of Dairy Husbandry
Pennsylvania State College

Good Sires Make Good Herds Better

AN "AT HOME" to the dairymen of the nation was held at Washington, D. C., late in April by the U. S. Bureaus of Dairying and Agricultural Economics and the U. S. Department of Commerce.

The event was arranged by E. W. Bailey, Pittsburgh, Pa., president of the American Dairy Federation and A. M. Loomis, Washington secretary, and was attended by representatives of the twenty-four national dairy organizations, which collectively make up the Federation, besides large numbers of individual dairymen.

The purpose of the visit was to afford the dairymen of the United States an opportunity to get better acquainted with the work being done for the benefit of the dairy industry by the Departments of Agriculture and Commerce.

Bureau Works on 200 Projects

Dr. C. W. Larson, chief of the Bureau of Dairy Industry, stated that the Bureau employs two hundred people and is doing research work on over 200 projects. The work is handled in five different divisions: breeding investigations, market milk investigations, dairy production manufacture and utilization, dairy research laboratories, and dairy publications and exhibits.

The first day was spent at the Dairy Bureau Experiment Station, Beltsville, Maryland. R. R. Graves, in charge of the division of breeding investigations explained the work being done in comparing in-breeding and out-breeding. A combination of blood lines of eight distinct Jersey families is being used.

Thru the continued use of proven sires it is hoped to develop animals whose inheritance will be pure for high production. Mr. Graves considered the continued use of proven sires the most important factor for improved production in dairy cattle. A cow may be a high producer, but may not transmit high production. One of the great economic wastes of the country is the failure to use for generation after generation sires that transmit high production.

It was formerly thought that breeding together related animals was more likely to fix inheritance for certain characteristics than in the case of those unrelated. The results, however, in the breeding investigations being conducted give evidence that relationship is of no great importance in fixing characteristics for high production. The more important factor is to mate animals that are pure in their inheritance for high production.

A two-year-old Holstein was shown that had produced 687 pounds of butterfat. This animal was the result of three generations of unrelated breeding, but all proven for production. Nearly all purebred bulls will increase the yield of a low-producing herd, but comparatively few bulls will increase the yield from a high producing herd.

The best bulls of the breed showed a substantial increase for their daughters as compared with average dams, but when mated with high-producing cows they scarcely maintained the level of production. If mated with low producers the bulls got daughters that are very much higher producers than their dams.

A similar comparison was made between dams and daughters of 154 bulls in another breed and here again the data showed that the average purebred bull very little more than maintains production. When mated with good cows his daughters are not as good as their dams, but when bred with low producing dams he increases the average production of the herd.

Daughters Surpass Average Dams

The twenty best bulls in this study were grouped together in order to find out what the really good bulls of the breed could do in increasing production. These best bulls made a substantial improvement in their daughters, each one producing on an average 1698 pounds of milk more than her dam during the year. Even when mated with high producing dams the sires made some improvement since each daughter excelled her dam by 842 pounds of milk. When bred with low-producing cows these bulls made a large gain in the production of their daughters, an increase being noted of 2702 pounds of milk for each as compared with the dams.

It is evident from the results of this study that the hopes of the dairy farmer for more efficient cows must be centered in good sires, preferably those that have been proved for production by the fact that their daughters are higher producers than their dams.

Editors' Note:—Mr. Borland will discuss more of the problems being studied at the Beltsville Farm in later issues.

Keeps Milk Sweet in Summer

This milk house on the farm of Harry H. Zimmerman, Lancaster County, Pa., is made of concrete blocks, has a concrete floor and drain and plenty of light. Running water is passing thru the cooling trough continually. With a place such as this the farmer can keep milk good and sweet and at a low temperature at all times.

Schuylkill C. T. A. Had 15 Honor Herds in First Year

Editors' Note.—This is one of a series of annual reports of Pennsylvania cow testing associations. As each association completes its fiscal year a summary of its records is published in this department. The owners of herds with a 300-pound butterfat average, whose names appear at the end of the report, will be awarded prize ribbons by the Pennsylvania Dairymen's Association at the 1928 State Farm Products Show.

THE Schuylkill County Cow Testing Association finished its first year April 1, 1927. There were 26 whole-year members in the association. There were 438 cows in the association during all or part of the year.

The results for the members are as follows:

Total average number of cows in the association..	369.78
Avge. per cow: lbs. of milk	8002
Pounds of butterfat	307.3
Percentage of butterfat ...	3.8
Value of product.........	$395.45
Cost of pasture	5.81
Cost of roughage	53.77
Cost of grain	71.02
Total cost of feed	130.60
Value of product above feed cost	264.85
Returns for $1 expended for feed	3.03

Following is a grouping of all cows producing over 300 pounds of butterfat during the year.

Above 500 lbs. butterfat, 3 cows; between 400 and 500 lbs. butterfat, 34 cows; between 300 and 400 lbs. butterfat, 123 cows.

Thirty-seven cows produced over 400 lbs. butterfat during the year.

Cow tester in charge, J. Clair Hindman; County Agent, W. L. Bollinger; summary compiled by I. O. Sidelmann.

Fifteen herds with an average average production of 390 pounds of butterfat. A complete list of these herds follows: of five or more cows exceeded an

How the State Serves the Farmer

(Continued from page 3)

One of the greatest problems is that of securing adequate labor for farms, particularly in an industrial state like New Jersey, where competent men are constantly sought for industrial operations. The Department of Labor of the state maintains an employment division, with specialists for registering farm workers and applications for such men. The extent of this service is shown by the fact that 2646 requests were received from farmers who needed farm labor in 1926, and during that year, 2307 men registered for farm employment. The state thus provides a service without charge to bring together employer and employe.

It became apparent to the people of the state 30 years ago that if the people of country and city were to have equal opportunity for education in their professional activities, as well as in culture and pleasure, some means must be established to provide the small town and rural districts with book and information service. For the aid of rural people, the New Jersey Public Library Commission lends books for study and serious reading to individuals who have no access to libraries; finds the best book upon a given subject; borrows books from the large libraries of this and other states for their use.

Books Travel to Farm Doors

In 1926 the Commission circulated nearly 1,000,000 books thru its 1219 traveling library stations and other agencies. County libraries under the supervision of competent librarians have been established in six rural counties. A library car makes a regular schedule of visits to each community within the county. It carries a wide choice of books. The county library headquarters are usually located in the county court house, where more than 230,000 books are kept to meet the needs of the county.

The Department of Banking and Insurance may seem, at first glance, to have little relationship with country life, yet it is this department that supervises the operation of community and small town building and loan associations, where local savings may be invested safely. No such association has become bankrupt since they were placed under the supervision of this department. This has created a feeling of confidence in local savings institutions and has made it possible for country people to secure local funds for the building of homes.

Health of State Safeguarded

The relationship of the Department of Health to rural welfare probably needs no amplification. This department acts thru and cooperates with local boards of health in towns and townships, and brings to rural people the best and latest information on the maintenance of public health and the control of epidemics. Child clinics are conducted in rural sections, to show parents safe methods of child rearing and the building of sturdy young bodies. This department looks after the purity of foods and drugs and, thru its inspectors, reaches every distributing center in the state.

Other activities might be listed but these cover some of the more important phases of the state's part in protecting the health, happiness and prosperity of its rural citizens.

It has become a matter of state pride to give to the inhabitants of the Commonwealth every possible opportunity for individual and community development, and as we now survey the work that has been done and that is under way, there comes the conviction that the state government is seriously attempting to meet the purpose of its existence, service to all its citizens.

~it SAVES the FARMER'S THRESH BILL

Getting Paid for Your Work

Two new books will help you—

How will you thresh your grain crop,—the crop you have worked to raise? You plowed, harrowed, sowed and harvested that crop yourself.

Why not do the threshing yourself and get all of your crop, clean, bright, merchantable grain threshed just the day it is ready? Your profit may depend on it.

A Fordson is all the power you need. Hyatt Roller Bearings, Alemite-Zerk Lubricated, have reduced the power required, so that any small farm tractor will handle the Red River Special 22x36 and save your grain.

Why pay out your threshing dollars year after year?

Put them where they will last—in a Red River Special, with all sheet metal parts now made with Armco Ingot Iron, the great rust-resisting metal.

Get a 22x36 for your farm this year or get your neighbors to go in with you on a 28x46—the neighborhood size. Thousands of other farmers have done it.

Two new books, "The Book of Successful Threshing" and "Another Great Advance in Threshing Machines" will give you all the information you need to work out this proposition. However you thresh they will be valuable. They are free to farmers who send the coupon.

"If—for any reason, the valve chamber on this Milker should be damaged, or get out of order, we will repair or replace it free of charge, during the life of the machine."

What THIS Guarantee Means

19 years ago, the first Hinman Milker carried the above guarantee.

From that day to this, *no Hinman owner has ever had to buy a new valve to replace the original one.*

THIS GUARANTEE MEANS

1. That from the start, the Hinman idea has been to sell *dependable, day-after-day machine milking*—not just a machine.
2. That the Hinman Valve, so simple it hasn't even a spring, *has* to be reliable or we couldn't afford to make that guarantee.
3. That of the two moving parts on the Hinman (aside from power) the only one that needs factory attention to adjust it, is protected by free service *as long as you operate a Hinman Milker.*

Think what that guarantee means! And then get *all* the facts. Find the other reasons why the Hinman is today "the milker most dairymen use."

Send for the Hinman Catalog. Write today.

HINMAN MILKING MACHINE CO.

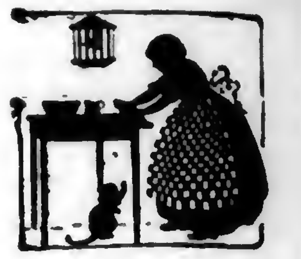
OUR HOME PAGE

Conducted by

Mrs. GERTRUDE S. STEWART



New Jersey Holds a Kitchen Tour

A LONG line of well-filled cars passed thru Mercer County, N. J., recently, bent on inspecting kitchens. The tour was held in relation to a contest featured by the Home Demonstration Agent. Ten kitchens were entered and four of them awarded prizes of kitchen equipment.

The first kitchen was small, used by a family of two, and it fairly shone with varnished linoleum, softened walls and plenty of window light. The artificial lighting was corrected by a 15-foot cord and a three-way socket costing 95 cents. Other features were: stove and table heights corrected by blocks the homemaker made herself; casters on the work table; a bench on top of step-ladder to make it high or low; a tea wagon made from a stand found in the attic, at a cost of $3.10 for wheels and varnish.

The Color Schemes Were Pleasing

The second kitchen was larger, but with splendid arrangement of equipment, and pleasing color scheme. The walls were a warm tan and the furniture, including refrigerator, Italian blue. Cans were painted a lighter blue to match the blue in the linoleum. Table and cabinet tops were covered with linoleum. The floor covering was waxed to insure long service. Spices and flavorings were arranged on a tray. A drain pipe in the floor took care of the water from the ice box.

The next kitchen was interesting as an ideal for those about to build. Its outstanding points were: hood over stove for ventilation; combination coal and gas range; ash bins direct to cellar; sweep-hole in base board so that all dust is swept in; dumb waiter.

The fourth kitchen had an interesting breakfast corner, without any extra room. Two long benches with a table between were placed along one end beneath a casement window. They were painted gray and blue to harmonize with walls and linoleum. On the table were blue and white oil cloth mats and cheery bright-colored salts and peppers.

Convenient Grouping Won Prize

The prize kitchen was warm and pleasing in color with tans and browns in the linoleum, walls and window trim and with a touch of blue on racks, fixtures and curtains to give a cool note. The stoves, coal and gas, were conveniently grouped between the electric refrigerator and the pantry, with a rack on the wall beside them for kettle covers. The pantry door, covered with oil cloth as a silencer, held cooking utensils. The lighting fixtures were central with a light over the sink. The scales were in sight on a convenient shelf.

The second prize kitchen was not visited, but from reports, it was not only convenient but very artistic. The stove of a soft green enamel, green and tan linoleum, tan walls, and all cans painted green and with pictures shellaced.—Edith R. Dilts, N. J.

Few housewives have not been bothered by ants and other insects at one time or another. Those who have trouble with these pests may be interested in a Cornell bulletin, H-134, on household insects and their control. It may be obtained from the State College at Ithaca, N. Y.

No More Digging in the Saw-dust for Summer Ice

ELECTRIC refrigeration is one of the newest conveniences developed for the home. It is designed to replace the iceman, and to supply a brand new service for those homes which have had to depend upon the cool cellar and the spring house for their refrigeration.

The requisites for the enjoyment of electric refrigeration are: A good ice-chest or refrigerator, electricity and the refrigerating mechanism, which commonly consists of a set of cooling coils that fit into the ordinary ice compartment of the refrigerator, and a condenser. Where the electric refrigerator is bought complete, in its own cabinet, this condenser or compressor probably will be placed in the base of the cabinet.

If it is intended to use the refrigerating mechanism with a refrigerator already owned in the home, the compressor may be installed in the basement. This makes a good place for it, altho any out-of-the-way space that is fairly accessible will be satisfactory.

Cost Compares Favorably with Ice

An important part of the mechanism is the refrigerating coil which may be compared to a cake of ice that never melts. The operation of the electric refrigerator is automatic and can be installed in one's own ice box for less than $200.

Refrigeration for the household should not be regarded primarily in the light of an investment. The actual operating cost will compare very favorably with the cost of ice on the average. In some homes it may run a little more, in others a little less.

Another delightful feature of the electric refrigerator is that it freezes its own ice, easily, in handy sized cubes, just right for cooling drinks or similar purposes. These ice cubes are frozen in trays that fit into the recesses inside the cooling coils themselves. Desserts, such as ices, ice creams and sherbets can also be frozen in these trays. They can be prepared some time in advance, if necessary, and kept in perfect condition until it is time to serve them.

Electric refrigeration is a new convenience, one of the boons that modern invention has brought to us. It is destined to be tremendously popular. When compared with the expense of other equipment which is becoming a part of the homemaker's outfit, its cost is not great, and its advantages and benefits are manifold.—A. J. St. John.

Good Time Promised

I HAVE just read a letter from Mrs. Bell, well known to all New Jersey farm women as the Home Management Specialist in Extension Service. She writes of a few good things already planned for Field Day at the New Jersey State College of Agriculture, New Brunswick, N. J., on June 15th. More to be announced later.

There will be a demonstration on Home Canning in the Extension Service Building—that is the cement building at the corner of Handy Street and Nichol Avenue. If you have ever seen the work of Miss Doermann, and heard her helpful teaching, you may form an estimate of just what this demonstration will offer the farm woman.

Another interesting feature of the day is the movie in the same building. This will show correct lighting in the home. And don't forget the luncheon time with all the readers of this page. We plan to carry our bites over to Room 36 of the Poultry Building, and have a little family chat. We think it will be a great help for us to become better acquainted. If you agree with us, and can possibly attend, let us send you a Pennsylvania Farmer Badge to wear so that we can locate each other at noon. Write early, asking for one for yourself and more for any women who may be going in your party. This is a trip when all motors should be well filled.—Gertrude S. Stewart.

Let's Have Eggs for Supper!

OF ALL the great variety of products from which the busy housewife can choose the evening meal, nothing has greater possibilities from the standpoint of easy preparation, economic efficiency and nutritive value than eggs.

Eggs usually are considered a breakfast dish. They are, however, coming to be used more and more as a main course for supper. Omelets, especially, are most attractive for the evening meal. Here are a few recipes which show how attractively and easily supper requirements may be met by using eggs:

FRENCH OMELET

[illegible]
[illegible] tablespoons milk
[illegible] teaspoon salt
[illegible] teaspoon pepper
[illegible] tablespoons fat

Beat eggs slightly, then add the milk and seasonings. Put fat in a hot omelet pan; when melted, pour in the egg mixture and cook slowly. As it cooks, stir with a fork until the whole is of a creamy consistency. Place on hotter part of stove to brown quickly underneath. Fold and turn on a hot platter. Before folding, grated cheese, chopped meat, jelly, etc., may be added.

• • •

FRENCH OMELET WITH SPANISH SAUCE

2 cups tomatoes
2 onions (chopped)
1 green pepper (sliced)
3 tablespoons fat
½ teaspoon salt
½ teaspoon sugar
⅛ teaspoon pepper

Melt fat, add other ingredients. Cook 10 minutes. Spread half the mixture over half the omelet, fold, place on platter and garnish with remainder of sauce.

• • •

FRENCH OMELET WITH ONION SAUCE

2 onions (chopped)
3 slices bacon (diced)
2 tablespoons flour
1 cup milk
½ teaspoon salt
⅛ teaspoon pepper

Brown the bacon slightly, add the onions and cook slowly 10 minutes. Now add the flour and seasonings; when blended, pour in the milk and cook until it thickens, stirring constantly. Place the folded omelet on a hot platter and garnish with the onion sauce.

A New Way to Serve a Familiar Dish

THE proper way to cook pork chops, that they may be best flavored and perfectly digestible, is to sear them quickly in hot fat in an iron frying pan. Then add boiling water to cover, salt and pepper, and let simmer for an hour. If one is serving a vegetable such as carrots, parsnips, or potatoes, they may be left whole or quartered length-wise, and placed in with the meat to simmer under a lid. The resulting flavor to the meat and vegetable is improved, and, as the water is simmered down, the valuable mineral salts of the vegetable are saved for the gravy.—Marion Cossitt Brackin, Pa.

Children should be taught to toe straight ahead. Toeing out weakens the ankles and the arches because it throws the weight of the body unevenly on the arch of the foot.

Timely Tips

OLD screens can be put to good use in the thrifty home. Not long ago we were bothered with mice in a desk drawer. While attempting to catch the pests we tried a worth while scheme of preventing the chewing of any more papers. We simply turned the desk over and tacked screen securely on the very bottom of the desk. This is wise with bureau drawers as well.

• • •

If you like to clean and brighten things up with paint, quite often you have a portion remaining for future use and it will not be as smooth as you wish. If you pour it thru an old piece of screen, 'twill be like new. Old screens help if you are mixing paints of different hues and perhaps thicknesses too. Just pour them thru an old screen and watch for smooth results and unusual colors.—Mary Stewart Shuman.

• • •

Put a parade of animal crackers on the next birthday cake by sticking them in the icing while it is still soft.

• • •

Piano keys should be washed with alcohol and a soft cloth or with clean, warm water without soap to prevent their turning yellow.

• • •

Cover unsightly places near the lawn with bulbs or shrubs. A small hill that cannot be farmed lies just above our lawn. Some kindly soul in years gone by planted daffodils, narcissus, a lilac bush, and roses there. There is also a raspberry patch. It is so much better than the burdock and jimpson that usually inhabit such places.—Florence C. Hebel, Pa.

• • •

Many boys beyond the blouse age find belts that hold up their trousers quite uncomfortable. Provide such lads with suspenders, and wear them under the shirt. Work a large buttonhole at each suspender strap place below the waistline of the shirt. The suspenders are slipped thru these buttonholes and fastened to buttons inside the waistband of the pants. Belts may be worn just for "looks."

Trees Share Our Memories

NEVER is a house quite a home until it has a tree or trees nearby. Never is a human life all it might have been until it has found comradeship in trees. That soul not aware of the grace and dignity of an elm, of the homeyness of a gnarled old apple, of the understanding murmur of the pine, has missed much of life.

How we love to recall the individual tree experiences of our childhood! Perhaps one reached its strong arms up to the windows of our room and helped us escape during an exciting game or prank. Trees share our secrets and our memories. Plant more trees.

Four or five growing maples would give a new lease of life to the fast shrinking spring. Place them near its head, and the cool waters will speak thanks. The roots of trees are like blotting-paper, holding and treasuring the moisture that would otherwise evaporate. Why not plant a catalpa, a cucumber tree, or a lovely mountain ash? The common sweet elder is a thing of beauty, too, and very desirable near the house for insects dislike it. It is commonly used as a hedge but can be trimmed and pruned into tree-like form. Plant more trees, for we are made better by friendships with them.—Mrs. M. C. Smith, Pa.

—my cakes never fail with the Perfection "live heat" oven

Color in Newest Perfections!
Gray porcelain enamel tops. Gray legs. Satin-black body finish. White enamel warming cabinets. Large white front ovens. —On newest Perfections, and *all* those with Superfex burners.

Golden-crusted and delicious! Cake makers are sure of good results when they use Perfection Ovens. "Live Heat"—clean, freshly heated air—circulates quickly around the baking. Then it's forced out, carrying excess moisture.

Only Perfection Ovens employ the "Live Heat" principle. Ten models, 1 and 2 burner sizes. Priced from $3.10 to $10.00. See them at any dealer's.

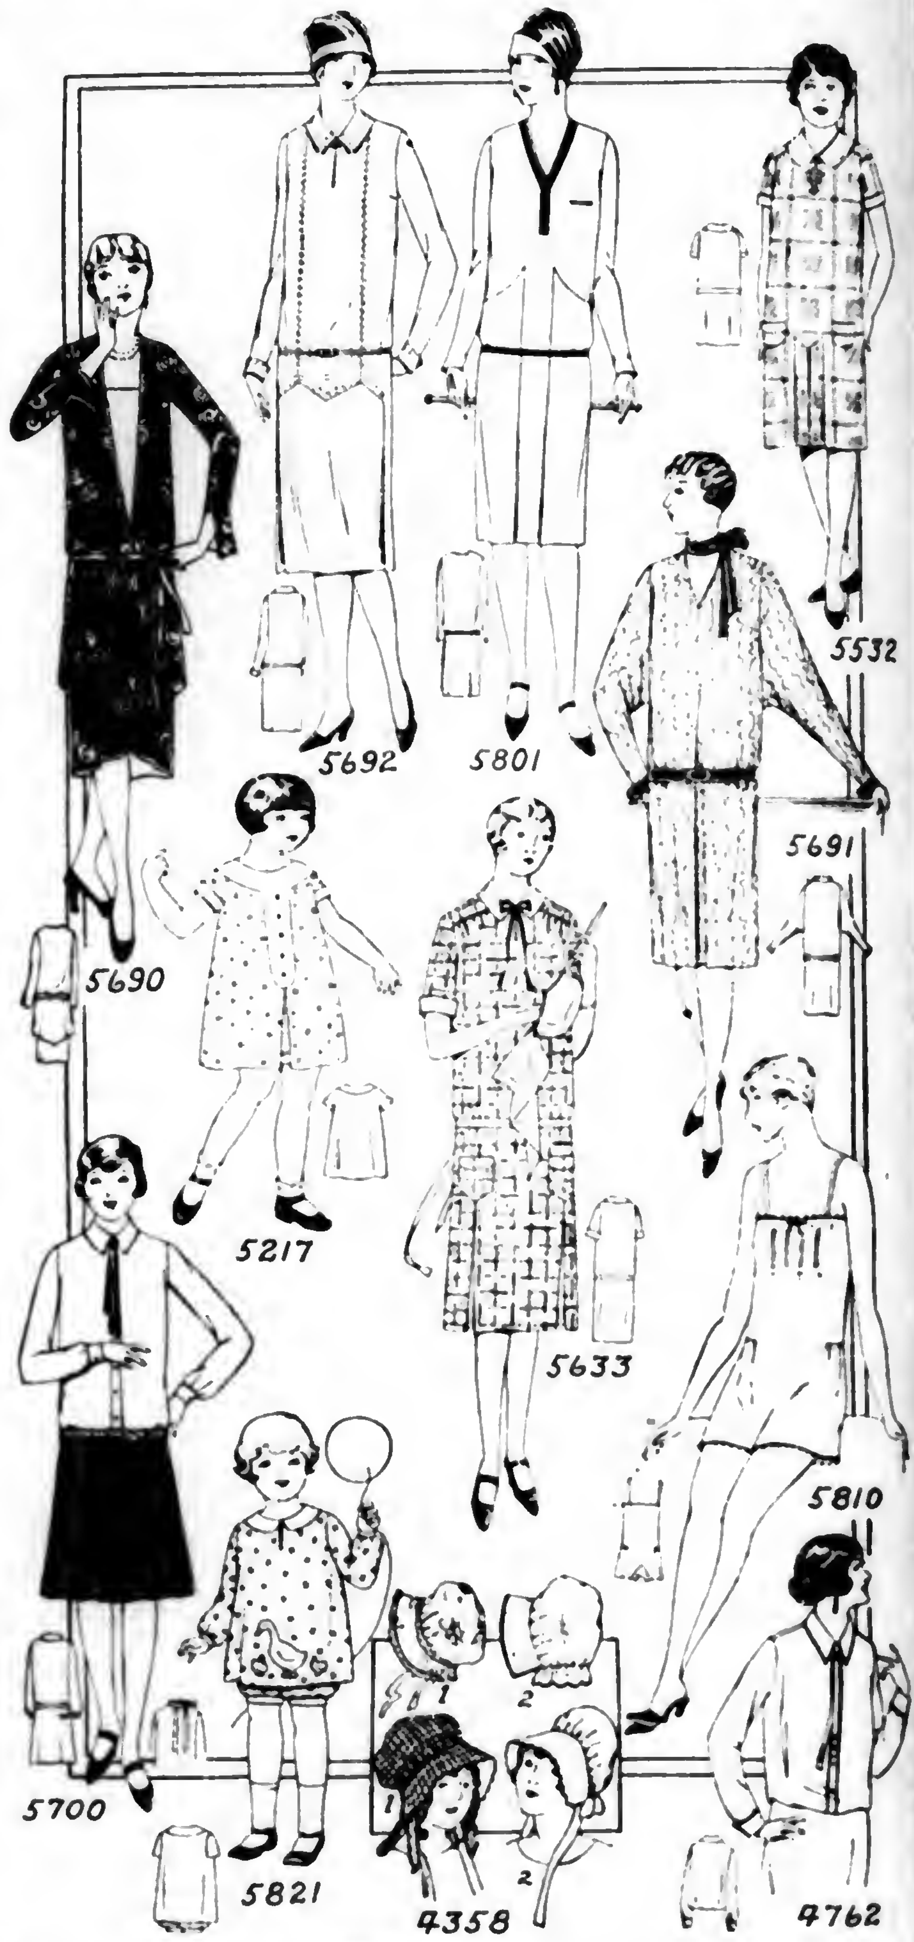
Some of Fashion's Favorites—

The Y Neck, the Kick Plait, the Tailored Blouse



Directions for Ordering.—Give figure or figures of each pattern exactly as printed at beginning of each description. Give bust measure when ordering waist patterns, waist measure for skirt, and age for children's patterns. Address Pennsylvania Farmer, 261 S. Third Street, Philadelphia, Pa.

5690.—Six sizes: 34, 36, 38, 40, 42 and 44 inches bust measure. A 38-inch size requires 4⅝ yards of 40-inch material with ¼ yard of contrasting material 18 inches wide for facing on the vestee. The width of the dress at the lower edge is 1½ yard. Price 10c.

5692.—Seven sizes: 34, 36, 38, 40, 42, 44 and 46 inches bust measure. A 38-inch size requires 3⅜ yards of 40-inch material. The width of the dress at the lower edge with plaits extended is 1⅝ yard. Price 10c.

5801.—Seven sizes: 34, 36, 38, 40, 42, 44 and 46 inches bust measure. A 38-inch size requires ⅝ yard of 27-inch lining, and 2⅞ yards of 40-inch material together with ¼ yard of contrasting material. The width at the lower edge of the dress with plaits extended is 1½ yard. Price 10c.

5532.—Four sizes: 6, 8, 10 and 12 years. A 12-year size requires 2¼ yards of 36-inch material with ⅝ yard of contrasting material. Price 10c.

5217.—Four sizes: 2, 4, 6 and 8 years. A 4-year size requires 1½ yard of 32-inch material with ⅜ yard of contrasting for yoke and cuff portions. Price 10c.

5633.—Six sizes: 34, 36, 38, 40, 42 and 44 inches bust measure. A 38-inch size requires 3⅜ yards of 40-inch material with ⅝ yard of contrasting material. The width of the dress at the lower edge is 1⅝ yard. Price 10c.

5691.—Seven sizes: 34, 36, 38, 40, 42, 44 and 46 inches bust measure. A 38-inch size requires 4 yards of 40-inch material with ⅜ yard of contrasting material. The width of the dress at the lower edge is 1⅝ yard. Price 10c.

5700.—Four sizes: 14, 16, 18 and 20 years. A 16-year size requires 1⅝ yard of 36-inch material for the blouse and 1⅛ yard for the skirt. The width of the skirt at the lower edge is 1½ yard. Price 10c.

5821.—Four sizes: 2, 3, 4 and 5 years. A 4-year size if made with long sleeves will require 2⅛ yards of 36-inch material together with ⅜ yard of contrasting material. If made with short sleeves ⅜ yard less will be required. Price 10c.

4358.—Very pleasing and becoming are the sun bonnets here shown. The pattern is cut in one size. It will require for No. 1, 1⅛ yard and for No. 2, 1⅜ yard of 36-inch material. Price 10c.

5810.—Four sizes: small, 34-36; medium, 38-40; large, 42-44; extra large, 46-48 inches bust measure. A medium size requires 1⅞ yard of 40-inch material. Shoulder straps of ribbon require 1 yard. To trim with edging as illustrated requires 3¼ yards. Price 10c.

4762.—Nine sizes: 32, 34, 36, 38, 40, 42, 44, 46 and 48 inches bust measure. For a 38-inch size 2¼ yards of 40-inch material is required. Price 10c.

Send 10c in silver or stamps for our up-to-date spring and summer 1927 Book of Fashions.

Friendly Talks

By EDGAR L. VINCENT

IT TAKES a pretty smart man to keep any of his flock of sheep in the pasture after one leads the lay over the fence or thru a hole to the other side where the grass is greener. Let one make its escape and away the rest go pell mell, till the last one is outside the bounds. How often we have said, "Might as well just stand still and let them go if the leader breaks out."

And that is a good deal the way with folks. Somebody leads and all the rest follow. Walking along a certain street at the state capital one day I saw a lot of men looking up toward the top of a tall building. Almost instinctively I found myself turning my gaze that way, too; and I saw away up there a man doing some work on the roof. And every moment the little company below grew larger and larger until it seemed as if everybody were just like me, anxious to see what was going on up there in the sky.

One Man's "Luck" Robbed Many

And it is so in many other ways. It has been a great many years now since what was known as the Louisiana lottery was compelled by federal edict to go out of business; but I remember that some one in our neighborhood had the bad luck to draw a prize, and that set the whole neighborhood wild. Not only the lucky, or perhaps I had better say the unlucky man, but everybody in the community that could buy a ticket did so; but never another single dollar ever came to any of our deluded people as a prize in that lottery.

A well-dressed young man sold a poor farmer's wife a small bit of stock, and gave her a little blank book with her name in gold on the cover, in which to note her future investments. How many other farmers and farmers' wives were caught by that little book with the gilt on the cover no one knows; but every dollar of all they put into the scheme was lost forever.

But this works in other and better things than this. There is something about the life of a good man or good woman that leads people to think, "I wish I could be a good man, too. I'll try it!" One man with real patriotic fervor in his heart may, by a single address, sweep hundreds off their feet and make them ready to do and to dare for their country.

Peace Needs a Strong Leader

Today we hear the word peace among the nations perhaps as often as we do any one expression; and we all love peace; but somehow peace is slow in coming. Is it not because we lack good, strong leadership? If only some man of outstanding strength of character would show us the way to true peace, how long would it be before such a tide would set that way that nothing could withstand it.

But in our own neighborhood we can be leaders, not only for peace but for right living in every line of action. "But," you say, "I am no leader. Nobody would follow me, if I were ever so good a man." Try it and see! The world is hungry for better things. Yes, it is fairly starving. And where are the leaders to show the way to a better state of things?

The call is great, and it is to every one of us. That is one of life's grandest privileges—no one is shut out from being a good man. And somebody, if we are truly trying to lead a right life will surely "see our good works and glorify thy Father which is in heaven."

THE RED STAR OIL STOVE BURNS OIL OR GASOLINE

Cooks as fast as gas

This is the famous "Lively Heat" Burner that burns oil or gasoline with equally good results

"The most wonderful baker I ever used"
—says Mrs. R. Snow, Barron, Wisconsin

Dear Sirs: "I surely enjoy my Red Star Oil Stove. It burns gasoline or kerosene. Nothing ever wears out on it. The wonderful wickless 'Lively Heat' burners are exceedingly easy to keep clean.

"I light the burner and begin to cook or bake at once; with this intensely hot fire, it is no trick to fry good steak and bake angel food cake and cookies.

"We heat water for clothes and bathing and find the Red Star very economical."
(*Signed*) MRS. R. SNOW.

Thousands of women, like Mrs. Snow; find that the Red Star Oil Stove with its wonderful "Lively Heat" burners lightens housework and cooks beautifully and economically.

Go to your nearest Red Star dealer. See a demonstration and be convinced. Made in two to six burner sizes and at a price for every purse. Smaller sizes cost no more than the ordinary oil stoves. Most dealers sell on easy terms. If your dealer is not listed below, write us at once and we will send you a nearby dealer's name and the interesting Red Star Book, *free.*

Important To Employers!

The Workmen's Compensation Act became effective Jan 1, 1915, but it seems some employers ignore their obligations, intentionally or through misunderstanding. Failure to provide protection to employes makes the employer liable to a heavy fine in addition to the paying of benefits in accordance with the Compensation schedule.

Our Policy furnishes complete protection as required by the Compensation Act, and if the employer wishes, we can protect him against accident, while engaged in his work, or at all times during the day and night.

Our policyholders are receiving a large return premium each year. (17½% was returned to them in 1924 and 1925) when their premiums were above the minimum.

OUR YOUNG PEOPLE'S FORUM.

Letters From Forum Members and Friends

Dear Cousin Ruth:—On the last day of school we had a picnic. We all took a big box or a basket filled with good eats and our teacher hired a touring car and took us to Camp Wildwood, situated along Penns Creek, for a picnic. We had a fine time.—Marion L. Shaffer, (X), Union County, Pa.

Dear Forum Friends:—This year I am in the seventh grade and am trying very hard to get ready for the eighth grade next year. The boys of our school have played baseball against Shiloh. The score of the first game was 12 to 9 in favor of Shiloh, the second was 8 to 6 in favor of Buttonwood, so it isn't so bad after all. Some of the high school boys played on Shiloh's team against Buttonwood's grade boys.—Sara Davis, (X), Cumberland County, N. J.

Dear Cousin Ruth and Forum Friends:—I wish some of you Forum friends could spend your summer vacation with me. I mean you, Cousin Ruth, also.

We have a little lake of our own. Our dad got us a boat and in the summer we go boating and swimming. We also enjoy skating in winter. There are fish in our lake such as catfish, pickerel, perch, suckers and sunfish.

It's nice to have a lake or pond where one can go fishing and swimming, but I like horseback riding the best.

There are so many things that I find to enjoy on a farm and I know the rest of the farm boys and girls enjoy a lot, too.—Doris York, (X), Lackawanna County, Pa.

Dear Cousin Ruth and Forum Friends:—We have been living on a fruit farm for the last three years. It is lovely to see the fruit trees coming in blossom. I help to pick up brush, thin out peaches and last, but not least, help to pick the peaches. The best part is to sample the fruit.

We are all anxious for Pennsylvania Farmer magazine each week. It is a help and pleasure for every one of the family.

I am sending a picture of my girl friend and myself.—Grace Hayes, thirteen (X), Berks County, Pa.

I'M ON THE LEFT
Grace Hayes, (X), Berks County, Pa.

Dear Cousin Ruth and Forum Friends:—Our school left out April 28th. We had a very nice time the last day. The children of Churchtown and of Elverson came to the school where I go which is at Morgantown. We had contests of arithmetic, spelling, silent reading, general information, declamation and art. We also had an art display. Also a sewing display by the other schools. I ranked very good in the art display. The other schools brought some very nice sewing.—Sadie K. Beiler, eleven (X), Chester County, Pa.

Dear Cousin Ruth and Forum Friends:—Our school is over. I haven't missed any school for seven years. I haven't missed any since I have been going to school. I have five seals and two certificates. I can play the piano but I don't take music lessons.—Cora Holtry, fourteen (X), Franklin County, Pa.

Dear Cousin Ruth:—I am going to write you a few lines about my little nephew.

He lives in Chicago and is about 1½ years old. His name is Robert Howe. He has hazel eyes and light hair. He and his father and mother came home for Christmas. He can walk and say a few words.

When he was home for Christmas he had so many things to play with he didn't know which one to play with. We took him out for a sledride every morning.

WHEN ROBERT WAS 15 MONTHS OLD
Sarah Howe, (X), Mifflin County, Pa.

Enclosed you will find a picture of him when he was 15 months old.—Sarah Howe, thirteen (X), Mifflin County, Pa.

Dear Cousin Ruth:—I have just gotten over the chickenpox. Now I have to go to the doctor's. I may have to go to the hospital for an operation.

I am in the sixth grade. There are children from different schools that come here as their school is closed. They come because it is a four-year high school.

We had a writing and spelling contest up here. I took the writing contest and hope I get a diploma.—Frances Wright, Wayne County, Pa.

Dear Cousin Ruth:—We raise strawberries, apples, pears, peaches and cherries. We are going to get 400 little peeps sometime this month.

I wish you would come to see me me in the summer. Come to see me if you can.—Jessie Clowser, fourteen, Armstrong County, Pa.

I'd like to come see you, Jessie, but I'm afraid work in the office will keep me busy this summer. Thanks for inviting me.

COUSIN RUTH

Dear Cousin Ruth:—I received your Forum pin and thank you very much. We sure do have a jolly time at school. Cousin Ruth, I wish you could have been with us when we went sledding. We had a very nice time when the snow was on the ground.

WE HAVE SUCH JOLLY TIMES AT SCHOOL
Phyllis Jean States, (X), Huntingdon County, Pa.

We have only thirteen scholars in our school. We did have eighteen but one family moved out and now we have only thirteen. I am sending a picture of our school.

We have five horses and eleven cows. My little brother can walk and I have to watch him while mother helps milk the cows in the evening. My mother and grandmother made a quilt last week.—Phyllis Jean States, (X), Huntingdon County, Pa.

Dear Cousin Ruth:—It is raining this morning. We live on a farm about a mile and a half from the schoolhouse across the fields. I have gone to school two years now without missing a day or being tardy.

Thanks for the membership pin and for my prize mouth organ that I received yesterday. It is a very fine one. I want to learn to play on it well. I got my words for the contest from the small dictionary at home and my sister, Esther, got hers from the big dictionary at school.

Papa has about 500 Rhode Island Red chicks. He hatched them all in two small incubators.—Ralph Bell, twelve, (X), Greene County, Pa.

Dear Cousin Ruth and Forum Friends:—I received my membership pin and everybody thinks it is nice. Thanks for it. I am sorry I could not enter the "Around My Home" contest but we were cleaning house and in the evenings I was tired and wanted to go to bed.

I live near the head of Falling Spring and my oldest brother lives on the farm where the spring rises. They call it Falling Spring but it does not have any falls and rises out of the ground under a large rock where many years ago men dug for gold.

I have twelve Barred Plymouth Rock hens and one rooster but two of the hens are hatching. One day last week I got ten eggs from the ten hens.

I have an old sheep that had triplet lambs. One was much smaller and it died but the other two are doing fine.—Mary Lesher, (X), Franklin County, Pa.

Dear Forum Friends:—I have gone to my place where I am hired but am home now because I sprained my ankle and cannot use my foot. At the place I work they are putting out two acres of potatoes. They are planting them with a potato planter.—Mervin F. Burkholder, (X), Franklin County, Pa.

OUR LITTLE FOLKS' PUZZLE CORNER

DEAR LITTLE FOLKS:—I'm thinking of ten words. Can you guess what they are? The list of definitions below will give you some idea what the words mean, and I can tell you this much. All the words begin with the same letter, and that letter is the first letter in the names of three months in the year. Think that over and you will know what the first letter of each of these words must be. When you have found what the words are, just make a list of them, numbering them as I have numbered the definitions, and let me have them by June 11th. BE SURE TO SAY HOW OLD YOU ARE, WHEN YOUR BIRTHDAY COMES AND THE NAME OF THE COUNTY IN WHICH YOU LIVE. The prizes go to the ten children, sending in the correct answer, whose cards are the best in grammar, spelling, punctuation, penmanship and general appearance. Address all puzzle answers to The Puzzle Editor, Pennsylvania Farmer, 261 South Third Street, Philadelphia, Pa.

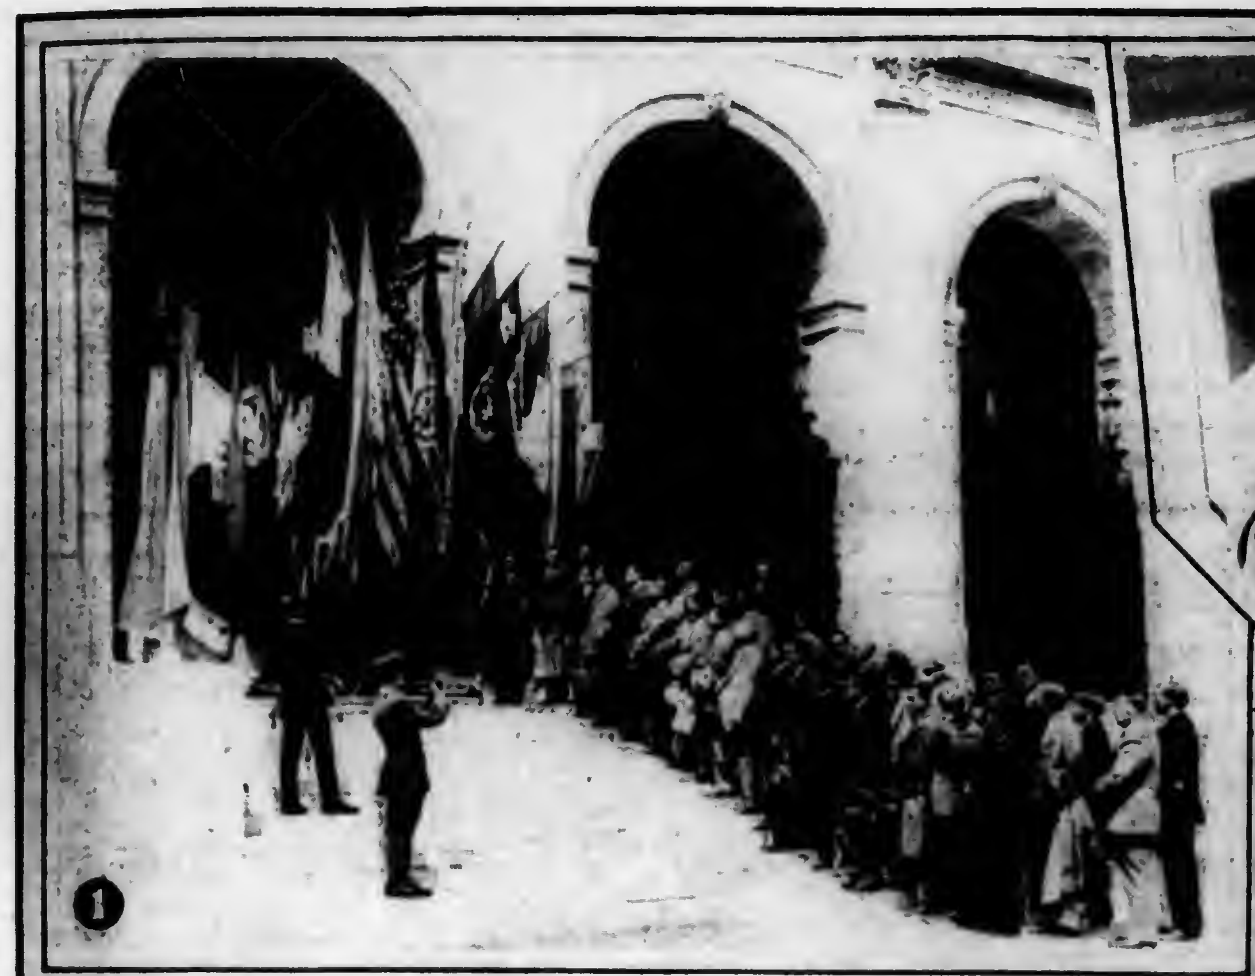
WHAT DO YOU GUESS!

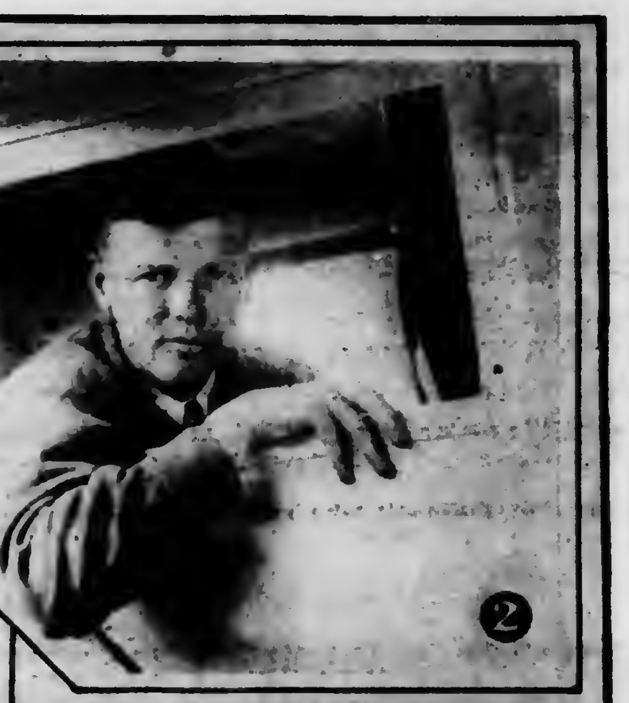
1. The Bible says the whale swallowed him. (5 letters)
2. To fasten together. (4 letters)
3. Something sweet. (5 letters)
4. Something else sweet. (3 letters)
5. A kind of prison. (4 letters)
6. To leap. (4 letters)
7. A bird. (3 letters)
8. Happiness. (3 letters)
9. Part of the name of a state near Pennsylvania. (6 letters)
10. A precious stone. (5 letters)

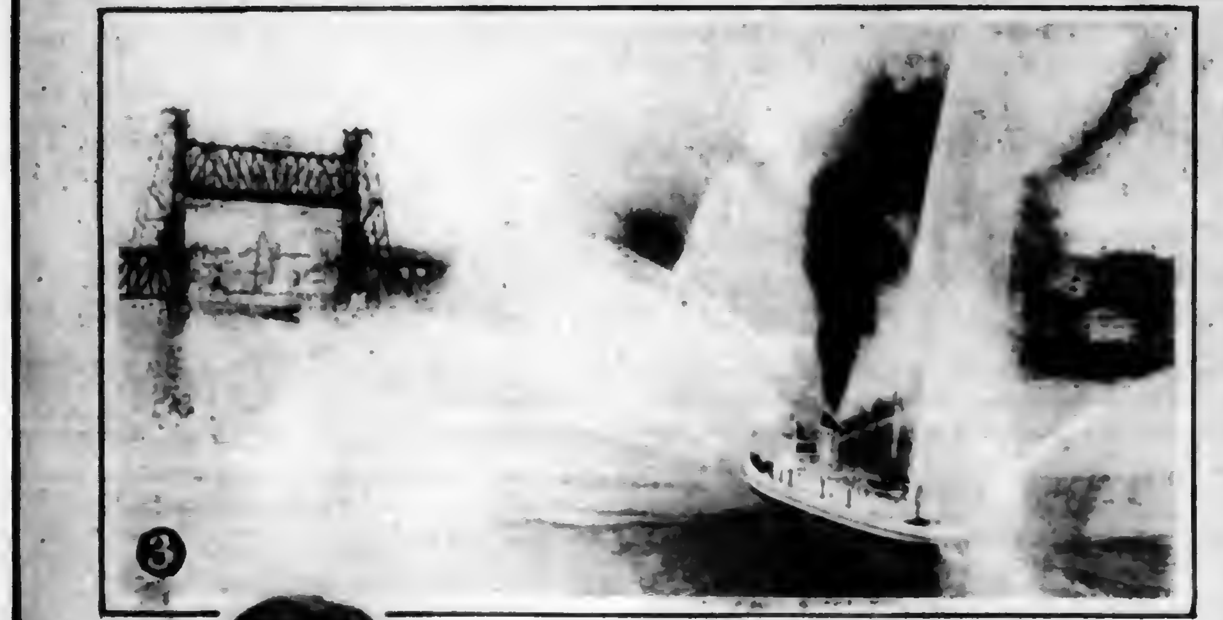
The answer to the puzzle in the May 14th issue (the puzzle of the missing letters) is: IT IS BETTER TO LAUGH THAN TO CRY. And I am sure the ten Little Folks, whose names follow, will be glad that they are the prize winners. So many of you did so very well that I wish we could have given more prizes this week.

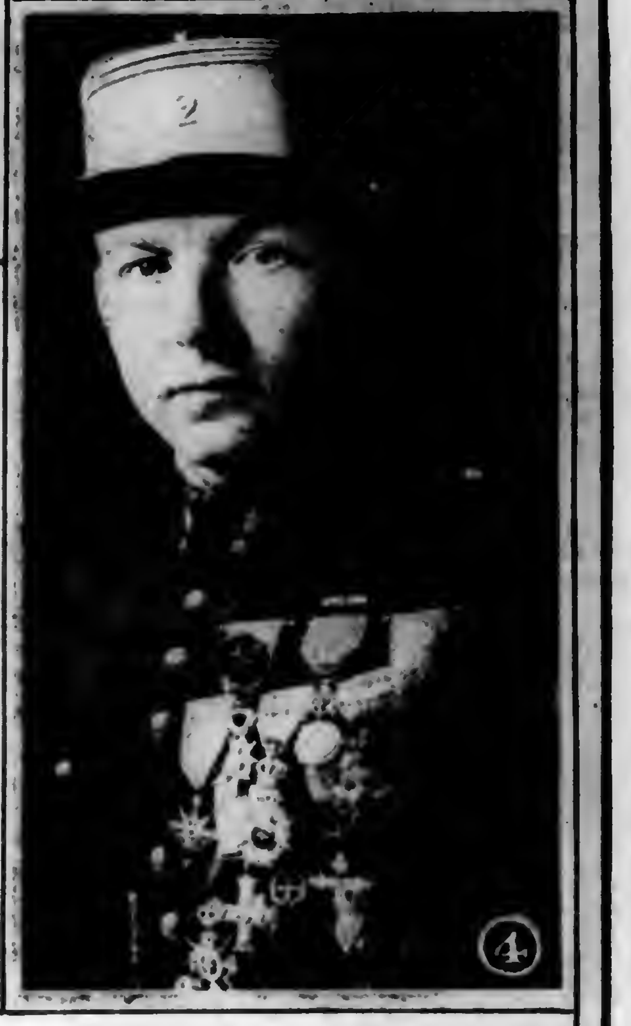
The prize winners are: Mabel Bachman, age 8, Jacksonville, Pa.; William R. Cobick, age 11, Newville, Pa.; Evelyn Cramer, age 12, Frederick, Md.; Edward George, age 11, Cochrantown, Pa.; Hazel Hoagland, age 9, Bedford, Pa.; Caroline Kayser, age 7, Robesonia, Pa.; Violet P. March, age 11, Elizabeth, Pa.; Weaver Martin, age 12, East Earl, Pa.; Eleanore Rimp, age 12, Butler, Pa.; Earl S. Thoman, age 10, Brodbecks, Pa.

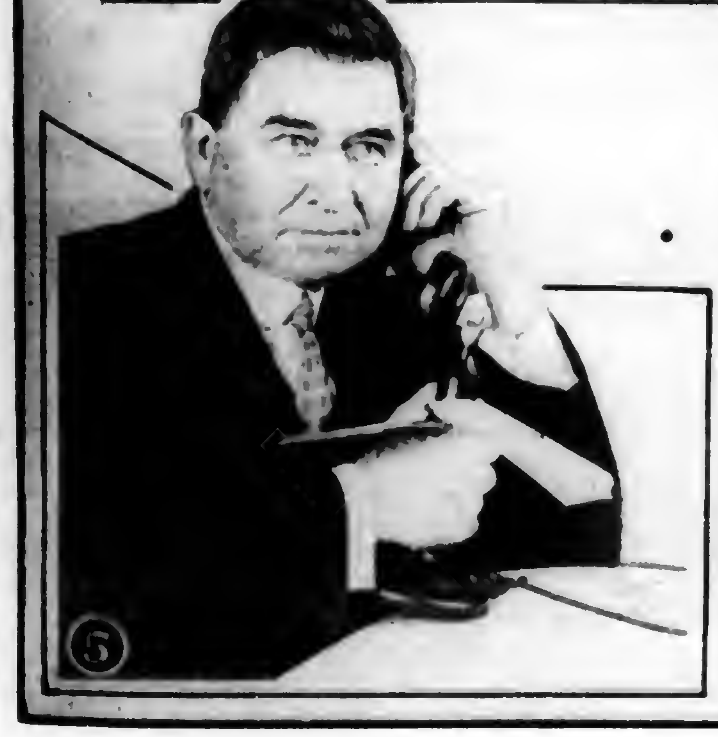
PASSING EVENTS IN PICTURES

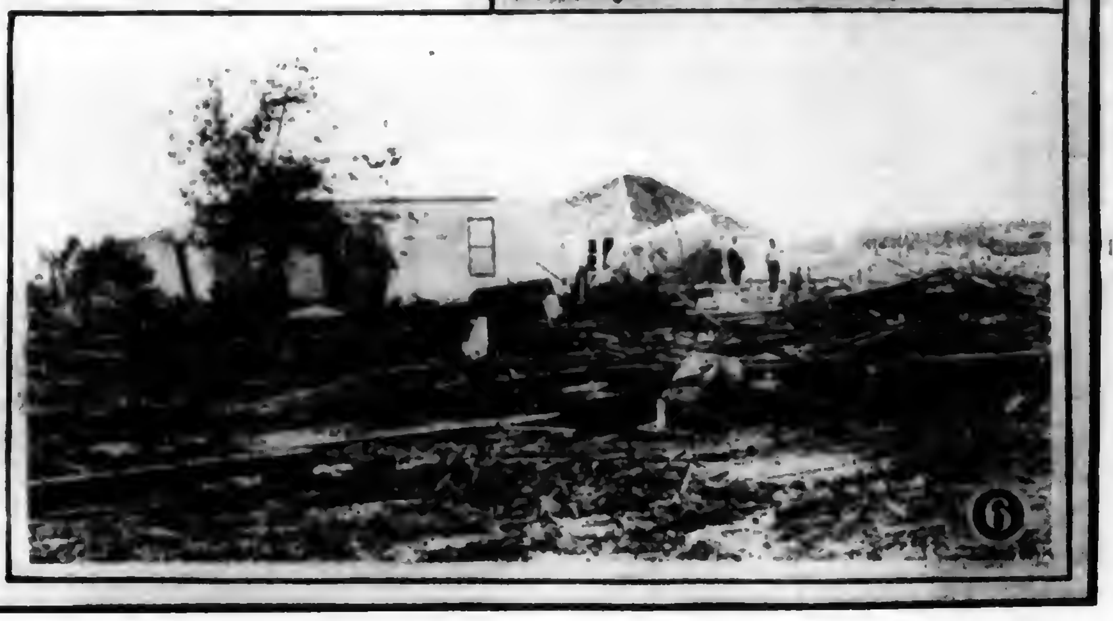












(Copyright by Underwood and Underwood)

1.—Just before starting on a tour of the United States, a group of delegates to the Pan-American Commercial Conference gathered on the steps of the Pan-American Union for a "Salute to the Colors" of twenty-one American republics.

2.—Captain Charles A. Lindbergh, the daring 25-year-old air mail pilot who made the first non-stop flight from New York to Paris alone on May 20-21st.

3.—A new fire boat demonstrating its effectiveness in the harbor of Portland, Oregon. The lift bridge in the background spans the Williamette River.

4.—The French ace, Captain Charles Nungesser, who with Captain Francois Coli was lost in attempting the Paris-New York non-stop flight in the "White Bird."

5.—And here is the weather man, Mr. James H. Scarr, head of the New York bureau, telephoning to Curtiss Field to inform the trans-Atlantic flyers of weather conditions along their route.

6.—The tornado which swept thru eight mid-west states recently, killing over 200 and destroying property worth millions, razed this house at Garland, Texas.

The Captain of Troop A

By Katherine Mayo

COPYRIGHT 1918 BY KATHERINE MAYO

Continued from last week

"SO NOW, as soon as the shops open, we can hunt for a place where they sell non-trade-marked dynamite, and where some one has bought this approximate amount of stuff, and paid cash for it. My belief is that the clerk who sold the things and who made this calculation in these smart little figures, here, will remember his customer pretty well.

"Moore," the Captain ran on, "it was a most providential thing that this Mr. Hill should have turned up by the Burr garden at that time of night, wasn't it! From what I learned he was a long way off his normal line of travel between his home and the place where he spent his evening. It was providential, wasn't it?"

"Most assuredly."

"But, Moore, he didn't show judgment in going in, himself, after the skulker in the bushes, did he? At his age one would think that caution and common sense both, would have sent him after a policeman."

"H'm-m—the blood spot—"

"Exactly," said the Captain. "Now we're just in time to get a shave and breakfast before the shops open their doors."

A LITTLE inquiry among the city's dealers revealed that one of the prominent companies made a special type of dynamite—a grade inferior to its standard—on which it did not set its trade-mark. Immediately the Captain proceeded to the store of that company's agent.

"Do you people make a grade of dynamite on which they put no brand?" he asked of the proprietor, introducing himself officially.

"Yes, sir."

"Do you handle it here?"

"We do."

"Do you recognize these as your product?" The Captain laid his six sticks on the dealer's desk.

"Certainly. That is our own make. And, moreover, I am the only merchant in the city who deals in it."

"I would like, then, to see all your salesmen of that department."

"Which," said the dealer, "will not be difficult. I have only two who handle dynamite."

He pressed the call-button on his desk.

"Send in Mr. Blake," he directed the boy who answered the call.

In a moment the door of the private office again opened and a young man stood on the threshold.

"Come in, Mr. Blake. Now, Captain, ask whatever you like and Mr. Blake will answer to the best of his power."

"Thank you," said the Captain.

Next Week

It was two State Troopers against a swarming, drunken mob of negroes and foreigners. But Sergeant Jacobs and Private Gjertsen carried their prisoner away to jail, and they took the leader of the mob with him. That was the beginning of the clean-up of Cherry Valley.

The story of Cherry Valley will appear in these columns next week. It is another true narrative of the Pennsylvania State Police.

"Mr. Blake, will you look at the figures pencilled on this piece of paper and tell me if you made them?"

The clerk, taking the crumpled sheet of brown manila from the officer's hand, held it close to his near-sighted eyes.

"Why, no. They ain't mine. But they are Bill's. There's Bill's mark." And he pointed to a tiny scratch below the calculation.

"Thank you, Mr. Blake. I would like to see Bill."

Bill, a dry, methodical-looking youth with a bright green necktie and ashen hair, came alacritously, more than willing to take a taste of whatever news was afoot.

"Sure, those are my figures," said he, "and there's my mark. See? I put that on everything."

"Can you recall what transaction they represent?"

"Yes. I remember all about it. There was a man come in yesterday afternoon and got six sticks of dynamite—he wanted the second grade—and this many caps, and this worth of fuse. And here"—as he talked Hill eagerly pointed with his well-sharpened pencil—"here is the denomination of the bill he give me to pay for the lot. And here's the addition, the subtraction, and the change. See? And the man, he took the stuff—I wrapped it all up in this here brown paper that I done the figuring on—and he went away."

"Did you know the man?"

"Never saw him before, Captain."

"Can you remember how he looked?"

"Just as well as if he stood here. I never forget people's looks."

"Let's have his description, then."

Bill, nothing loath to prove his boast, launched into a careful portrait of his customer. As he finished, the Captain looked at his watch. He had just time to catch the next train, picking up Sergeant Moore on his way.

As the two men detrained at their destination the clock in the tower at the Borough Hall struck eleven.

"I shan't need over five minutes with him, probably. Follow me slowly, Sergeant," the Captain said, as he started away in his long stride. In another five minutes he stood in the little office of a plumber's supply shop, face to face with Mr. Hill.

"I've just dropped in for a moment," he was saying, "knowing how much you would be interested in the progress of the bomb case. I have a very hot clue, very."

"Have you, indeed! I congratulate you. That is quick work, sir."

THE old man withdrew his thin heavily veined hand from the edge of his desk. It was trembling noticeably.

"I knew you would be keen to hear, of course,—after your remarkable share in the affair. And by the way, Mr. Hill,"—the Captain's manner was absolutely simple and courteous,—"may I ask you a few minor questions? Did you ever handle dynamite?"

"No. I have never used it at all."

"Do you know anything about dynamite?"

"Nothing."

"No. The reason I ask you is that I want to call your attention to the fact that the detonator should be set so—here—and not so." The Captain was sketching rapid diagrams on the back of an envelope. "Just take your lead-pencil, open the stick so—run it down so—then close the dynamite around the fuse—and then it will be sure to go off. The other way is quite uncertain. Well, I must be getting along. This is a busy day. Good-morning, Mr. Hill."

The Captain, stepping out into the shop, closed the office door behind him; then, in a moment, he opened it again. The old man still stood as he had risen to say good-bye. His face was ashen.

"Mr. Hill, I want to reassure you absolutely. I am going to get the fellow that planted the bomb on the lawn, just as certainly as you and I are standing here. The evidence now in my possession will bring him, as sure as you live. I don't care who did it, I shall have him before ten o'clock tonight. Good-bye again."

THE next errand of the Captain of "A" Troop took him to the office of Dr. Hill, where, in a friendly talk, he learned the essential details of Mr. Hill's history. Thence he proceeded to the Burgess.

"Burgess," said he to that astonished official, "I now know who planted the bomb last night on Mr. Burr's lawn. I want you to come down to Mr. Burr's office just as soon as you can and he can arrange a meeting there. I will produce the man."

"Let me call A. C. I'll bet he won't delay the game as far as he's concerned!" exclaimed the Burgess, red with excitement. "By George, this sounds good to me! . . . Mr. Burr's office? Tell Mr. Burr the Burgess wants to speak to him. . . . Oh—Mr. Burr! We think we have the man. I want to see you at your office as soon as possible. We'll produce him. When? One o'clock? All right, we'll be there."

The Burgess swung away from the telephone, elation in his face. "By George!" he exclaimed again. "I wouldn't have believed such luck possible."

Then, as he finished the phrase, something about it seemed to dissatisfy him. He took off his desk-glasses to look the Captain the more clearly in the eyes.

"Maybe," he ventured, "there's no such thing as luck. Don't know as I believe there is. Anyway, we've just got time for a bite of lunch. Come along with me."

"Thank you," said the Captain—"but first perhaps you'd better call up Dr. Hill. He must be present at the conference."

"All right," agreed the Burgess, and proceeded to insure the arrangement.

On their way out Captain Adams conveyed his order to the Sergeant: "Bring your man to Mr. Burr's office at quarter after one."

At one o'clock the great manufacturer whose home had been so direfully menaced only thirteen hours before, the Burgess, the doctor and the Captain of State Police, met in the private office of the first. It was a luxurious office. Heavy rugs, leather lounging-chairs, and a big mirror on the wall, flanked by heads of game, gave it the air of a comfortable little room in a club.

"Gentlemen," said the Captain, as they all settled down to the business that had brought them together, "I have to tell you simply that the person who placed the bomb on Mr. Burr's lawn is the man who first reported its presence there—Mr. Hill."

The doctor was out of his chair in a flash. "What? Impossible! Outrageous! I won't listen to this!"

"Wait, doctor, wait!" the magnate suppressed his guest. "The Captain must state his case."

THE Captain rehearsed the original narrative related by Mr. Hill. "In this, gentlemen, I ask you to observe," he went on, "first, that Mr. Hill, an elderly man of regular habits leaving his shop shortly before midnight to return to his home, was taking a strangely circuitous route when he went by way of Mr. Burr's street. Second, his conduct in following a supposed suspicious character into Mr. Burr's garden was as unusual as unwise. Third, according to Mr. Hill's statement, the first shot of his assailant, aimed at his head, passed straight thru his hat. Now he exhibited that hat to me at the Burgess's house this morning. It is a soft, low hat. There are two bullet holes thru it. The powder-mark remains on the inside But Mr. Hill's hair and scalp were not in the slightest degree scorched. Fourth, Mr. Hill's statement leaves no room for him to have touched the bomb after he was shot in the hand. But the bomb, when I saw it in the Burgess's office, had a spot of fresh blood upon it."

The Captain then narrated his gleanings as to the purchases in the dynamite company's agency, concluding:

"I will now produce Mr. Hill. Doctor, of you I must ask that you keep absolutely quiet. Mr. Hill, I believe, will confess. Mr. Burr, Mr. Hill is now in your outer office, in charge of one of my men. I will have him brought in."

"Oh, I'll keep still," said the doctor, "but I tell you my cousin no more did this thing than you did it yourself. It's monstrous—inconceivable!"

THE door opened. Sergeant Moore stood on the threshold followed by Hill. The Sergeant, in bringing him hither, had represented himself merely as a messenger, not as an officer of the State. The old man, therefore, had no realization whatever of being under constraint. His manner was one of suppressed excitement, and a sort of child's expectancy lighted his patient, melancholy face. His eyes rested eagerly on Mr. Burr. The Captain spoke first.

"Well, Mr. Hill, I have the man."

"Have you?" he looked quickly around the room.

"I have him beyond escape. Do you know, that rascal actually imagined I was going to go all over the country looking for a Greek, because his bomb was wrapped in a Greek newspaper. Fancy that!"

"I thought he was a Greek."

"He was not a Greek, he was not an Italian. Would you like to see who he was?"

"Yes."

Gently the Captain took him by the arm and led him before the big mirror. "Do you recognize him?"

With a moaning cry the old man covered his face with his hands.

"You put that dynamite on the lawn," the officer pursued, in the same firm, even tone.

Hill steadied himself, leaning against a table, groping pitifully for strength to speak.

"I have been thinking," he stammered at last, with quivering lips,—"I have been thinking it over. I want to tell you my trouble—I—I don't know that I need annoy all these gentlemen here—perhaps I could talk to you alone, Captain?"

"I desire to hear this thing thru," the magnate interposed, and his voice was hard.

The old man shrank as tho from a blow in the face.

"Sit down, Mr. Hill," said the Captain of State Police, and led him to a chair.

"Ten years ago," he began, in a husky voice, "I was employed by a large ice company in a responsible position. One day it happened that I walked into one of our storage houses just in time to see the end of a fight. Two Greek laborers had been bitterly quarrelling. They had gone into that ice house to fight it out in secret. One stabbed the other, killing him. And, just as the blow fell, I opened the door. There was no one else there—no other witness. When the murderer saw me, he sprang for me and pulled me inside.

"'If you ever dare to tell, I will swear I saw you kill him!' he said, and he shook his bloody knife.

"Now, it chanced by my great misfortune that I had had a dispute with the man that lay dead. Every one knew that. And I thought that if I were accused of his murder, it would be believed against me. I was afraid. So from that time I have been in the Greek's power. He has made me do everything."

"What has he made you do?" Captain Adams asked quietly.

"HE HAS made me give him money. He has driven me from one job to another. Finally last night, he came to me in my store and said I must go with him. He led me to Mr. Burr's place, telling me nothing. When he got there, he took me in, thru the shrubs, and gave me the bomb to place.

"I was forced to obey him. The Greek would have killed me if I refused. I was afraid that even if I protested he would turn around and kill me right there. But when we actually got to the point, I thought of Mr. Burr and his house and his family, and I just could not do it.

"We had a fight, right there on the lawn—and after he shot me he ran away. Then I ran to the police, hoping they would catch him But I did not dare to tell about the Greek himself, because I knew that if I told, and they didn't catch him, but only raised a vain hue and cry, he would certainly know and take revenge on me."

The old man stopped, exhausted, his breath coming heavily. He was clasping his hands so tight that the knuckles shone yellow thru the stretched skin.

"Mr. Hill," said the Captain gravely, "you missed your calling. You should have written books. Now I will tell you a story:

"Your business has not been going any too well of late. You have not been making any too much money. You have been worried. One day, as you were passing Mr. Burr's residence, this came into your mind:

"'If I could get a steady job, employed in Mr. Burr's plant, I should be pretty well fixed for the rest of my life.'

"You didn't know how to get the job, and your imagination again said to you:

"'Now, if I saw a man trying to blow up this house,—if I saw anybody doing that,—I would just grapple with him and stop him, and that would gain Mr. Burr's gratitude. Then, if I asked for it, Mr. Burr would probably give me a position, and I would be out of fear of need forever after—I would be safe.'

"Wishing that somebody, by happy chance, would give you the opportunity, you walked on, slowly, past the house. But nobody appeared. Nobody tried to blow the place up.

"Next you thought: 'Why can't I stage something like that?'

"THE more you dwelt on the idea, the more feasible it seemed. Finally, you actually went to the city, to the dynamite company's agency, and bought six sticks of dynamite, three primers, three fuses. That was yesterday. Then, last evening, you made up the bomb.

"For the rest, you held your hat before you while you fired a revolver shot thru it. And next, you carefully placed your revolver against the palm of your hand where a shot would cripple you least, and fired thru the fleshy part.

"Then you told your story, hoping to get a job out of it. Isn't that right?"

The old man's head was hanging on his breast. All the life seemed gone out of his whole body.

"Yes," he murmured, "yes."

"Sergeant," said the Captain, "you will take Mr. Hill back to the outer office."

Trembling like one sick of a palsy, the old man let himself be led from the room.

As the door closed after him, the doctor broke silence first.

"And he my cousin! I never would have believed it! But you"—he was confronting the Captain now—"where did you get all that stuff? Not from me. I only told you he had lost money and that his business was poor—and that he was weak about his wife, that's all."

"And the rest," said the Captain, "is written in his face."

The magnate sat speechless, while something about him proclaimed that the conference was at an end.

"Wait a moment, Captain, can you?" He laid a detaining hand on the soldier's arm as the others took their leave. "I'd like another word with you before you go."

As the door closed, he drew a chair close to his own.

"Sit down again," said he. "Do you know, it makes me fairly sick to

Reform

I'm thankful that the sun and moon
Are both hung up so high,
That no pretentious hand can stretch
And pull them from the sky.
If they were not, I have no doubt
That some reforming ass
Would recommend to take them down
And light the world with gas.

—"Bottles," published by Illinois Glass Co.

Which or Both

"I see this medicine is good for man or beast."

"Yes," said the druggist.

"Gimme a bottle. I believe that is the right combination to help my husband."

Missed a Gentle Jolt

"Hey, Bill," the electrician called down to his assistant, "grab hold of one of those wires."

"All right," said Bill, "I got one."

"Feel anything?"

"Nope."

"Good! I wasn't sure which was which. Don't touch the other one. It's got 6600 volts in it."—Baltimore Timely Topics.

MORE Dependable

FOR ALL FARM EQUIPMENT

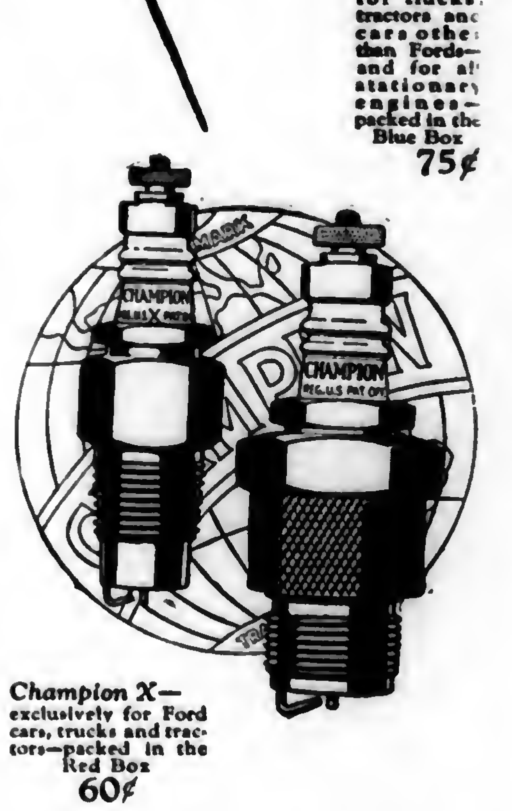
The enthusiasm for Champion—the *better* spark plug—on the farm lies in its absolute dependability.

Two out of three farm owners always buy Champions for trucks, tractors and stationary engines as well as for their personal cars for the very same reasons that two out of three motorists, the world over, give Champion the preference.

For full efficiency, dependability, long life and greater economy you will find Champion fully deserving of its world-wide reputation — the *better* spark plug.

Car manufacturers recommend, and hundreds of thousands of motorists are changing spark plugs every 10,000 miles to insure better and more economical car operation. This is true, even of Champions, in spite of their world-wide reputation for remarkably long life.

Champion—for trucks, tractors and cars other than Fords—and for all stationary engines—packed in the Blue Box 75¢



Champion X—exclusively for Ford cars, trucks and tractors—packed in the Red Box 60¢

Gas Service for Cooking

No Matter Where You Live

THE COLEMAN AIR-O-GAS Stove is a modern up-to-the-minute cooking unit. It brings all the advantages of city gas service right into your home—no matter where you live. It is easy, economical and safe to operate. It makes and burns its own gas—no piping, no wiring, no installation expense. It's ready to begin active duty the minute it is set in your kitchen.

The Air-O-Gas generates quickly to full cooking heat. Produces a cleaner cooking fire—no dirt, no smoke, no soot on utensils. Quicker cooking action—boils half a gallon of water in less than five minutes. You have a steadier cooking blaze—instantly regulated to any heat desired, from a low simmer to the hottest blue flame you'll ever need. Uses any good grade of regular motor gasoline as fuel.

Air-O-Gas Stoves are attractively designed and finished. Built in a variety of practical models to meet every cooking need. Priced within the means of everybody.

Let your dealer demonstrate this great stove. If he is not supplied yet, write us for descriptive literature, prices, etc. Address Dept. PA-8

SOILS AND FERTILIZERS

Dr. J. G. LIPMAN, Staff Contributor and Adviser
Director New Jersey Agricultural Experiment Station

THE following answers to inquiries from a Bucks County reader may be of general interest.

Under favorable conditions, sweet clover sown in the spring with oats grows rapidly and may interfere with the harvesting of the oats. Hence it would be desirable to sow the sweet clover seed in the oats after these are up.

The sweet clover would make a good green manure crop for wheat since it would not only provide humus material and nitrogen but would also improve the physical condition of the soil, thanks to its well developed root system. At the same time, it should be remembered that when a rank crop of sweet clover is plowed under, especially in the case of land already well supplied with nitrogen, there would be a tendency for the wheat to lodge because of the large amount of nitrogen added to the soil. Hence, it would be best not to delay unduly the plowing under of the sweet clover after the oats are harvested.

Rye is frequently sown as a cover and green manure crop after potatoes. Where the soil is inclined to dry out readily and the plowing is delayed in the spring, the rye may be too rank and woody to permit the establishing of a good seed bed for potatoes. Hence, many potato growers prefer to use wheat.

Where the ground has a tendency to wash in the fall or early spring, it would be preferable not to plow the sod in the fall. In the case of very heavy soil, this may be necessary to establish good tilth in the following spring, and now and then fall plowing may be desirable for the sake of facilitating the control of soil infesting insects, particularly white grubs.

Should you decide to plow the sod land in the fall, a cover crop of rye, wheat, or even of buckwheat or oats, might be recommended. Then oats and buckwheat would, of course, be killed by the first hard frost but would, nevertheless, provide enough cover to protect the land.

Lime Will Be Necessary

It is doubtful whether you would obtain satisfactory results by broadcasting clover seed on a well established pasture. If you find it necessary to try it, it would be well to broadcast some lime on the pasture, to disc it lightly, and then broadcast the clover seed.

The use of nitrate of soda or of other nitrogenous fertilizers where pasture is being established is usually worth while. If sulphate of ammonia is used rather than nitrate of soda, it would be desirable to make certain that the land is well supplied with lime.—Jacob G. Lipman.

The Captain of Troop A

(Continued from page 21)

think how nearly that old villain's scheme succeeded. Just this very morning, my wife and I were planning what we'd do for him. And a good, easy, permanent job was a part of it, if you'll believe it. Ah-h!" And he gave a shiver of disgust.

"But now, Captain, I want him to get the maximum punishment that the law provides. We'll make an example of him if there's any common sense in the Courts of Pennsylvania."

"MR. BURR," the Captain replied, "I don't in the least wonder at your feeling as you do. But I will ask your attention to certain aspects of the case. First very curiously, the worst that you can prosecute him for is transporting dynamite on a railroad track. He meant no crime.

"But aside from that I want to tell you a little about the man—more than it was necessary to make him endure. He is at heart as innocent as a child. He has a considerable degree of breeding and education, and in his earlier years possessed ability and comfortable means. But he was always a dreamer. Little by little his money filtered away.

"Now, all that he had is gone. His present business is a mere shell. He has a wife—the wife of his youth, grown old, in frail health, not long to live. He is as devoted to her as a lover, and has strained every nerve to give her the little comforts that make her life. He could never persuade himself to let her into the open secret of his slow descent into poverty. He thought it would break his heart to have her find it out.

"But now came the time when the wolf was actually clawing at the door. He had tried every expedient, every resource, every avenue to paying work within his ken. No use. Nobody with money to pay for labor, even the simplest, wanted him. He was too weak, too slow, too old. He had not the smallest value anywhere—not the smallest place. He could not keep the truth from her much longer.

"So, being a dreamer,—a man of eternal hopes and faith,—he dreamed once more, and with a brain almost unhinged by sorrow. And you have already heard the rest.

"No, Mr. Burr, you can prosecute if you like, and punish him as far as the law will go. But I would rather see you take another course."

"What do you want me to do?" growled the magnate.

"Why, if I were you"—the Captain smiled whimsically at the thought—"if I were you—it seems to me that this is what I'd do: I would send that heart-broken, nerve-shattered, harmless old man to some good sanitarium until such time as he shall have regained his normal balance—for it is more than tottering now. I'd be guided by conditions as they should develop, in the next step regarding him. And, meantime, I would set his mind completely at rest as to his wife.

"And I'd never let a single one know one word concerning any of it."

The speaker stopped, watching the magnate with sombre eyes. The magnate frowningly stared at his fingernails—at the floor. At last he looked up.

"Confound it all, I suppose you're right," he barked. "Might as well get some satisfaction out of such an ungodly mess!"

As the Captain stepped into the street, the Burgess joined him.

"Been hanging around like a dude at the stagedoor," he grinned shamefacedly. "What's going to be done?"

"There'll be no prosecution—nor any news."

"You don't mean it! Well, I am glad! Mighty decent of A. C., I must say. And, great Heavens! Think of what it will mean to Dr. Hill and all the connection! A family of that position!"

"'A family—of that—position,'" the Captain of "A" Troop repeated slowly. "Well, I confess I'd only been thinking of the poor old man."

Reliable Day-Old Chick Hatcheries

GREEN CORN, Texas, bushel baskets, $2.25. KALE, Maryland, bushel baskets, $1. LETTUCE Ohio, hot house 10-pound baskets, $1.50@1.75; California, Iceberg, per crate, best, $3.50@4; poor stock low as $2. ONIONS, Texas, bushel crates yellows, $2.65@2.75; whites, $2.75@2.85; California, bushel crates, yellows, $2.65@2.85; whites, $2.75@3; home-grown, per bundle of 1 dozen bunches, 10@15c. PEAS, California, bushel hampers, $2@3. POTATOES, 150-pound sack, U. S. No. 1 grade, Maine Green Mountains, $5.50@6.75; Michigan Rurals, $5@5.25; South Carolina, No. 1, Cobblers, slat barrel, $7.50@8.50; Alabama, 100-pound sacks, Bliss Triumphs No. 1, $4.75@5. RADISHES, Maryland, bushel baskets, buttons, $1.50. RHUBARB, home grown, per crate, bundle of 1 dozen bunches, 15@30c. SPINACH, bushel baskets, Maryland and home grown, 75c@$1.

Fruits

APPLES, barrels, New York, A-2½ inch Baldwins, $4.50@4.75; bushel baskets, New York, A-2½-inch Baldwins and Russets, $1.65 @ 1.75. CANTALOUPES, Calif, crate, Jumbos, $7.50@8; standards, $7@7.50; ponys, $5@6; flats, $2.65@2.75. STRAWBERRIES, 24-quart crates, Aromas, Kentuckys, best, $4@4.50, few $5.00, poor stock low as $2.50; Missouri, best, $4@4.50, poor stock low as $2.50; 32-quart crates, Marylands, $4.25@4.75.

Dairy Products

BUTTER—Creamery, 92 score, prints, 47@49½c; tubs, 46@48½c; local tubs, 43@44c per pound.

EGGS — Westerns, fresh select, whites, 29@30c; browns, 28@29c; candled, 27@28c; current receipts, 24@25c; locals, fresh select, whites, 24@25c; browns 23@25c; current receipts, 21@23c per dozen.

CHEESE—New York, full cream, mild, 27@28c; sharp, 30@32c per pound.

Poultry

Fresh killed, full dressed hens, 40c; hog dressed, 35c per pound.

Live poultry supplies liberal, demand slow, market dull. Heavy and light hens and Leghorns, 24@25c; roosters, 16@17c; broilers, colored, 40@42c; Leghorns, 30@33c; ducks, heavy, 28@30c; light 25@28c; geese 16@18c per pound. Common pigeons, 40@45c per pair.

Philadelphia Markets

OFFERINGS of strawberries were lighter in Philadelphia on Friday and the market showed a stronger tone of the best stock. Receipts by motor truck totaled approximately 9000 crates. Delaware berries topped the market and sold at $4.00 to $5.00 per 32-quart crate. Maryland stock brought $3.50 to $4.50 and Virginia's $2.50 to $3.75, according to the Pennsylvania and Federal Bureau of Markets.

Asparagus met a slow demand with Pennsylvania large green stock selling at $4.75 to $5.40 per dozen bunches, medium $3.60 to $3.75 and small $2.40 to $3.00. New Jersey large stock sold at $2.00 to $3.00 and extra fancy at $3.50 to $4.50. The market was steady in New York with Pennsylvania very large green grass selling at $5.00, large at $3.75 to $4.50 and medium at $3.00 to $3.50.

Mushrooms in Demand

Mushrooms were steady in Philadelphia and most sales ranged from 75c to $1.25 per 3-pound basket. There was a better demand for fancy stock in New York and prices advanced. Whites sold at $1.00 to $1.50, browns and creams at 75c to $1.10 and buttons at 50c to 90c.

The Philadelphia old potato market was firm with Maine stock selling at $4.40 to $4.65 per 120-pound sack. New potatoes weakened under a slow demand and more liberal offerings. South Carolina Cobblers sold at $7.00 to $7.50 per barrel. Rhubarb was steady at 1c to 2c per bunch while spring onions sold at $1.50 to $2.00 per 100 bunches. Parsley was in good demand and prices advanced sharply. Most sales ranged from $2.00 to $2.25 per bushel.

New York Markets

THE butter market ruled firm at one-quarter cent advance. Trading was active mostly for consumptive needs altho some long lines were sold for storage. Reported sales on 92 score at 42½c limited altho at close it was possible to obtain 92 at listed price. Much of the 92 score butter arriving is high, making it difficult for open market buyers to buy at listed prices particularly on a firm market. Medium and undergrades steady.

CHEESE—Trading quiet on both fresh and old cheese with the latter classes of cheese now in very light supply. Fresh cheese in easy position and general level on daisies around 23½c.

EGGS—Market weak. On the Mercantile Exchange there were 3 sales, 3 cars, 25½c; 2 sales, 100 cases, extra firsts, 24½c; 2 sales, 100 cases firsts, 22½c; 4 sales, 200 cases, medium firsts, 21½c; 1 sale, 50 cases, No. 1 dirties, 21c. Offerings extras, 26½@28c, no bid; brown extras, 28c, bid 26c; extra firsts, 24½c, no bid; white extra firsts, 28½@30c, bid 25c; firsts, 23½@24c, no bid; medium firsts, 21½c, no bid.

Feed Prices Higher

STRENGTH in the corn market and limited offerings of most feeds caused higher prices for feeds during the week ending May 25, altho buying at the advance was restricted to urgent needs, according to the Weekly Feed Market Review of the United States Department of Agriculture. The advance in corn prices of nearly 20c a bushel over the level of a month ago, largely caused by delayed planting, has widened the demand for feedstuffs in general and especially the heavier wheat feeds.

Altho production of wheat feeds has recently been larger than one or two years ago, dealers' stocks have been allowed to run low early in the season while the output of gluten feed, hominy feed and linseed meal appears to have been relatively small in the past two months. The late season in the Northeast has also made additional feeding necessary in that section.

Potato Fields Flooded

A COUNTRY-WIDE rise in potato prices has occurred, due to flood damage in some of the early potato sections of the Mississippi Valley, to lighter shipments from Texas and rumors of rapidly diminishing supplies of old stock. Maine has already exceeded her total of 1926 and there is some question as to the amount left on hand. Colorado and Idaho are pretty well cleaned up and the movement from New York State is quite light.

The floods in the Arkansas Valley have caused great damage and some fields were below 10 to 20 feet of water. Early reports indicate that possibly half of the plantings in Arkansas and Oklahoma have been destroyed.

To Simplify Meat Grades

OFFICIAL grade standards for several kinds of livestock and dressed meat are shortly to be promulgated by the United States Department of Agriculture. Included in the list to be given early attention are slaughter cattle, vealers, calves, dressed veal and calf carcasses, live sheep and lambs and dressed lamb and mutton. These standards will supplement the grade standards for carcass beef which became effective as Official U. S. Standards July 1, 1926. It is hoped that these additional standards will eventually supplant those unofficially in use in most large central livestock markets and packing centers, and form the basis of a common trade language for the livestock and meat trade of the entire country.

While the systems of grading at present in force are all based on practically the same fundamental principles, the fact that they differ in details constitutes an obstacle to their universal application. Grades are not described in the same way on all markets and producers or shippers getting quotations from different markets frequently find that a certain grade name does not mean the same thing in all places. Experience has shown that a multiplicity of standards leads to confusion, delay and loss, hence the department believes official standards will be generally welcomed by the livestock and meat trades, as well as by livestock raisers and meat consumers.

No sweeping changes in fundamental trade practices will be necessary, because the official standards are generally based on the same factors as the standards already in existence.

A Glance at the Markets

FARM markets took an upward turn in May. Corn advanced 18 cents. Wheat rose on poor crop reports, taking the other grains and mill feeds along. Planting is late in the grain country of the United States and Canada. Beef cattle touched high point of the season. Carlot supply of potatoes and cabbage was a bit light and prices rose sharply. Even the apple market gained a little. Butter was a slightly weak feature because of increasing supply. There was little change in eggs, cheese, and miscellaneous products.

GRAIN MARKETS have felt the effect of cool, backward weather in the United States and Canada. The new Argentine crop is also delayed by weather. Both wheat and corn reached highest points of the season toward the end of May. Good export demand is reported for hard winter wheat at near $1.50 per bushel.

Corn planting is late and it seems that only a long favorable season will insure a full crop. Prices are 20 cents higher than a year ago, most of the advance taking place in May. Market supplies seem moderate in quantity. Oats, rye and barley shared the upward movement to some slight extent. Mill feeds, especially gluten, hominy and cottonseed, were inclined to rise with the grains. Some of the demand has shifted to wheat shorts and middlings which have not gone up much. Hay markets continued dull and nearly unchanged.

BEEF CATTLE, long the weak feature of the livestock market, have been reflecting the better underlying conditions, chiefly the limited number available and in prospect. Some lines, since the middle of May, have touched highest point since war times. Hog prices find some difficulty in holding near $10 at Chicago. Sheep and lambs tend lower but spring lambs still bring good returns.

WOOL MARKETS continue to feel the supporting power of good demand and some gain in the domestic mill trade but without much change in price.

BUTTER PRICES tended to sag a little under the weight of heavier fresh supplies during the last half of May. The price direction usually continues downward as production gains. Recent declines have not amounted to much. Cheese market conditions are quiet with prices holding.

EGGS went off about two cents in May, but receipts are lighter now. Surplus eggs were being stored all thru the month, causing dealers to worry about the heavy holdings to be moved in fall and winter. Dressed poultry is coming out of cold storage faster than in early spring. Fresh supplies have been liberal but demand is good and prices hold fairly steady.

POTATOES AND CABBAGE have been strong features of the vegetable market. Old potatoes toward the end of May sold above $3 per 100 pounds and new above $4 in producing sections. The prospect is for moderate supply in mid-summer, owing to some frost and flood injury in southwestern sections and a slightly backward, uneven crop in parts of the East. Potatoes look well in Virginia and New Jersey, two leading late summer states. The early part of the Virginia crop is nearly ready to ship. Cabbage has been short because of drought in southeastern states.

THE TOMATO ACREAGE is reduced in some mid-season states. The Mississippi crop is early but some summer shipping sections are more or less backward. Prices have been rising. Western cantaloupes are of good quality this season and selling high at the start, with the usual quick drop. Heavy supplies from California and Arizona were scheduled for June. Watermelons are about average acreage and the early crop was reduced by a drought. The market has been acting better than a year ago.

Cameron County, Pa.—We have been having very wet weather. Corn not planted and no hopes of getting it planted very soon as the ground is water soaked. Very few potatoes planted. Everything will be about two weeks or more late this year. Many deer reported. There is a rumor there will be a five-day open season for does this fall. Something will have to be done pretty soon or the deer will destroy the farmers' crops. Eggs, 35c at local store; butter, 55c; old potatoes, $1 @1.50; corn, $1, unshelled; seed oats, 85c. —G. E. T., May 24.

Cumberland County, N. J.—Strawberries are ripening. Fields of early planted potatoes making a fine showing now. Crimson clover is in bloom. Thousands of baby chicks being delivered. The boys in the Hopewell agricultural department have been encouraged to buy chicks. The eighth grade commencement for Hopewell Township was held at Shiloh, May 28th. Dark red early blooming peonies were cut May 22rd. Corn is well up and the frequent rains have assured a good hay crop. Some farmers in this section have learned that crops which they grow are more dependable as money makers than the stocks peddled by promoters.—C. J. S., May 25th.

Dauphin County, Pa.—Corn planting delayed because of heavy rains and cold weather. Good seed corn high in price. Not so much clover in new grass fields but timothy is fine. Oats growing fast. Potato planting also delayed. Cherry crop will be very light. Wheat, $1.30, corn, 85c; oats, 60c; rye, $1, eggs, 25c; butter, 55c.—I. F. M., May 23.

Greene County, Pa.—Wheat and grass doing fine. Potatoes are coming up. Probably half of the corn planted. Too wet to finish plowing and planting. Some oats to sow yet. Sheep and cattle doing fine. Pigs scarce, $10@12 a pair, chickens, 25c; butter, 30c; eggs, 25c.—C. M. K., May 16.

Lebanon County, Pa.—In order to find the best sources of red clover seed for Lebanon County, the local Agricultural Extension Association with County Agent Berger in charge, planted eleven plots of seed on the John Hennetch farm at Millbach this spring. The seed came from Ohio, Tennessee, Virginia, Michigan, Minnesota, Idaho, Colorado, three different localities in France and Italy. If the weather continues favorable, these plots will show which seed is best adapted to our county. Local men say that tests at State College cannot be taken as a guide because the climate here is rather open during part of the winter. Other counties are making similar tests with clover seed. It took 17 days for oats to show above the ground and about 14 days for field corn. All corn that is up is yellow. We have had but a few days of warm sunshine this spring. Almost all early cherries were frozen. Apples, quinces and other late blooming fruit show no apparent damage. The eight-month schools are closed. State road making has commenced. There are many candidates for county offices. Our commissioners got a raise to $3000. Eggs, 22c; hay, $20; oats, 55c; corn, 70c; wheat, $1.40 up, butter, 55c.—R. I. W., May 23.

McKean County, Pa.—At the Tri-State Wool Show held at Wheeling, W. Va., the McKean County Sheep and Wool Growers' Association won first, third and fourth places in three-eighths blood class. This spring a fine purebred Belgian stallion was placed on service in the county. He has won the championship at the Ohio State Fair for two different years. A census has been taken of the grade and scrub bulls in the county as a start toward the eradication of the scrub bull. A public forest tree planting demonstration conducted by Professor F. T. Murphey, of State College, under the direction of the McKean County extension office, was held at the R. J. Gates farm at Mt. Alton and was largely attended. There was a light fall of snow in certain sections several days ago, rain has been general for over a week, putting farm work far behind its usual schedule. Potatoes, $1.50; butter, 50c; eggs, 30c.—F. J. H., May 19.

Mercer County, Pa.—Season very backward, some plowing to do yet. Very little corn planted. A few have planted potatoes. Some oats still to sow. Meadows and clover damaged by frosts in April. Clover a very poor stand even where lime was used; from present indications hay will be a short crop. Farmers making a strong effort to clean up corn borer but it is up-hill business and many are disgusted; taking too much time and causing delay in other work. Many have no help and are not able to hire men at wages asked. Cattle and other stock out on pasture. No demand for hogs at any price. Suckling pigs bring $5@6 each. Veal calves very slow sale; good demand for butcher cattle of all grades. Dirt roads being worked but during this weather a few trips over them with trucks put them in as bad condition as before. About 100 miles of slag and cinder road will be built this year, the state and county helping to pay for them. Milk, 3.5 per cent, $2.44; eggs, 18@23c; other prices unchanged.—J. W. B., May 20.

Union County, Pa.—The car load of 64 Holstein calves and heifers brought to the county by the county bankers' association was disposed of yesterday in Mifflinburg. Four men went to Michigan for this load of stock which had been ordered by boys and girls of calf clubs in different parts of the county. Price ranged from $70 for calves from last September to $275 for bred heifers. The Mifflinburg Bank and Trust Company furnished the money to buy this car load. There is a great demand for registered and tested cows which will be better producers, which will make a better market for good cows here. Much corn ground is yet to be fitted for this crop, due to the continued wet weather but grass and wheat crops are making good growth. The last of 1926 wheat crop is being marketed at $1.30 and there is a better demand for good corn at 75c a bushel. A few farmers have turned cows out to pasture but rough feed is plentiful. Lewis Township voted to consolidate their seven schools and to build a $35,000 school building this year between Millmont and Swengle where the present frame high school building stands.—J. N. G., May 20.

The Market Place

By W. R. WHITACRE
Pennsylvania Bureau of Markets

WHEN I worked on the farm and hauled produce to market I never could understand what made prices go up and down. My father was a druggist and tooth paste, castor oil, paregoric and all other merchandise sold at practically the same price thruout the year. When he would buy a lot of goods he would figure what price he could sell for and make a fair profit. But my uncle grew tomatoes, perhaps one week they would bring $2.00 per basket and the next 50c. I could not see why this should be, and why if $2.00 was the lowest price at which they could be produced at a profit, that the commission man should not sell them at that figure.

An Over-Supply Lowers Prices

The commission man said that "It's because there are too many of them around and people don't want them." Not so long ago I took a course in economics that went into great detail to explain the law of supply and demand. The explanations and exceptions were so long and complicated that the law became confused with the explanations.

When it is reduced to its simplest form it is quite easy to understand. As supplies increase the demand is less active and prices fall. Suppose Philadelphia will consume fifty cars of tomatoes a day. As long as an average of fifty cars of tomatoes arrive the price will be steady and the demand good. Now suppose 75 cars a day begin to arrive, which is more than the city will regularly consume. The result is an over supply and the consuming demand of the city will not be able to clean up the daily arrivals and prices will fall.

If that was all there was to the law of supply and demand fewer students would flunk economics courses, but there are so many things that influence the law that many volumes have been written and there is still much left to tell.

Many Factors Influence Demand

The confusing part in applying the law of supply and demand to the marketing of farm products is that actual supply is very difficult to determine and in reality it is what the people believe to be the supply or amount available. Again, the demand in theory might be considered as set, but in practice it is influenced by many factors. Large firms spend fortunes yearly to stimulate the demand for their products thru advertising. Weather and even fashions affect the demand for farm products.

It seems a long call from the style centers of Paris to a Pennsylvania potato field but undoubtedly the consumption of potatoes has been affected by the fact that it is stylish to be slim. Someday, perhaps it will be pleasing to be plump and then watch potato acreages grow.

New Storage Opened

ANOTHER step in the rapid growth of the fruit and vegetable business in Philadelphia was completed with the opening on May 10 of a new cold storage unit by the Baltimore and Ohio and Reading Railroads. This new plant will be operated by the Quaker City Cold Storage Company.

In addition to the cold storage a private sales building was also opened. This building is of reinforced concrete and is 90 feet wide and 900 feet long with a concrete platform along one side. It will be served by three tracks and 72 cars may be placed at one time for unloading. This sales building is intended for products not usually sold at auction.

Twelve Below Zero for Sea Food

The cold storage machinery is of the latest type and will furnish temperatures ranging from 12 degrees below zero, for sea food, to 60 degrees above. It is designed to meet every need of a modern terminal and in addition to the fruit and vegetable trade, will also be used for the storage of butter, eggs and poultry.

The first unit of this terminal was opened November 1, 1926, and has a capacity of 100 cars. It is here that the western boxed apples, citrus fruits and grapes are handled. The entire terminal covers over 23 acres and is located to facilitate the rapid and efficient handling of perishable products.—W. R. W.

Rambles of a Fruit Grower

(Continued from page 9)

estly advertised on roadside signs for a hundred miles around as "Harvey in the Hills," also as "The Alps of Florida." I had visions of snow-capped peaks and far flung views, and so on. The reality was somewhat disappointing. The hills proved to be little rises of land; the highest peak of the Alps was 320 feet above sea level.

An elevation ten feet above the surrounding country is sufficient to justify a Florida real estate man in opening a sub-division called Pasadena Highlands. As a horticulturist, however, I soon learned that even a few feet difference in elevation may make the difference between a frozen orange grove and a safe one.

The boom is over. In 1922 there were 5000 real estate men in Florida. In 1926 there were over 50,000. Today there are about 10,000. The 40,000 have departed for greener fields. Money is tight, bank failures not infrequent, and, according to Rober Babson, "Even the Sunshine and Optimist clubs have either disbanded or temporarily suspended operations." There is a dark brown taste in the mouth of the Commonwealth of Florida. At the University of Florida I found that many students are leaving college in mid-year; the collapse of the boom, the hurricane and the January freeze have put too much of a strain on dad's pocketbook.

Florida has made the sad mistake of over-exploitation, but it will recover quickly. The foolishness of men cannot abate the brilliance of Florida winter sunshine. This will continue to lure people from the North, in steadily increasing numbers.

Should Sell Crops—Not Land

Florida, as a state of winter homes, is on a substantial basis. To permanently attract and hold people, however, industries are needed also. To quote Babson again: "The real reason why the Florida boom collapsed was that there were not opportunities enough in Florida to enable people to earn a living." These opportunities are very largely in the production of fruits and vegetables. I came away from Florida thoroly convinced that the permanent prosperity of the state will rest fully as much on its horticulture as on its winter residents.

Florida ought to think more about producing crops and less about selling land.—S. W. Fletcher.

Kellys cost no more to buy -and less to own

Even when Kelly-Springfields were higher priced than other tires, their purchase was an economy because of the longer service they gave.

Since they now cost no more than any of the well known makes and are even tougher, sturdier, longer lived and easier riding than their predecessors, their purchase is an even greater economy.

Try one the next time you need a tire, and see for yourself if it's not so.

"Kelly dealers everywhere— there must be one in your town"

Many Lose Thru Failure to Trim Lambs

THE practice of castrating and docking market lambs has become more general during the past few years because of the educational campaign that has been conducted in all parts of the country in the interest of better market lambs. Farmers who have watched this phase of sheep management have found that it was time well spent and that it was an important factor in putting the sheep account on the right side of the ledger.

There are many farmers, however, who are not docking all the lambs and are not castrating the buck lambs as evidenced by the number of undocked lambs that can be seen on a trip thru Pennsylvania, Maryland and Virginia. Some of these farmers may be producing lambs for the first time and have not had the experience to know the difficulties that are usually encountered when marketing lambs in the fall that are not properly trimmed. They do not fully appreciate the extent of the discount at which lambs of this kind are sold.

Sheep Growers Warned

A recent editorial in one of the central trade papers should serve as a warning to all sheep growers. The editorial reads as follows:

"Thousands of dollars are lost every year by sheep men failing to dock and trim their lambs at the proper time. When buck lambs are sent to the market they sell at a big discount, at times as much as five cents a pound less than wethers. As many farmers are beginning to keep small flocks they will find docking one of the most important factors in getting the balance on the right side of the ledger."

While this applies in this particular case to the markets of the Middle West, the same discrimination is made on the eastern markets. The farmer not only sustains a loss because the lambs sell for less money, but it also requires considerable more feed to finish for market a bunch of buck lambs. In flocks of sheep where the docking and trimming has been neglected it will still pay the owner to have this done before the weather becomes too hot. An increase of several cents per pound on all the lambs marketed will more than pay for the work or any losses that might be sustained.—W. H. T.

Horse Needs Exercise

I have a stallion and am feeding him a grain combination of 50 per cent of oats and 50 per cent bran. I am feeding him timothy hay. He is kept in a large box stall practically all the time. Can you suggest any improvement on the method of feeding and handling of the stallion?—R. J. W., Perry County, Pa.

The ration which you are feeding will give you fairly satisfactory results. It might be improved, however, by adding greater variety and reducing the amount of bran that you are now feeding. A combination of 50 per cent oats, 20 per cent bran, 20 per cent corn and 10 per cent oil meal would improve the character of the ration. The hay is satisfactory, altho some people might prefer to feed a mixed clover hay if the quality is good.

The amount to feed the stallion will vary during the different seasons of the year. During the time when the horse is standing for service heavier feeding must be practiced than when he is idle. During the breeding season the weight of the animal should be maintained.

The horse should have more exercise than he is now getting. Lack of exercise usually results in a number of mares being returned for service.—W. H. T.

Dairy Demonstration Train Brought Prizes and Calves

MORE than 23,000 persons visited the Dairy Demonstration Train which recently made a tour of the lines of the New York Central Railroad in the northwestern and central counties of Pennsylvania.

The Pennsylvania State Chamber of Commerce, local Chambers of Commerce and other business men's organizations, the Pennsylvania State College, the State Department of Agriculture, the Vocational Bureau of the Department of Public Instruction and the dairy cattle breed associations cooperated in arranging for the train, preparing exhibits and staging programs at the various stops.

Posters and Essays Won Prizes

At all but two of the stops prizes were awarded to school children who submitted posters and essays on the value of milk as a food and the importance of good breeding in building up profitable dairy herds. Children from six schools in communities where stops were not made also were given prizes for their posters and essays.

The prizes for essays were awarded jointly by the New York Central Railroad and the Pennsylvania State Chamber of Commerce. Prizes for the posters were donated by local Chambers of Commerce and civic clubs and ranged from $20 down to $1.00.

About 200 essays and over 100 posters were submitted by the school children. The prize-winning posters from each school will be included in an exhibit which will be shown this fall at the National Dairy Show at Memphis, Tennessee.

Winners Will Enter Calf Clubs

The Chamber of Commerce at Clarion offered three special prizes, the first being a $200 Guernsey calf, the second a purebred Berkshire pig and the third 75 day-old chicks. The Brookville Chamber of Commerce also gave a $250 purebred Guernsey calf. Both of the boys receiving these calves will become members of dairy calf clubs.

A total of 66 purebred calves was distributed from the train to young farmers,—45 Holsteins, 17 Guernseys and four Jerseys. As a direct result of the interest aroused by the train it is expected that nearly 70 additional calves will be placed with farm boys in Crawford, Mercer, Clarion, Clearfield and Jefferson Counties, besides an additional number in Tioga County.

In many cases local banks loaned to ambitious boys in their territory the money with which to buy one of the calves delivered on the demonstration train.

FARM LANDS

MAGNIFICENT RIVERSIDE ESTATE The pride of wealthy owner; sacrificed to settle estate, 247 acres on state road adjoining village, long river frontage, about an hour to one of East's greatest cities; 135 acres highly cultivated, pastures 40 head, virgin timberland; handsome 12-room brick Colonial, modern throughout, lovely grounds and shade to the water's edge; main basement barn 50x90, silo and running water, other fine buildings. The 1926 income was $12,000, the house alone would cost the price to replace, but to settle estate $20,000 takes it, including 10 horses, 40 cows, 10 hogs, sheep, modern machinery and all crops; about 1/3 cash. Picture and details pg. 98 big Illus. Catalog. Copy Free. **Strout Agency, 1422-BE Land Title Bldg., Phila., Pa.**

Veterinary

Conducted by Dr. J. F. Shigley
Associate Professor of Veterinary Science, Pennsylvania State College, and Veterinarian in charge of College Livestock.

Advice thru this department is free to our subscribers. Each communication should state history and symptoms of the case in full; also the name and address of writer. Initials only will be published. We invite readers to make use of this service. Clippings from the column when properly preserved and classified, make one of the most valuable medical symposiums a farmer-stockman can obtain.

IODINE A DRUG, NOT A PLANT FOOD—UNTHRIFTY CATS.—Please tell me how to give iodine, which you recommended recently to overcome hairlessness in pigs. Can it be given in the food? I would also like advice about Persian cats. I raise them for sale and occasionally a litter does not develop fur as they should. Would rice help any? I feed raw and cooked meat, eggs, milk, vegetables and prepared cat foods. I have just started feeding yeast and cod liver oil.—Mrs. A. H., Chester County, Pa. While iodine is found in some plants, it is really recognized as a drug, or one of the elements associated with the mineral requirements of the body instead of a food element. Perhaps it might be interpreted as a food if one were willing to stretch a point, inasmuch as the animal does require some iodine. Heavy losses have been experienced in these sections due to losses of newborn pigs, lambs, calves and foals because of goitre or hairlessness. Recent investigations have shown that iodine administered in the form of potassium iodide to pregnant dams will prevent the trouble. Two grains of potassium iodide per head daily may be mixed with the feed. One tablespoonful of a solution of one ounce of potassium iodide to a gallon of water makes the required daily dose for a pregnant sow. It is a question whether the rice would be of any advantage. The use of yeast and cod liver oil will probably be more effective. The diet is apparently very well balanced and should be sufficient to meet the needs when using the above supplement you have just started.

WARBLES.—Can you tell me what will cure warbles in cows. I have three affected along the backbone. Any information will be greatly appreciated.—N. S., Oakland Mills, Pa. The warbles should be squeezed out thru the hole that serves as an opening for breathing. Crush the warble and this will cut down the number of flies. Drain the breeding places of flies. During the summer a fly spray may be used to advantage.

Social Worker—And what is your name, my good man?

The Convict—999.

Social Worker—Oh, but that's not your real name.

The Convict—Naw, that's only me pen name.—De Laval Monthly.

Our Readers' Classified Advertising Department

A market place to buy or sell at little expense. Over 100,000 farm families read Pennsylvania Farmer every week. Rate 8 cents a word each for one, two or three consecutive weekly insertions; 5 cents a word each for four or more insertions. Count each number and initial and send cash with order. Orders, discontinuances or changes of copy must reach us by Wednesday of week preceding date of issue. All advertisements set in uniform style, no display type or illustrations. Poultry advertising may run here, but if displayed or illustrations used must run in display advertising columns at commercial advertising rate (65 cents per agate line). Livestock advertising not accepted in this department. Minimum, ten words.

The World's FIRST Solid Trainload of FARM WASHERS — Every one a MAYTAG with Gasoline Multi-Motor

FOR the first time in history, one distributor, serving one section of the country, takes a solid trainload of multi-motor washers in one shipment for distribution to farm homes exclusively—showing the overwhelming preference for Maytag washers.

The size of this shipment is even more astounding when you consider that it consists entirely of Maytag Aluminum Washers equipped with gasoline power, whereas many farms have electricity and buy the Electric Maytag.

The Maytag gasoline Multi-Motor with a record of 10 years' successful performance, is just as simple, compact and dependable as an electric motor. It is in-built, a part of the washer—no belts to line up, and has a simple foot-starter that a woman can operate. There is sufficient power to run both the washer and wringer at the same time.

The Maytag is the only washer with a seamless, cast-aluminum tub. It holds four gallons more than ordinary washers—does an average washing in an hour. Washes everything beautifully clean without hand-rubbing—even collars, cuffs, wristbands and grimy overalls.

Free Trial

for a whole week's wash

Write or phone one of the Maytag dealers listed below. Without cost or obligation use a Maytag Aluminum Washer for your next washing. Discover for yourself the many advantages that have won World Leadership for the Maytag. If it doesn't sell itself, don't keep it.

THE MAYTAG COMPANY
Newton, Iowa

To farmhouse exteriors as well as to interior walls and woodwork, lead paint made of Dutch Boy white-lead brings enduring beauty

HOW will you protect the exteriors of your farm buildings from the ravages of the weather? How will you decorate your farm house inside? Our booklets—"Handbook on Painting" and "Decorating the Home" (printed in color)—will help you decide. They give valuable information about the use of paint and the selection and application of distinctive color treatments. Write to our nearest branch for these booklets. With them you get a decorator's data form to use if you desire the help of our Department of Decoration on any special painting problem about the farm.

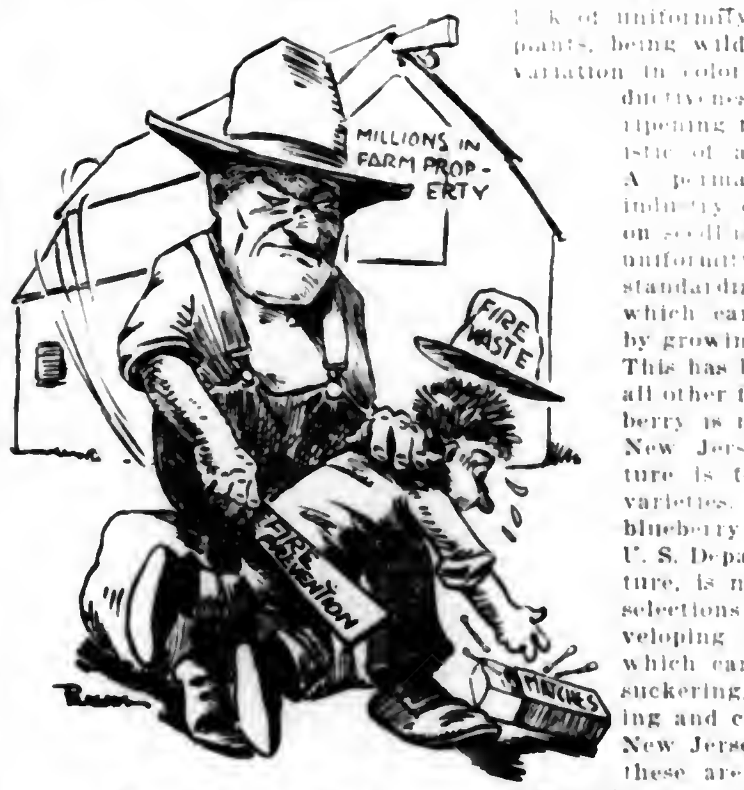
XII. Blueberry Culture in Florida.

TRAVELING toward the setting sun on the Old Spanish Trail one needs only a grain of imagination and a modicum of historical perspective to visualize the adventuresome days when Spain, France and Great Britain clashed for control of this empire of the Mississippi Valley and the Southwest. The Gulf Coast country is flat and is crossed by numerous bayous. The highway crosses some of the larger bayous by ferry. This region has great and, as yet, largely undeveloped agricultural possibilities.

The horticultural features that interested me most were the blueberry culture and the Satsuma orange industry. The former centers near De Funiak Springs in eastern Florida. About 1500 acres are planted mainly in tracts of three to thirty acres. The land is flatwoods, costing $100 to $200 an acre, cleared. Practically all the plants are wildings taken from near by swamps. They [illegible] to twenty cents each. T[illegible]



Fanning the Spark

Rabbit-eye Blueberry, a different species from that grown commercially in New Jersey, being smaller, darker in color, more seedy and, as I think, less palatable. The plants are set twelve feet apart each way in the light sandy soil characteristic of this district. They grow six to eight feet high. Practically no care is given except cultivation; there is no pruning or spraying and very little if any, fertilizing. About the only expense is for picking.

The plants begin to bear paying crops the third year. Some of the best of the older bushes of M. A. Sapp, the pioneer in blueberry culture, bear forty quarts. They have the long bearing season characteristic of most fruits in this sub-tropical climate, ripening over a period of three or four months, beginning the middle of May. At this date (March 16) the bushes are full of blossoms and green berries. Picking costs five cents a quart. The berries ripen singly, not in clusters, hence they cannot be harvested with a scoop. Thus far, the market has been chiefly the Gulf Coast cities but the time has come when a wider market must be sought. The 400 acres that will come into bearing this year will over-stock the local market. Car-lot shipping of fresh berries, and a canning factory to take care of the surplus are among the immediate necessities. Prices of $4.00 to $6.00 a crate of 24 quarts have been realized.

The chief obstacle to success is the lack of uniformity of product. The plants, being wildings, have all the variation in color, size, flavor, productiveness and season of ripening that are characteristic of all seedling fruits. A permanently successful industry cannot be founded on seedlings. There must be uniformity of plants and standardization of product which can be secured only by growing named varieties. This has been the history of all other fruits and the blueberry is no exception. The New Jersey blueberry culture is founded on named varieties. Dr. Coville, the blueberry specialist of the U. S. Department of Agriculture, is making crosses and selections in the hope of developing improved sorts which can be multiplied by suckering, stumping, layering and cuttings, as are the New Jersey varieties. Until these are available so that standardization of product is possible, the future of the Gulf Coast is in doubt.—S. W. Fletcher.

What Should He Charge?

A READER asks what is a proper price to charge for doing grafting work when the work is done at so much per growing graft. If anyone can give us the information we shall be glad to publish it. The old-time grafters used to put in the cions in May, come around about July 1 to count the growing grafts, and charge for those growing.—Editors.

The Camping Season Arrives

Octoraro Creek, near Porter's Bridge, Maryland, is a favorite camping spot. It attracts people from Ohio and New Jersey as well as from nearby points in Pennsylvania and Maryland.

Lightning Rods Must Be Grounded

Good Material and Good Workmanship in Protectors Above Ground Not Enough

By JOHN R. HASWELL
Agricultural Extension Engineer
Pennsylvania State College

ONE does not have to go far nor hunt long to find numerous instances of lightning damage on farms in practically every community.

Every bit of ungrounded metal work in the buildings, whether it be beams, hay tracks, stanchions, milking machines, or electric circuits, furnishes a menace. There may be no direct hit, but an induced charge may result from a flash a mile or more away and set fire to the building.

Two points in lightning protection should receive much more attention in the future than they have in the past. The first is grounds for the down rods. A section of cable pushed down a small hole in the earth is not satisfactory, even if the hole is filled with water and the cable puddled into tight contact. According to U. S. Farmers' Bulletin 842, page 21, this "should not be allowed." It is better to anchor the rod to a ground plate, a cast iron mower wheel, or some such body of metal which does not rust easily, set at a depth of at least ten feet. Get it below the level of the foundation. Should no such device be available then the cable should be opened out and the strands spread in the soil so as to come into contact with much more of the earth. This is easily done by digging a deep ditch a short distance from the foundation.

Association Adopts Safety Code

The safety code for the protection of life and property against lightning adopted by the National Fire Protection Association gives "some essential features of good practice in grounding for protection against lightning as follows:

"(a) Where practicable, each artificial ground connection should extend, or have a branch which extends, below the foundation walls of the building, as otherwise there is a chance of the wall being damaged.

"(b) The metal composing the ground connection should make contact with the soil from the surface downwards, for if contact is made below the surface, as might be the case where a ground connection is made in a well, there may be a flashing at the surface with danger of burning off the conductor.

"(c) During a stroke of lightning on a system of conductors the ground connections are to be thought of as the collecting points for a heavy flow of current in the surface of the earth, radially towards the building, and should, therefore, be distributed with the view of collecting this current in the most advantageous manner. This will generally be accomplished by placing them at the outer extremities such as corners, and avoiding as far as possible the necessity for current flow under the building to reach a ground connection."

The various kinds of grounds recommended in the safety code are as follows:

"(a) Waterpipe Ground Connections: Where a waterpipe enters a building, at least one down conductor shall be connected to it at a point immediately outside of the foundation wall by means of a substantial clamp to which the conductor can be attached by bolts or solder.

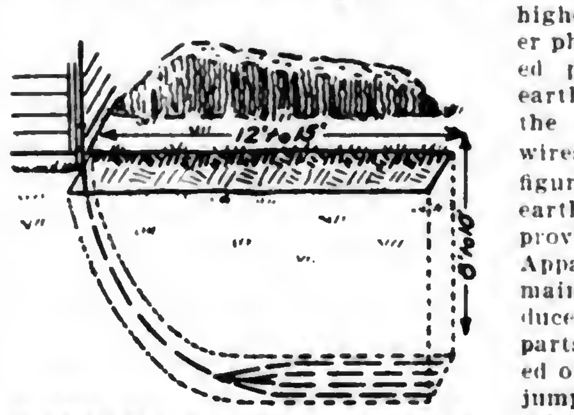
Sandy Soil Requires Metal Conductor

"(b) Artificial Ground Connections in Deep Soil: Where the soil is moist clay or other soil of similar character as to electrical resistivity, artificial ground connections may be made by extending the rod itself into the ground a distance of not less than 10 feet. Where the soil is largely sand, gravel or stones, more extensive artificial ground connections shall be made by adding metal in the form of driven rods, or strips, plates or lengths of conductor buried in trenches as in (c).

"(c) Artificial Ground Connections in Shallow Soil: Where bed rock is near the surface, ground connections may be made by digging trenches radially from the building and burying in them the lower ends of the down conductors or their equivalent in the form of metal strips or wires. Where the soil is very dry, or will not permit digging to a depth of more than one foot, in addition to the conductors laid radially, a similar conductor shall be buried which encircles the structure to be protected and connects all of the down conductors together."

Difficult locations should be handled by an experienced workman, remembering that the only idea in the whole installation is "to permit the dissipation of a stroke of lightning without damage."

Another feature which is coming to the front every day is the use of metal in the building near the lightning rods. We all have heard about connecting the hay track to rods but often forget stanchions or water lines which may be too close. Even electric light wires have been known to produce a side flash which took some of the charge from the rods and conducted it into a barn at the floor level. Then the flash circled half way around the building and set the under side of the hay loft on fire at a chute. Prompt work of two men with an extension ladder saved the valuable building. In this case the metal parts should have been at least six feet away from the rods, measured the shortest distance, even thru walls, since these make little difference to lightning.

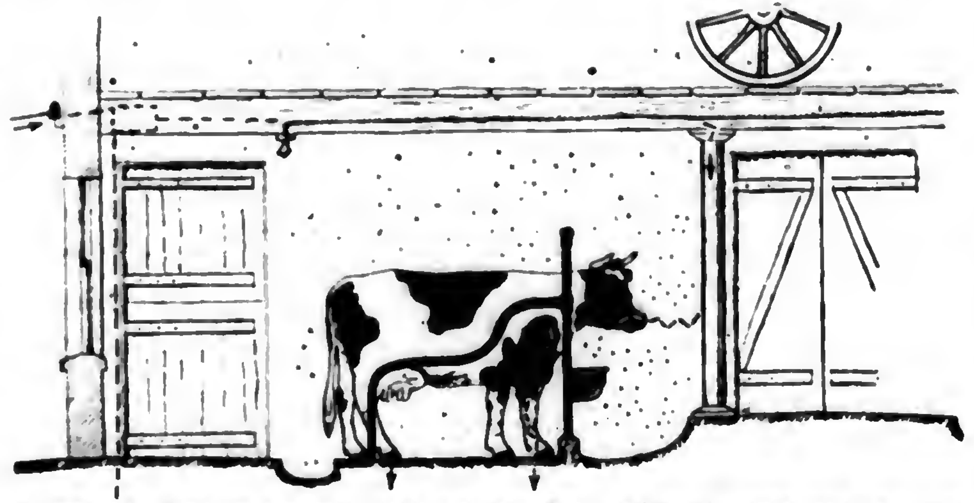


A good lightning rod ground may be formed by spreading a stranded cable.

An example illustrated in the cut will cover several of the points. The cow was one of thirteen standing to the left of the feeding alley. Two of them, numbers 5 and 8 in the row, were nearest the iron columns supporting the barn floor above. The bases of the columns were on the dry concrete of the feed alley and the caps were about eight inches from the electric light cable nailed to the floor beams.

The building had long been equipped with lightning rods and no trouble was experienced until electric lights were installed. The metal stanchions were grounded thru the water pipes supplying the drinking cups. The two cows mentioned, numbers 5 and 8, were standing on construction cracks in the concrete floor, which due to damp bedding gave good contact with the earth.

According to the testimony of the owner who, at the time of the flash was in the wagon shed next the cow stable where the rod forming the ground for the electric wires was driven, and according to the solution suggested by two of the highest authorities in weather phenomena, the cows formed parts of circuits to the earth. Lightning came into the building from the line wires shown to the left of the figure. Part of it went to the earth thru the ground wire provided in the wagon shed. Apparently some of the remainder of the bolt or an induced charge in the metal parts of the building, collected on the electric light wires, jumped to the iron columns (shown by the irregular broken line), from thence to the cows' noses and thru their bodies to the earth. By the time the farmer had come in from the wagon shed the live cows were getting to their feet again and numbers 5 and 8 were dead.



A cow standing on a crack in a concrete floor, with her nose near an iron column formed part of a circuit from electric light wires to the earth. When a lightning bolt jumped the gaps the cow was killed instantly.

Proper Wiring Would Lessen Damage

The remedy suggested was to place a section of lightning rod on the outside of the building, the lower end connecting to a water pipe from the barn to the house and the upper end coming to within an inch of the electric light wires where they enter the building.

If the wires had entered the iron electrical conduit outside the building, as has now become standard practice, and it had been grounded directly to the earth before entering the building, it is probable that the damage would have been slight. Of course, the cows standing on the joints in the concrete would get the worst shock and in the above case were killed.

The farmer on his own initiative has since erected a standard lightning rod cable on the electric light pole between the house and barn. This has a point on it and is well grounded. No further trouble has been experienced.

Club Members Get Purebred Pets

FIFTY-SIX Holstein calves recently have been alloted to as many Union County 4-H Club boys and girls in the largest distribution of calves ever made in Pennsylvania. Fifty of the calves came from Livingston County, Michigan, which is the second largest center of purebred Holsteins in America.

In the distribution eight bred heifers also went to adult farmers of the county, according to County Agent Craumer. The club calves were valued at $8500. Union County banks cooperated with the Agricultural Extension Association in sponsoring the movement.

OUR JOB is to serve our readers. Whenever you are puzzled write to us and we will help you if we can.

Search others for their virtues, thyself for thy vices.
—Franklin.

Courtesy an Asset in Selling

AN OFFICIAL of one of our great railroads at a meeting of railroad men took as the subject of his address, "Courtesy, a Fundamental of Service." He showed how necessary it is for people who deal with the public to display kindness, fairness and courtesy if they would succeed. Successful men in all walks of life have learned this fact. Time was when crustiness and bluntness were thought to be signs of greatness, and some people seemed to glory in affronting individuals and the public in general. But all that has been changed by the public itself thru selection. Competition is too keen and the public will not long deal with a boor. The truth of this holds for farmers who deal directly with customers, whether at the kitchen door or the roadside market.

Crop Conditions

THE season so far has not been favorable for crops in general. With the exception of wheat and grass, the low temperatures and frequent rains have retarded the growth as well as the planting of many important crops. Reports from many sections indicate that corn already planted has rotted in many instances, while that which germinated is making very unsatisfactory growth. The unusual thing about the effect of the unfavorable weather on agriculture is that it is almost nationwide. Unless conditions become more favorable soon the usual yields will not be secured. In fact, many localities can scarcely hope to secure a ripe corn crop if seed is planted after June first.

And Still They Want

WHILE strikes are much less frequent than was the case two years ago, still we hear of one occasionally. Just now the soft coal miners in some sections are out on strike, and last week the bricklayers in Pittsburgh quit because they were refused $1.70 an hour and a five-day week. They have been receiving $1.62 an hour for a five and one-half day week. One reason given is that there is not so much building work going on, hence work is scarcer. They probably have not stopped to think that one reason why people hesitate about building now is the unconscionable wages demanded by the artisans.

International Soils Congress

AMERICA is honored by having the first International Soils Congress meet at Washington next week. The leading scientists and soil specialists from seven of the leading nations compose the organization committee, while representatives from several other countries will attend also. After the meeting the scientists will make several tours into different sections of the United States and Canada to study soils and experiments.

While most of these men may not be actual farmers, the work of the class of scientists whom these men represent has practically revolutionized the knowledge and practice of agriculture during the past half century. The soil is the greatest and most important natural resource of this or any other country, and farmers should welcome the news that the soil specialists are placing soil before the public in its true economic importance. Scientific men in other lines have for years been collating information on the world's resources of water, iron, coal, petroleum, etc., and it is fitting that the greatest of all should be studied in an international way.

Markets Must Be Made

PEOPLE used to go on the principle that selling was merely the supplying of commodities to an existing market. The modern idea is to create markets by creating a demand thru advertising. One need only glance over the list of things which have become staple articles in trade which a few years ago were non-existent, or which were bought only occasionally as luxuries. Many of these things have displaced other commodities. There are perhaps more examples of this in staple food articles than in anything else, notably in bread, potatoes, meat, apples, etc. In almost everyone of these, the per capita consumption has fallen steadily because other things or modifications supply a large part of the food requirements of the public.

Apple growers should make a note of this fact and begin in earnest to reestablish the apple in popularity with the public by adequate and judicious advertising. This old and excellent fruit has suffered during the past few years by being supplanted by other greatly advertised fruits. The "Apples for Health, Inc.," organization is a national organization formed for the purpose of remedying the situation and should have the support of every grower.

Farmers have not been active advertisers, rather clinging to the old belief that, "people must have food and there is no need for advertising it." Yes, they must have food, but only so much. The total amount necessary to life cannot be greatly increased, but one article can and does push out another, and advertising is the means by which it is done.

Have a Supply of Necessities

A FARMER had to stop important work the other day and travel three miles to town (with a horse and buggy because his auto lacked an inner tube) to get an ordinary two-inch machine bolt. But he is like that. He never has any supplies of anything, whether it be nails or gasoline. Buying in the smallest of small quantities is his practice, and we have no doubt that he got only one bolt of the frequently needed kind on the day in question. We very much doubt whether any such "brigglers" will be nominated for the Master Farmer Award.

Big Strawberry Crop

REPORTS indicate that the crop of strawberries this year will be about twenty per cent larger than that of last year, or an increase of about 55,000,000 quarts. The area devoted to strawberries is about twenty-five per cent greater than in 1926, hence the yield per acre is somewhat less. The crop in the eastern states is not so good as it was last year.

Most other fruits promise to be below the yield of 1926. Peaches, apples, plums and cherries were badly killed or greatly injured by frost in many localities, so that the strawberry ought to be a favorite and sell readily even if the crop is big.

If Corn Fails

IF FOR any reason corn cannot be planted, or does not promise a normal yield, provision for plenty of forage and winter feed should be made by planting something else. Soy beans is one crop which may be planted as late as the middle of June with success, unless ripened seed is wanted. Soy beans are valuable wherever stock is kept and we should like to see a more general planting of this valuable legume. For forage or hay they may be drilled with a grain drill. Ragweed and smartweed are the greatest enemies, hence a weed-free field should be selected.

QUESTION TARIFF ACT

President's Authority Discussed by Attorney General Destitute Flood Victims Will Require Aid of Entire Nation—Mail Carriers Assist Pig Survey.

Washington, D. C.

THE constitutionality of the flexible provisions of the tariff act of 1922 is being attacked in the courts by importers who are attempting to show that Congress has no right to delegate its powers of levying taxes to the President. In defense of the law the Department of Justice contends that the provisions in the act which give the President authority to vary tariffs to meet differences as ascertained by him in costs of production at home and in foreign countries, do not delegate to the President the power to tax.

"What the President is required to do," says Attorney General Sargent, "is simply in execution of the act of Congress. He is merely the agent of the law-making department to ascertain the facts prescribed by Congress and declare the event upon which its expressed will is to take effect. The statute invests the President with no discretion of judgment in proclaiming the duty, but authorizes him to proclaim only the duty shown by a prescribed state of things or as shown by certain facts legislatively described."

Movement Under Way for Repeal

It is held by the Department of Justice that the contention that the statute provides for a levy for trade advantage to particular citizens, and is, therefore, not a tax levied for the common defense and general welfare, is without merit. "It might be contended with equal reason that every outiable provision in a protective tariff act is designed to provide a levy for the trade advantage of a particular citizen or group of citizens. It is a matter of public history that many of our tariff acts, including the present one, have been affirmed on the underlying policy of protection."

It is indicated by a movement already under way that an attempt will be made in the next session of Congress, to secure the repeal of the flexible provision of the tariff act.

State Claims Interest in Muscle Shoals

A new angle has arisen in the controversy over the disposal of the nitrate and power plants at Muscle Shoals. At a conference held between officials of the Departments of War and Justice and a commission representing the state of Alabama, the latter contended that the United States has no constitutional right to manufacture and sell for commercial purposes electrical power generated at Muscle Shoals. It was admitted that the government of the United States can generate electrical power for its own use and sell enough of it to pay for the upkeep of the project and to return to the government a sufficient amount to pay for the original cost of the project but if there should be sold electrical energy in excess of the foregoing requirements and necessities that the state of Alabama has an equitable interest in such excess sold.

The representatives of Alabama claim that the Tennessee River, on which the Muscle Shoals project is located, is a navigable stream and that Alabama holds in trust the title to the bed of the river at Muscle Shoals for the people of the state. They maintain that the power could be used by the Federal government in the production of nitrates and other fertilizers and munitions of war.

Will Make Pig Census

Rural mail carriers are assisting the Department of Agriculture in conducting this year's spring pig crop survey. Officials in the Department of Agriculture say that previous pig censuses conducted with the assistance of rural carriers have resulted in more accurate figures for marketing forecasts than the department has been able to obtain from other sources.

Immediate Relief Needed

The entire nation is asked by Secretary of Commerce Herbert Hoover to aid in the task of providing relief for the 600,000 victims of the Mississippi Valley flood. He says that 600,000 of the 700,000 homeless are destitute and need immediate aid. Present rehabilitation means giving the people seed, clothing, a stock of food and feed, shelter and household goods, and sufficient animals and implements to enable them to produce crops this season.

Are Farmers too Efficient?

The Department of Commerce has found that in the annual production of manufactured commodities valued at $60,000,000,000, the average waste has been 49 per cent. In six standard industries there was a waste of 50 per cent in materials, labor, power and human energy.

According to an investigation made by the statisticians of the Department of Agriculture the per capita production of industrial workers in the United States has been increased 66 per cent. During the same period the per capita production of farm workers has increased 100 per cent.

In view of these figures a Department of Agriculture specialist says that the old claim that industry prospers while farmers are in distress because industry is efficient, is far from the truth. He suggests that possibly one of the causes of farm distress is that the farmers have been too efficient for their own good. If efficiency is the cause of the perennial surpluses that bear down farm prices below cost of production, then it is evident that his conclusions are well founded.—E. E. R.

FIELD FORCES MOVE

State Department Will Keep in Touch with County Bureaus—Fisher to Make Tour—New Laws Become Effective.

Harrisburg, Pa.

REORGANIZATION of the field forces of the State Department of Agriculture is moving rapidly and in addition to the formation of the groups to fight the corn borer and the Japanese beetle appointments have been made of field agents, veterinarians and others. The changes have come gradually and as speedily as possible men have been sent into the field, while according to what is heard on Capitol Hill the operations are being more closely allied with county bureaus in certain lines and active cooperation with State College is under way. Plans are being made by Secretary Charles G. Jordan and other officials to visit many parts of the state this summer and contact will be maintained with all field forces by the central office continually.

Governor Plans Tours

Arrangements being made for the tours Governor Fisher has in mind this summer call for visits to state institutions and to such regions as are notable for products. The Governor does not contemplate going to gatherings, but will make his swing around mainly to see what is being done at the state's various hospitals and the like and note conditions in outstanding farming sections. For some time studies have been under way as to cost per person of state institutions and how state aided hospitals are maintained. These will be the bases of some of the gubernatorial inquiries.

The Deer Problem

Indications are some sections of the state are going to have trouble with deer raiding gardens and orchards this summer and already reports have come here of animals looking over prospects. State Game authorities are inclined to be liberal in regard to shooting of animals, but to be rigorous on proofs. The policy of the state administration will be to get all data possible on depredations of animals and take up bad situations as they arise.

New Acts Go into Effect

Numerous laws passed by the last legislature became operative on June 1, including some dealing with agricultural matters and townships. The new traffic code is being digested and boiled down information as to its requirements will be made available during the summer. Millions of dollars for aid in road construction or improvement became available for requisition or "matching" by counties on that day.

More Arrests Made

The act of 1925 punishing people tearing up plants on farms or the like has again been upheld. Arrests made under it in central counties have been followed by convictions and imposition of stiff fines. In addition arrests have been made for taking of young trees from alongside roads and instances of fines for raiding flowering trees have been reported.

Corn Planting Delayed

According to reports to the State Department of Agriculture weather conditions have made everything late this year and kept down the forest fire record to a most unusual state. In some central sections corn planting has been extremely late.

Warn Wheat Growers

Some rather startling figures are being made public at the State Capitol on the loss to Pennsylvania wheat growers because of wheat being afflicted with too much garlic and other nuisances. Where requested men from the Department of Agriculture have been giving advice on methods of elimination of the garlic.

Start Farm Census Promptly

All plans have been made for starting the census of Pennsylvania farms promptly this year so that the data can be available as early as possible. Federal authorities have been showing an interest in what is being turned up. The recent statement showing percentage of various crops in the farming of various counties has been read widely.—T. C.

VIE FOR PRIZES

Entries Being Selected for Horseshoe Pitching Contest at Annual Picnic—Markets Now on Summer Schedule.

Trenton, N. J.

THE state-wide annual picnic of the New Jersey Federation of County Boards of Agriculture and the New Jersey State Grange is scheduled for High Point Park in Sussex County on July 29th. The interest in horseshoe pitching developed at last year's picnic in Bridgeton has made horseshoe pitching a permanent feature of this annual event. Early indications point to representatives from all counties in the state, with the exception of Hudson and Bergen, who will compete for cash prizes and honors this year. Single entries only will be accepted in the contest and two entries from each county must be entered, one to act as scorer while the other pitches. Horseshoes will be restricted to the standard size of two and a half pounds weight. Elimination contests are now being scheduled thruout the state in the various counties, to decide upon the official contestant in the state-wide contest.

Farmers' Markets Opened

Trenton opened on June 1 on regular summer schedule its four farmers' markets and patronage has started in briskly. Outside of the marketers occupying fruit stands, all persons taking space on the markets are bona fide farmers. The Wharf and East Trenton markets have been opened every Friday night during the winter and spring, and increasing supplies of green vegetables called for the markets to be opened three nights a week during May. From now on all the markets will be doing business every night except Sunday.

Hunterdon County Notes

The Executive Committee of the Hunterdon County Board of Agriculture at its last meeting decided to cooperate with local county Granges in putting on a non-competitive exhibit at the Flemington Fair this August. The fair association will furnish the tent to take care of the exhibit. The County Board will contribute to the fund being raised to send outstanding club members to Washington for the National Club Encampment. A series of poultry meetings with large attendance is being held thruout the county, such subjects as care of the baby chicks and sanitation in the poultry yards being discussed.

Produce Widely Distributed

Records now available on the carlot shipment of fruits and vegetables from New Jersey last year show that New Jersey producers sent 17,755 cars of truck outside of the state. Shipments were made into 53 cities in all states east of the Mississippi River. New York took 1529 cars, the largest amount. Pittsburgh was next with 552 cars, Philadelphia third with 515 cars. The railroads carried 4728 cars of potatoes, 1000 cars of peppers, 2000 of tomatoes, 1135 of peaches, 746 of cranberries, 1586 of sweet potatoes and 7000 of other fruits and vegetables, and this despite the increasing competition of trucks which took the equivalent of some thousands of cars directly to nearby markets.—W. H. B.

PLANT SCHOOL FOREST

Pupils Set 10,000 Trees in Allegany County—Study Apple Situation—Home Bureau Numbers Increase.

Ithaca, N. Y.

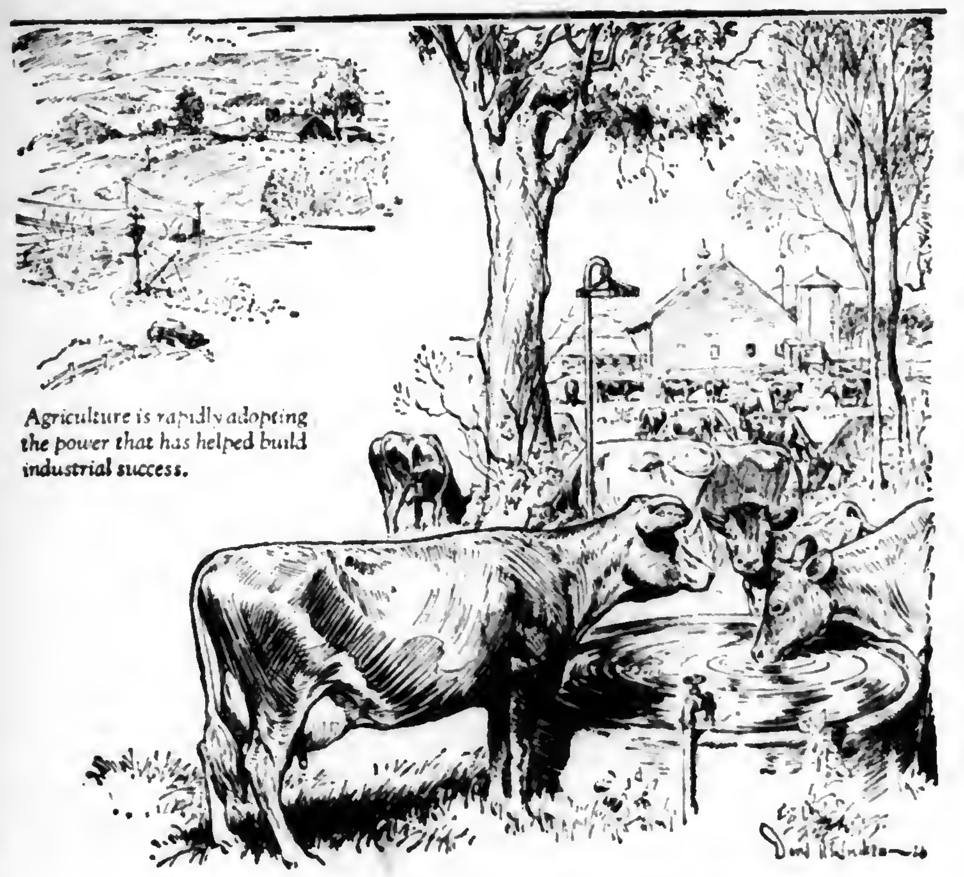
ON MAY 6 the school children of Friendship, Allegany County, began the planting of a school forest, the first in this county, for which 65 acres of land have been purchased. The business men of the village donated the land and the Chamber of Commerce and the Parent-Teacher Association participated in the exercises at the starting of the forest. The 400 pupils planted 10,000 trees in a few hours, after which there were dedicatory exercises and a basket picnic. Prof. J. A. Cope, of the State College at Cornell, supervised the work and gave an address. There are several such forests in the state, the largest being the Watson School forest, where the pupils are planting 10,000 trees a year on a 94-acre tract. The work will be completed in 1930. The forest at maturity will yield a revenue that will support the school in part or in whole.

Will Make Apple Survey

The apple situation is so serious in this state that the Bureau of Economics of the United States Department of Agriculture is making a survey of the situation in an effort to learn what varieties are now being grown and the acreage of old and new plantings with a view to recommendations. The Farm Bureau is cooperating.

Membership Exceeds Last Year

The Home Bureau membership for 1927 on March 1 had passed last year's total, with 23,802 members. Erie County leads with 1209 members, and St. Lawrence County, which is almost entirely rural, second with 1034 members. Of the total state membership, 20,172 are rural women. Ten Home Bureaus will exhibit at the state fair with fourteen applying for space. Their exhibits are pronounced the most educational and most interesting of any at the fair.—M. G. F.



Agriculture is rapidly adopting the power that has helped build industrial success.

The electrical industry brings forty years' experience to the farm

NO LONGER is rural electrification only "a possibility." The building of rural lines is in active progress; and the policy of electric light and power companies is to extend rural service as fast as circumstances will permit.

The electrical industry is applying the experience of forty years of service to cities and industry to the problem of delivering electric service to farms. Where the demand is sufficient to justify the building of lines on a business basis, farmers are having no trouble getting service. For, to derive the full benefit of rural electrification, the varied use of power as well as light must be applied.

Only through cooperation between the producers and the consumers—light and power companies and the farmers—can rural electrification be brought about. The farmer should take advantage of the great variety of things electricity can do. The industry, meanwhile, is working with representatives of farmers in twenty states to devise new equipment and improve that now in use.

The benefits of electricity which are now enjoyed on 260,000 farms will be extended to hundreds of thousands of progressive farms within the next few years. Ask your power company for information and cooperation.

The Committee on Relation of Electricity to Agriculture is composed of economists and engineers representing the U. S. Departments of Agriculture, Commerce and the Interior, American Farm Bureau Federation, National Grange, American Society of Agricultural Engineers, Individual Plant Manufacturers, General Federation of Women's Clubs, American Home Economics Association, National Association of Farm Equipment Manufacturers, and the National Electric Light Association.

NESHAMINY GARDENS

WHERE AN EDITOR WORKS AND THINKS
BY R. P. KESTER

OUR family of families sat on our porch on Decoration Day to watch the village parade as it did honor to those who had responded to their country's call in past wars. A few aged veterans, lonesome survivors of the Civil War, rode in thoughtful silence at the head, followed by the younger men who did soldier duty in their generations. In their generation! Awful as it is, almost every generation of men has experienced war, when the flower of manhood was called from civil pursuits to give their lives, if need be, in war. I thought of this as the youngest of our two grandsons sat on my lap watching the parade, and the older one stood by, stirred by the flags, the bands and the marching men. Will their generation have to go thru what every preceding age has had to endure? God grant that it shall not be!

✦ ✦ ✦

MEMORIAL DAY was one of the finest days we have had this spring. But in spite of this our families spent it as a holiday, except cutting and marketing the asparagus and some spinach, and attending the chicks. One wants nice weather for visiting and loafing to enjoy them best. Sunshine and balmy winds are necessary to the fullest enjoyment of idleness and laziness. James Whitcomb Riley summed it up right in "June." While we did not have clover blossoms to lie in, we had chicken and waffles for dinner and our first ripe strawberries for supper. Anyway, if that is the only day of fine weather we are to have it would not have been worth while to spend it in working.

✦ ✦ ✦

CROPS which have to depend upon soil nitrogen in organic form are having a hard time to get started this spring. The bacteria which transform organic material into plant food can work only when the soil is warm, and the cold and dampness have kept the soil temperature too low for them so far. The ready availability of nitrate of soda is easily seen where it is applied this spring.

✦ ✦ ✦

I USED to believe, because I was told, that cutworms need be feared only when a crop is planted on sod land. I know better now. Our tomato and cabbage plants were set on land that has not been in sod for three years, yet the cutworms are numerous and hungry. They have cut off a great many plants. The cool, cloudy weather is just to their liking. I never have been able to figure out where, in the economy of nature, they have any useful or redeeming qualities. In a field of plants they work as would a man who goes into a forest and cuts down trees for wood and uses only the chips acquired in the cutting down of the trees. Why don't they eat the whole of a plant?

✦ ✦ ✦

MY PLAINT about previous failure to get black raspberry plants which were free of disease has brought a lot of helpful information. There are several individuals and nurseries in Pennsylvania growing plants which inspection shows, are not infected with raspberry diseases. One old gentleman in a west central county is the originator of a berry which he claims has excellent qualities. He sent me a dozen plants to try them out. These were set in a new, clean place and we shall watch their performance with interest.

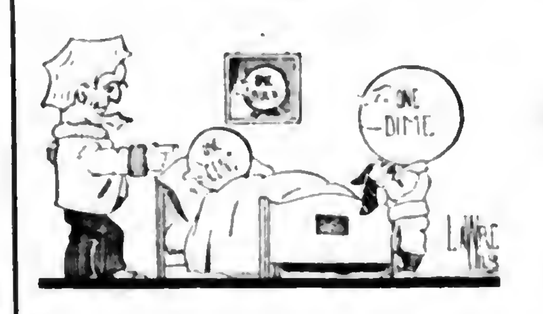
✦ ✦ ✦

SOMEONE asks, "What is the outlook for farmers for 1927?" Frankly, I have no definite idea. Reports from nearly every section of the country indicate unfavorable weather for planting, cultivating and growth of crops. Grass and wheat are doing fairly well, but spring-planted crops are late and at a standstill. Too soon yet for discouragement, but there is no basis for unalloyed optimism. Frosts, floods and cool cloudy weather are not harbingers of a bountiful harvest.

Ties Up Tongue Traffic

Professor—What is the most common impediment in the speech of American people?

Freshman—Chewing gum.—Northwestern Purple Parrot.



The Cheerful Plowman

Don't Have Idle Money

DON'T let your pennies lie around if you would have them grow,—an idle penny, I have found, takes on no flesh, you know! A penny's but a baby coin and tiny at the start, it's tiny in its bone and loin and tiny in its heart! Like human babies exercise is needed every day, a chance to kick and blink the eyes, a chance to roll and play!

With proper kind of play and kick a penny very soon becomes a nickel, round and thick, and shining as the moon! A nickel trained to industry in time becomes a dime; a busy dime will grow to be a quarter, every time! A quarter that applies itself soon takes on added weight, and soon becomes an honest pelf half-dollar, sure as fate! A half a dollar will become a dollar if it tries! A dollar may, by hustling some, attain to any size!

A miser takes each baby cent and puts the thing to bed; he forces it to dull content, to be a sleepy head! A miser's penny never grows because it doesn't toil. It's like the blossom of a rose that's merely done in oil! A miser must accumulate by saving, that alone; his money never takes on weight thru efforts of its own! So I decided long ago each penny that I earned should move around and try to grow, it should not be interned; it should not be allowed to sleep while I was at the mill, but it should try to romp and creep, and grow to be a bill!
—J. Edw. Tufft.

Friendly Talks

By EDGAR L. VINCENT

I HAVE about made up my mind that things do not happen in this world. Whatever comes is in direct accordance with that old statement of the long ago, "Whatsoever a man soweth, that shall he also reap."

The other day I saw a sign nailed to a tree by the side of the road. "Auction." That was the way it began and then followed a long list of things that would be sold on a certain day. Mowers, wagons, all sorts of farm tools; and at the bottom in the biggest letters of all, "THIS FARM FOR SALE."

Such a sign always makes me feel bad. It seems so much like the death knell of hope. As I looked at the bill and then let my eyes turn away to take in the farm and its surroundings, I could not help thinking how many times as I had been passing that place I had noticed all sorts of farm machinery lying about, sometimes with the rain beating down upon it and always losing paint and gathering rust. I know it is hard work sometimes to find a moment to spare on the farm.

We Can Find a Place for Everything

And yet, days are rare when we cannot if we will, find time to get our tools under cover. Sometimes our barn room is short, too, but we can always tuck one more thing away if we really set out about it. And thinking of these things, and putting one thing with another the thought came to me, "It may be that sign on the tree never would have been there if the owner of the farm had been a little more careful with his tools and carried the same attention to details in other things."

So many times sowing costly tools in the fence corner leads to reaping auction bills nailed to the tree. Of course, there are many exceptions to this rule. I know that. Sickness does come to us all. Then we cannot do as we otherwise would. Help may be scarce, so that we are pushed from daylight to dark; and that means work that we cannot get around to do. I am always sorry for men that know what ought to be done but are so driven with their work that human strength fails and they falter under their burdens. But one thing I have noticed, and that is that these men of thrift do not long leave things at loose ends.

We Harvest Only What We Sow

And this thing of sowing and reaping runs straight down thru everything we do. It cannot be otherwise, for this old world is not whirling around haphazardly. God has His laws. And if you and I do not live up to them, so much the worse for us. If we are careless about bringing up our boys and girls, some day there is going to be an awful crop of trouble in our granary. If we do not take heed to our own ways of living, night will come and its shadows will be blacker than midnight.

But I like to think what joy there is in a good sowing; and as I look around the world, I see many a farm home which is a little lighthouse of happiness on the sea of time. No place in the world is better fitted to make folks happy than the farm. True, the work is hard. The weather sometimes blocks us in our planning. But year in and year out, if we live the right life and do the right things, our happiness will be sure and complete. For God's law is true when we turn it around and apply it to good seed sowed in good ground. A hundred fold will surely be the harvest. Who could ask for anything better?

No half-way verdict—Camel is supreme

THE American people have had many favorites. But there's never been a choice like Camel.

Camel is the most popular cigarette this nation ever had. Millions unite to place it first, and there's no comparison. Camel is supreme.

There must be reasons back of such a preference. There must be mountain-high quality in this famous cigarette to make millions join in saying, "I will have only Camel."

That is true. Camel quality is just as supreme as its leadership. In Camel, no substitute has ever been made for quality. No compromise has ever been made with expense. For Camels, the country's largest tobacco organization buys the choicest Turkish and Domestic tobaccos grown. There simply are no better tobaccos or blending.

If you don't yet know that supreme tobacco enjoyment, try Camels. All the taste and fragrance, all the mild and mellow pleasure you ever hoped to find! We invite you to compare them with any cigarette made, regardless of price. *"Have a Camel!"*

LEADCLAD FARM FENCE

HOW LONG DO YOUR FENCES LAST?

The life of your fences depends a lot on where you live. If it's high and dry, your fences naturally last a good many years, but if there is fog or smoke, they soon rust through. Then you probably need a whole new fence every few years.

No matter where you live though, you will find that Leadclad Fence outlasts any wire fence you have ever used. Leadclad Farm Fences are protected from rust by a thick, heavy jacket of pure lead. That's why Leadclad Fences last so much longer.

Put up some Leadclad and see how much longer it will last on your place. The labor and repair expense it saves will be money in your pocket.

Write for our new catalog and price list. Get the facts about Leadclad and see for yourself.

You will be amazed at what Pyrox Spray will do

BECAUSE Pyrox is no ordinary spray. Nothing else is like it. It is so effective in fighting the natural enemies of plants that they are enabled to put all their energies into growth and big profitable yields.

Pyrox is both an insecticide and a fungicide extra high in copper. It kills bugs, worms and insects, controls fungous diseases and prevents blights that turn the leaves brown or black.

Convenient to use. Five minutes and you're ready to spray. And once sprayed on, Pyrox *sticks*—making frequent sprayings unnecessary.

Use Pyrox for potatoes, tomatoes, cucumbers and other vegetables; grapes, small fruit, roses, shrubs and flowers.

One pound jars; 5 and 10 pound cans; 25 and 50 pound drums; and barrels. Costs much less per pound in the larger containers. For sale everywhere.

Logan Spring Farm

It's Not Too Soon to Prepare the Soil for Next Year's Plant Growing

AS PLANT growing under glass comes to an end for this year it is not too soon to give thought to the matter of soil for use under glass during late winter and early spring of next year. Almost every established gardener has his own particular ways of meeting this problem. In some cases where plants are grown in solid beds, the same soil is used year after year with the addition of rotten manure or leaf mold. Careful sterilization makes this practice comparatively safe. When flats are used or when the plants are taken to the field with sizable balls of soil adhering to the roots, large quantities of soil are required for replacement.

A few gardeners are fortunate enough to have suitable natural accumulations of sand, silt and leaf mold which streams have deposited. Sometimes this material is of the finest character. Again it may carry excessive amounts of weed seeds, may introduce new weeds or diseases. Along some of our streams the degree of pollution has become so great that such soil sometimes contains sufficient impurities to injure plants. I had exactly this experience this spring. Liming of such soil together with frequent turning over a period of several months may eliminate injurious effects.

Field Soil Is Lacking

Rarely soil may be taken from the field and will prove satisfactory but in most cases it will lack enough organic matter to retain good physical conditions under repeated waterings. A modification of this idea is to set aside an area, apply large amounts of suitable manure, lime thoroly and plow frequently. Green manurial crops may also be incorporated into this soil. On heavy types sand is sometimes applied. A very good plant-growing soil may be built up in this way.

The compost pile is an old standby in preparing soil for plant growing and should be started in ample time. The proportion of the various materials used will vary with what is available and the nature of the soil. In the case of a sandy loam alternate layers of equal thickness of soil and manure, that is before settling, along with liberal amounts of ground lime stone and pulverized bone usually make a good plant growing soil. Preparations may be varied as experience dictates. Piles including sods where those are available usually prove good. It is important that diseased plant refuse never be used. To decompose rapidly the compost heap should be kept moist but not wet and soggy.

Make a mental note, or one on the calendar, to store in the dry an ample supply of the material early in the fall before wet weather comes along or the pressure of other work and the approach of freezing weather causes one to delay too long.

Seedlings Should Be Thinned Now

The season for thinning many kinds of seedlings is now at hand. This is not only important but should be done promptly to secure early returns and avoid excessive shock to the plants which are to be left. It is a job that is easily slighted or put off. It pays in a number of ways with such crops as parsnips, beets, carrots, lettuce, kohl-rabi, cucumbers, melons and squashes.

When each plant is provided sufficient space, growth is more rapid, sizes are more even and better shaped specimens are produced. Moreover, the crop is harvested during a shorter period, decreasing the labor of harvesting and increasing the opportunity for succession crops.

A good hand weeder of the variety with the blade set at an angle to the handle shortens the job. It is a common mistake to leave too many cucumber, melon and squash plants in the hill. Ideas vary but two or three is usually sufficient.

On the medium and heavier soils frequent showers may reduce greatly the time during which the soil can be worked. It becomes very easy to fall behind schedule. Weeds develop more rapidly. When it begins to dry off we are justified in being very watchful in order to get on the land at the earliest possible moment. Sometimes a few hours spent at planting or weeding between showers may enable us to keep our work up to date.

The Weeds Stay on the Job

During the whole growing season, especially in the month of June, daily tours of inspection of our gardens are almost essential to the best management. Cultivation, especially of small seedlings, is better and more easily done when the soil is at just the right degree of moisture. Tiny weeds if unobserved soon develop a powerful attack, sometimes become uncontrollable without a disastrous expenditure of labor. Inroads of disease may be reduced by prompt detection. Insect attacks are more easily controlled at the start.

By way of example, I remember a case a few years ago, when a planting of early cucumbers was just cracking the ground on a Sunday. That afternoon my father, another gardener and myself, each walked thru this field and none of us observed any striped beetles. Monday we were hard pressed with harvesting and marketing and it was shortly after noon when I again inspected this planting. Cucumber beetles were there by the millions and only drastic dusting saved the seedlings as the pests burrowed into the cracked ground in search of the shoots which had not yet come to light. Another day without protection and the stand would have been lost.

Crops Reach the Peak Quickly

During June crops which have been lagging along develop surprisingly fast under the stimulation of higher temperatures and longer sunlight. Radishes, spinach, lettuce, strawberries, peas, beans, all come into market condition with a rush pass their prime and lose quality almost as quickly.

Vigilance is required to catch each crop at its best. Moreover close observation will help us to estimate in advance the probable date of maturity and advise our customers well before hand of what they may expect from us. This is the very best form of advertising. The circus does little advertising on circus day. Money is spent weeks beforehand that folks may have had time to make up their minds to see that particular circus when it arrives. G. S. W.

Head of the Department of Dairy Husbandry
Pennsylvania State College

Juniata C.T.A. Ends Fourth Year with 17 Honor Herds

Editors' Note—This is one of a series of annual reports of Pennsylvania cow testing associations. As each association completes its fiscal year a summary of its records is published in this department. The owners of herds with a 300-pound butterfat average, whose names appear at the end of the report, will be awarded [illegible] by the Pennsylvania Dairymen's Association at the 1928 State Farm Products Show.

THE Juniata Cow Testing Association finished its fourth year April 1, 1927, with 26 whole-year members. There were 355 cows in the association during all or part of the year.

The result for the four year's testing is as follows:

Year	Avge. no. cows	Lbs. milk	Lbs. butterfat
1924	278.00	8860	303.4
1925	260.66	8672	304.7
1926	294.16	8927	309.1
1927	290.76	9000	310.1

The results for the members are as follows:

Total average number of cows in the association	290.76
Avge. per cow lbs. of milk	9000
Pounds of butterfat	310.1
Percentage of butterfat	3.4
Value of product	$214.28
Cost of pasture	15.21
Cost of roughage	32.07
Cost of grain	49.67
Total cost of feed	96.95
Value of product above feed cost	117.33
Returns for $1 expended for feed	2.21

Following is a grouping of all cows producing over 300 pounds of butterfat.

Above 500 lbs. butterfat, 5 cows; between 400 and 500 lbs. butterfat, 29 cows; between 300 and 400 lbs. butterfat, 97 cows.

Thirty-four cows produced over 400 lbs. butterfat during the year.

Cow tester in charge, Isaac S. Reist, County Agent, D. R. Pheasant, summary compiled by I. O. Sidelmann.

Seventeen herds with an average of five or more cows exceeded an average production of 300 pounds of butterfat. A complete list of these herds follows:

Owner	Avge. no. cows.	Breed	Pounds milk	Pounds fat.
E. J. Cunningham, Mifflintown	12.58	R. & G. H.	12.642	439.0
C. I. Degen & Son, Mifflintown	8.75	R. & G. H.	10,836	383.7

G. Lloyd Heckman, Mifflintown	8.00	R. & G. H.	10,055	303.8

New Jersey Dairymen Plan for Field Day

THERE will be a special program for dairymen and breeders on the annual Field Day of the New Jersey State College of Agriculture which is to be held on June 15 at New Brunswick.

In addition to talks by several authorities on dairy and livestock management there will be an inspection of the college herds. Visitors are invited by the college to ask questions regarding their own animals.

Prof. A. R. Merrill, specialist in dairy husbandry at the Connecticut Agricultural College, is to talk on "New Facts in Herd Improvement." Numerous favorable reports of Professor Merrill's work led the college to ask him to relate his experiences to New Jerseymen.

Methods used in breeding and feeding to produce a number of high record cows in the college's own experimental herd will be described by J. W. Bartlett, in charge of the dairy department. The college herd has produced two world record animals in the last two years. One of these as a seven-year-old produced 21,136 pounds of milk in 305 days. Visitors will have an opportunity to see her when the leading animals are paraded at the conclusion of the talks.

"Sheep for New Jersey Farms" is the subject of a talk to be given by W. B. Connell, extension professor of animal husbandry at Pennsylvania State College. Professor Connell will describe the conditions found necessary for successful sheep raising and point out some of the advantages of the industry.

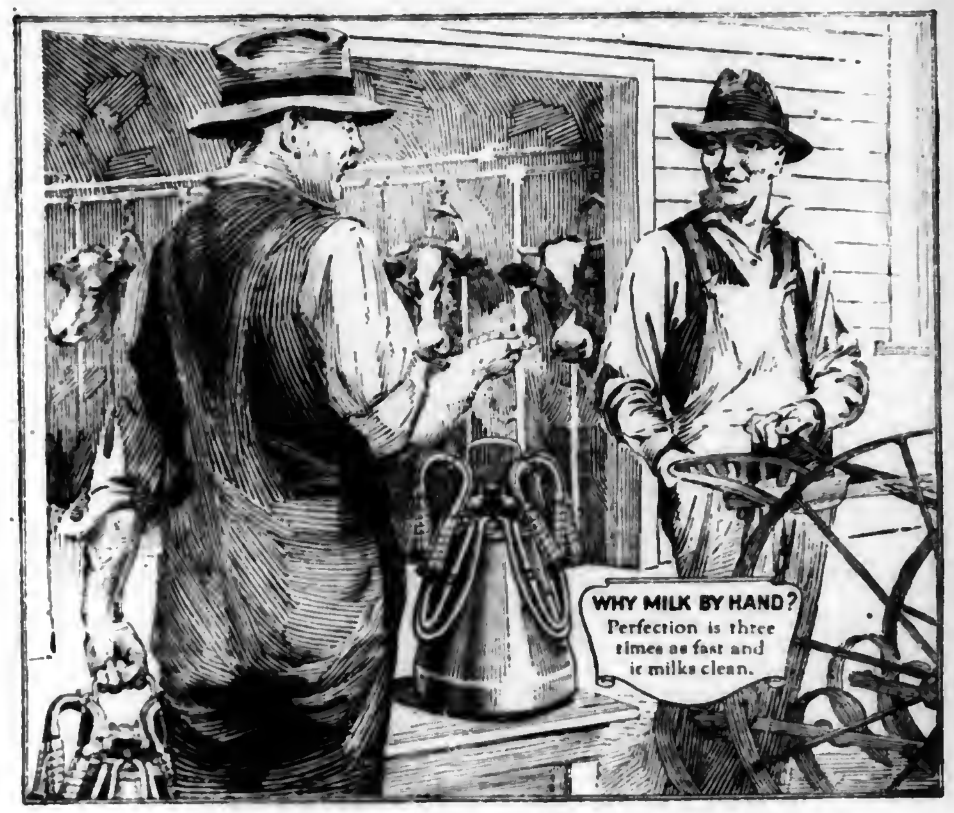
C. B. Bender, assistant dairy husbandman at the college, is scheduled to tell about the results of his experiments in calf feeding. Professor Bender has had various feeds and methods under test in New Jersey for five years.

Besides the inspection of the dairy herds, visitors will be shown the sheep and swine. Prof. W. C. Skelley, assistant animal husbandman at the college, will be in charge.

Turn Cistern Into Silo

I have a cistern 12 by 8 feet that has a concrete bottom and sides. Could it be made into a silo by putting up a frame of lumber to make it larger and air tight? If so, should the bottom be taken out? I have heard that concrete poisons cows. Please advise me what to do—F. J. S., Perry County, Pa.

Your cistern, which is 12 feet high and 8 feet wide, will do very nicely for the base of your silo. The idea that concrete will poison cows is an absolute mistake. In fact, most silos are erected with a concrete base. You will, therefore, run no risk whatever in using a cistern as a foundation for the silo.—A. A. Borland.



WHY MILK BY HAND?
Perfection is three times as fast and it milks clean.

Perfection Saves Time When Time Is Money

HAVEN'T you often wished to be in the field an hour sooner or stay an hour longer? Yet at busy times, as always, two or three persons must drop their other work for milking.

This is no longer necessary. With a Perfection Milker, you can have that extra hour every morning and night. One man with the Perfection does the work of three by hand, and does it better. Let the others go on to the field.

When plowing, seeding or harvest is pressing, when extra time is extra dollars, then Perfection saves money for you. Many users say it is indispensable.

As the Perfection saves you time it will make you money. Cows like it better than hand milking and they yield more milk to its natural uniform action. The new sanitary teat cup milks cleaner, faster, with less vacuum; only two parts—simple and easy to wash.

The Perfection Milker puts two extra days into every week for thousands of satisfied users. It pays for itself each year in the saving of wages alone.

Why milk by hand? Write today for your copy of free catalog. Learn how to save valuable time.

The new 2 piece Teat Cup. One pull and it is all apart for quick and easy cleaning.

Perfection Mfg. Co. or Perfection Milker Co., Inc.

What Does Your Child Eat?

The Proper Foods Will Prevent Disease

"TELL me what you eat, and I will tell you what you are," said a wise man, realizing that clear, rosy complexions, strong muscles and firm teeth are the result of good food.

It is pleasanter to give our husbands what they like than to change the food habits formed years ago. But with our children, it is different. We must build their bodies strong for the years to come. We must teach them right food habits, using a food habits score card for this purpose, or making a competitive game out of eating the right foods.

Certain diseases are the result of faulty diet. Right food will prevent these diseases. Right food will cure them. They are: the dietary deficiency diseases, caused by lack of vitamins; goitre caused by lack of food iodin; anemia which can be cured by food iron, and constipation, curable by better choice of foods.

A correct diet gave this child, formerly anemic, his rosy cheeks.

"But we always have plenty on the table!" you exclaim in derision, if I suggest a deficient diet. Yes, you may have plenty so that your child's appetite is always satisfied with tasty food, yet his diet may not be properly balanced.

Your experience probably never will include any of these diseases. Yet knowing of them, you will realize the importance of each food in your child's diet and you will choose wisely. Your baby may be late in cutting his teeth, indicating a calcium deficiency; your school child may have pale cheeks, indicating that he needs more iron; or your little girl may prefer to sit quietly playing dolls or reading, instead of getting the tomboy exercise she needs, indicating that you should give her a diet richer in vitamins. Failure to grow rapidly enough is an indication of the shortage of different vitamins.

May Be Avoided by Change in Habits

It is easy to avoid constipation. Very rarely this is a disease for the doctor to cure. There are occasional cases requiring an operation, but these are so rare that practically every case of constipation, even tho obstinate, can be cured by changing the diet and health habits.

Strained prune juice and orange juice can be given the tiny baby, starting with a small amount, increasing next day if desired results are not obtained. After six months, strained oatmeal gruel, the most laxative of the cereals, may be given. Scraped raw apple, puree of peas, and other strained vegetables, as well as fruit juices should be effective.

The older child may need a large amount of laxative foods, but if effective these are better than giving medicine, unless it is ordered by the doctor. It should not be necessary to dose a well child regularly with laxative medicine, tho in sickness or in emergencies this is essential. Enemas are an emergency measure and should not be used daily in health.

Foods containing organic acids are laxative, as oranges, lemons, limes, grapefruit, apples, tomatoes and other fruits. The lactic acid of buttermilk has a similar effect.

Cellulose Acts as a Broom

Foods containing cellulose, an indigestible part of fruit and vegetables, act as a broom, sweeping waste from the body, stimulating peristalsis in the intestines. Celery, lettuce, spinach, asparagus, rhubarb, figs, dates, prunes and other fruits and vegetables are useful because of their cellulose.

Other indigestible parts of food act in the same way, as bran, skins of baked potatoes, the outer coarse stalks of celery and skins of fruit. Agar agar, purchased at the drug store, can be mixed with bran or with breakfast food, or it can be cooked. It acts as roughage in cases where bran is too irritating.

Hasty Drinks for Hot Days

I FIND it a great economy to have on hand fruit juices ready for a quickly prepared, refreshing drink. Use equal parts water and sugar boiled together into a syrup. Flavor as desired and seal in pint jars. By adding fruit or lemon juice, refreshments may be served on short notice.—M. S. S., Pa.

Salad Dressing Conceals Taste

Butter, vegetable and mineral oils, bacon, cream and olive oil soften the contents of the intestine, making less violent muscle action of the intestine necessary. However, oils taken in excess are apt to upset the digestion, and usually it is not wise to increase their amount in the diet. In some cases where your doctor recommends mineral oil, it can be used in making salad dressing for lettuce, if your child takes it best that way. It can be put into orange juice, a speck of soda added, beating quickly with a fork to make it "fizz," and swallowed quickly.

Some foods produce fermentation, thus preventing constipation. Such foods are cauliflower, cabbage, onions, molasses, honey and yeast. Yeast is a good laxative, but if taken in large amounts the distension from formation of gas may be disagreeable.

Increasing the amount of fruit and vegetables in the diet usually is the best way of combating constipation and is the most desirable since these are foods rich in minerals and vitamins.

The foods which are not laxative are white sugar, cornstarch puddings, white flour, white bread, macaroni, tapioca, farina and white crackers. These foods are devitalized by removing the portion containing mineral matter and are less desirable than brown sugar, brown bread, whole wheat cereals and graham crackers. From every standpoint, these latter foods are better for the well child of three years or older. Boiled milk is not laxative. Cheese, nuts, eggs and meat are concentrated protein foods, and while they are good for muscle building, they should always be accompanied by vegetables.—Doris W. McCray, Iowa.

Is Fitting a Bugbear to You?

THE cost of fitting garments and the loss thru misfits makes up an important part of the $1 billion-dollar annual clothing bill of the United States. Because of the high cost of labor and materials more attention is now being given to reducing this part of the bill. One move in this direction is the recent publication by the United States Department of Agriculture of Farmers' Bulletin 1530-F, Fitting Dresses and Blouses, by Maude Campbell, of the Bureau of Home Economics.

Recent surveys show that women who do their own sewing have more difficulty with altering patterns and fitting garments than with any other part of garment construction. By following the directions that have been worked out much valuable time and material may be saved. Directions are given for fitting dresses and blouses to shoulders, neck, bust, hips and other parts of the body and remedies are suggested for fifty common fitting difficulties. There are also many illustrations showing general lines of the dress, and making plain the methods of alteration for patterns and garments.

Copies of the bulletin may be obtained free on request to the United States Department of Agriculture, Washington, D. C.

An Answer and a Request

ONE of our readers without a name has asked for the recipe for cream puffs, and altho we cannot print all such requests, we shall give this one along with some advice. As many requests do not interest enough of our readers to insure their being published, we ask you please to write your name and address, so that we may answer your need at once and print the call if practical.

CREAM PUFFS

½ cup butter
1 cup boiling water
1 cup flour
4 eggs

Cook together the butter and boiling water. The moment it reaches boiling point add the sifted flour, slowly, stirring all the time. Keep on stirring until the mass resembles a ball and leaves the sides of the pan. Cool slightly, but do not let the mixture become cold. Then add 1 egg and beat hard for five minutes. Add another egg and beat for another five minutes, and so on for the other two eggs. The more thoroly this beating is done the lighter the puffs will be. Drop this mixture into fifteen even portions on a buttered sheet or shallow baking pan. Bake in a moderate oven from 40 to 50 minutes. When cool make an incision in the top or side and fill with sweetened whipped cream or a cooked custard.—G. S. S.

We'll Know You By Your Badge

ARE you fortunate enough to have planned going to the Field Day at the New Jersey State College, New Brunswick, on June 15th? If so, don't forget the get-together of Our Home Page readers which we have arranged for the lunch hour. This is the last time we can remind you, for when your next paper is delivered we shall have had our reception, picnic, heart-to-heart chat, and the inspiration of a state meeting of farm folks.

If you would like to get acquainted with some of the other readers of this page go to Room 36 in the Poultry Building at noon time, carrying your lunch, which can be purchased nearby, with you. Guides will direct you at the grounds. If you will write to the Home Page Editor, Pennsylvania Farmer, 261 S. Third Street, Philadelphia, Pa., we shall be glad to send you a badge to wear so that we may locate each other more easily. Send a self-addressed, stamped envelope with your request and we shall try to give you all latest details of interest concerning the meeting.—Gertrude S. Stewart.

The Canning Season Never Closes

ONE day a friend who was visiting me asked, "When does your canning season close?" I just laughed and said "Never." All summer long we can fruits and vegetables for winter. Thruout the winter, we can apples and meats for summer.

Starting early in June with strawberries and cherries, then early greens, peas and asparagus, it is a fine motto to fill at least one can a day. Before winter makes his first visit, the shelves will be filled, and sometimes double-decked.—Mary Stewart Shuman, Pa.

Note:—We would like to send our leaflet on "Canning Secrets" to every reader who enjoys filling the empty jars. It is free to everyone who sends a self-addressed, stamped envelope with the request. We plan to offer leaflets from month to month and have arranged that all be of uniform size. A book cover in which to compile them may be had for 75 cents.

War on Flies Starts

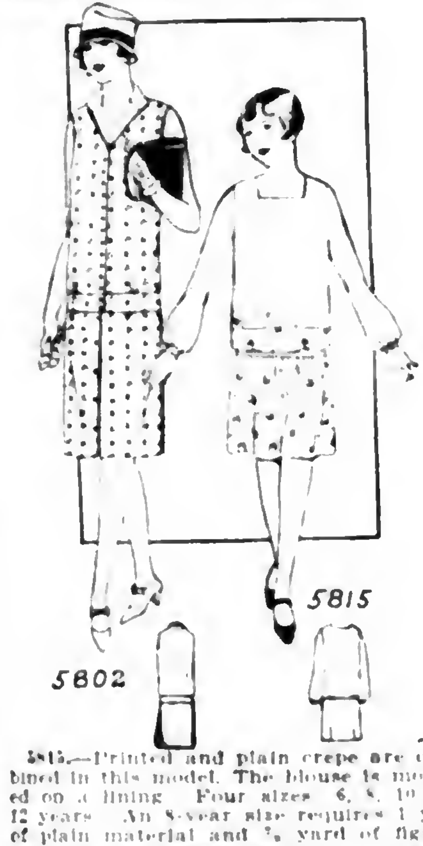
PERHAPS you have been one of those women who kept swatting and swatting flies all summer long and it just seemed that for every one killed, dozens came to the funeral. Something is wrong. Can the pests crawl up the window panes on the outside and enter thru the space between sash and lower panes? Full length screens are best, and solve that difficulty.

The most effective work is to be done outside in the breeding places. Keep all refuse fed up or burned, or, if that is impossible, screen it. Free use of ashes or lime will help to clear spots of decaying matter. Then the repellents and swatters will be more effective.—Mrs. M. C. Smith, Pa.

A Sleeveless Dress for Those Hot Days Now on the Way

Directions for Ordering.—Give figure or figures of each pattern exactly as printed at beginning of each description. Give bust measure when ordering waist patterns, waist measure for skirt, and age for children's patterns. Address Pennsylvania Farmer, 261 S. Third Street, Philadelphia, Pa.

5802.—The sleeveless dress here portrayed is excellent for tub silk, prints, shantung and crepe de chine. Three sizes 16, 18 and 20 years. An 18-year size will require 2½ yards of 40-inch material together with [illegible] yard of contrasting material for facings on the fronts and collar. The lining back will require [illegible] yard of 27-inch material. The width of the dress at the lower edge is 1[illegible] yard with plaits extended. Pattern, 10 cents.



5815.—Printed and plain crepe are combined in this model. The blouse is mounted on a lining. Four sizes 6, 8, 10 and 12 years. An 8-year size requires 1 yard of plain material and [illegible] yard of figured or other contrasting material 40 inches wide, and [illegible] yard of 36-inch lining. Pattern, 10 cents.

Send 10c in silver or stamps for our up-to-date spring and summer 1927 Book of Fashions.

Timely Tips

TO PRESERVE horseradish wash the root thoroly, and scrape off all the brown outside skin. Then run thru a grater. Prepare a mild vinegar, three-quarters water and not over 25 per cent or one-quarter vinegar. Add salt in the proportion one tablespoon to each quart liquid. Strong vinegar will cause the horseradish to turn black. Completely cover the horseradish in bottles with wide mouths. Cork instantly, and seal tight using 2 pounds paraffin to one pound rosin melted together. Thoro sealing and a dark storage place are absolutely necessary.

* * *

To make a magic polisher dissolve one-half cup shredded soap in 1 cup boiling water. Stir in 3 large tablespoons of whiting and a teaspoon of ammonia. Beat this until it is a smooth jelly. Have ready some squares of old flannel. Soak them in the jelly to absorb as much as they will. Squeeze slightly and dry. These cloths are really magic polishers, and a rub will take tarnish off silver and other metals.—A. F.

* * *

Thoreau, one of our celebrated writers and nature lovers, would not have even a doormat on his cabin steps. He thought it much better to wipe his feet off on the sod outside. He had no time to shake the mat. If you and I would clear out a lot of things we have no time to keep clean, our houses would be more sanitary and we might enjoy more moments of real living. Use house cleaning time wisely, and clear the house as well.—G. S. S.

Your "Farm Service" Hardware Man

OUR YOUNG PEOPLE'S FORUM

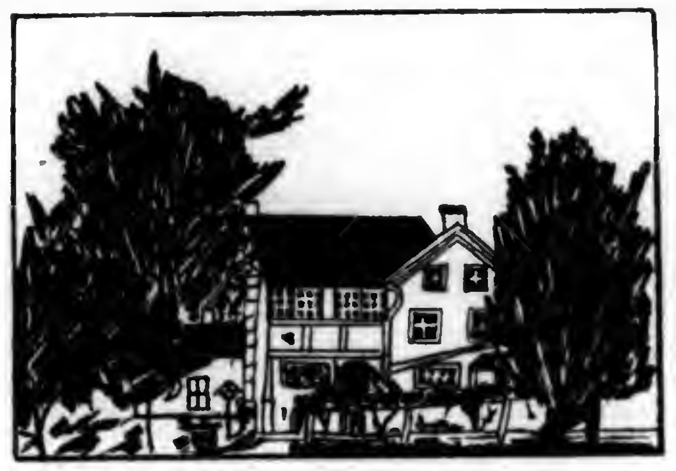
The Contest Drawings and a Welcome

THE contest drawings were perfectly splendid. I've had a hard time selecting the winners. Thanks to all of you who tried to show me some of the things you see around your homes. How I wish I could visit all of you and see the brothers and sisters and pets you tell me about so often.

If this page were only a lot larger you'd see the drawings of all the prize winners this week but as it isn't I'm holding the third prize drawings until next week when I want to use some of those sent in by the Honorable Mention cousins, too.

On the 15th of this month, New Jersey folks are expecting to have a big day at New Brunswick. If any Forum cousins happen to be there with their fathers and mothers I'd be mighty glad to have them come around to Room 36 in the Poultry Building about lunch time to say, "Howdy" to me.

COUSIN RUTH.



First Prize—Group One—Over 12
Thelma L. Miller (X), Franklin County, Pa.

Letters from Forum Members and Friends

Dear Cousin Ruth:—I thank you for my membership pin. I guess I can't enter the drawing contest this time because I can't draw very well. However, I like "Treasure Hunt Contests."

We have two small calves that we are going to raise. They are very pretty. Altogether, we have five cows. I help to milk them and I think it is fun.

We had 500 chicks and sold about 85 on Friday. Last year we raised 85 ducks and later we sold all of them but 21.

I won second prize in spelling at the Franklin County Scholastic Athletic Field Day meet, held on May 4th. I also tried for arithmetic but I didn't get anything. Montgomery Township won in the Class D schools. I am in the sixth grade.—Esther Ryder, (X), Franklin County, Pa.

Prize Winners

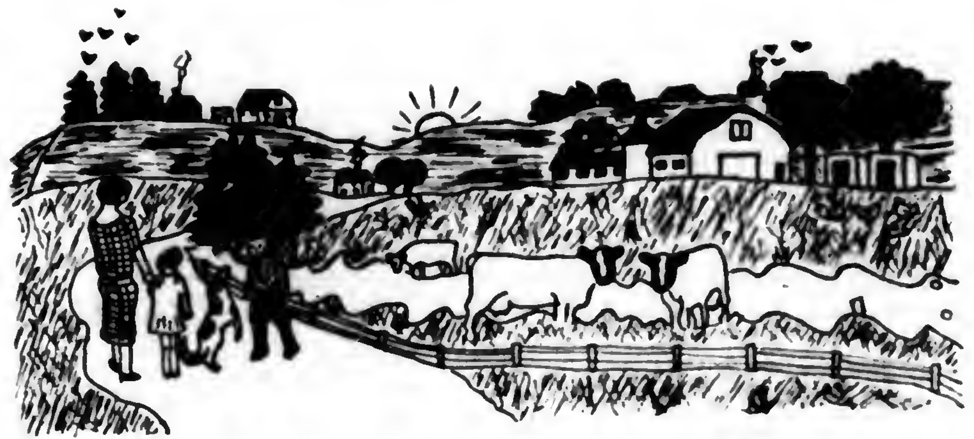
Group One—Over Twelve

1.—Thelma L. Miller (X), Franklin County, Pa.
2.—Edla Jurgensen (X), Hunterdon County, N. J.
3.—Rose Sefcik (X), Washington County, Pa.

Group Two—Twelve and Under

1.—Arch Wager (X), Columbia County, Pa.
2.—Estella M. Bubb (X), York County, Pa.
3.—Marion M. Snyder (X), Susquehanna County, Pa.

Dear Cousin Ruth:—Why do some of the Forum letters date so far back? I sent away and got a lot of flower seed. My father has a big truck and two smaller trucks. We live two or three miles from town and don't keep any livestock but chickens and dogs. We live on a main road and have had two dogs and a cat killed by autos.—Hurdeen John, Lawrence County, Pa.



First Prize—Group Two—12 and Under
Arch Wager (X), Columbia County, Pa.

The reason some of the letters date so far back is just because there isn't room for all the letters I'd like to print when I receive them so I keep them and as soon as I can find room in they go.

COUSIN RUTH.

Dear Cousin Ruth and Forum Friends:—I received my pin. I thank you very much for it. I would have written sooner but I was taking my final tests. I passed from the fifth grade to the sixth and I got high marks.

I received a seal from the government to put on my certificate for attending school every day and not being late. We had a picnic the last day and the Home and School League treated all of us to ice cream.

Our teacher left for Elizabethtown that afternoon to go to college for six weeks and she is coming back next year. We all like her very much.—Pearl Griffith, (X), Chester County, Pa.

Honorable Mention

Group One—Over Twelve

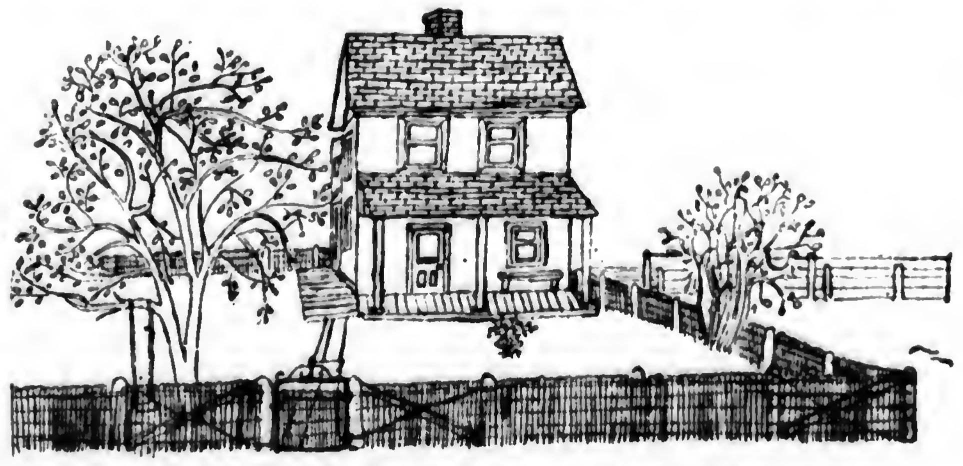
Verda [illegible] (X), [illegible] County, Pa.
Ruth V. Haugh (X), York County, Pa.
Beulah Herrold (X), Snyder County, Pa.
[illegible] (X), [illegible] County, Pa.
[illegible] (X), Adams County, Pa.
[illegible] (X), Adams County, Pa.
[illegible] (X), Adams County, Pa.
[illegible] (X), Chester County, Pa.

Group Two—Twelve and Under

Marian L. Sa[illegible] (X), Lancaster County, Pa.
Hester Sowers (X), Adams County, Pa.

I used to go to school in West Chester, too, Pearl. I played baseball and spun tops in those days. We had lots of fun.

COUSIN RUTH.



Second Prize—Group Two—12 and Under
Estella M. Bubb (X), York County, Pa.

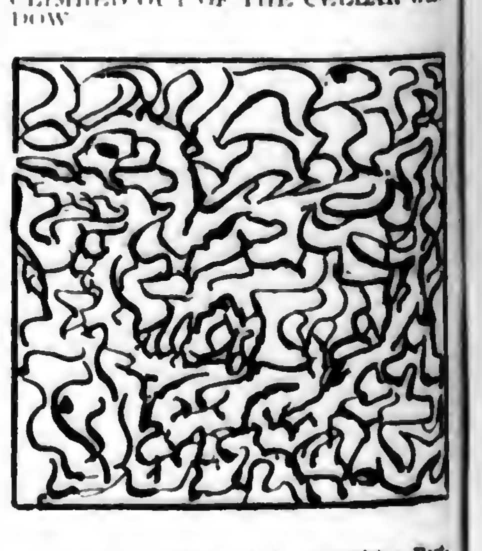
OUR LITTLE FOLKS' PUZZLE CORNER

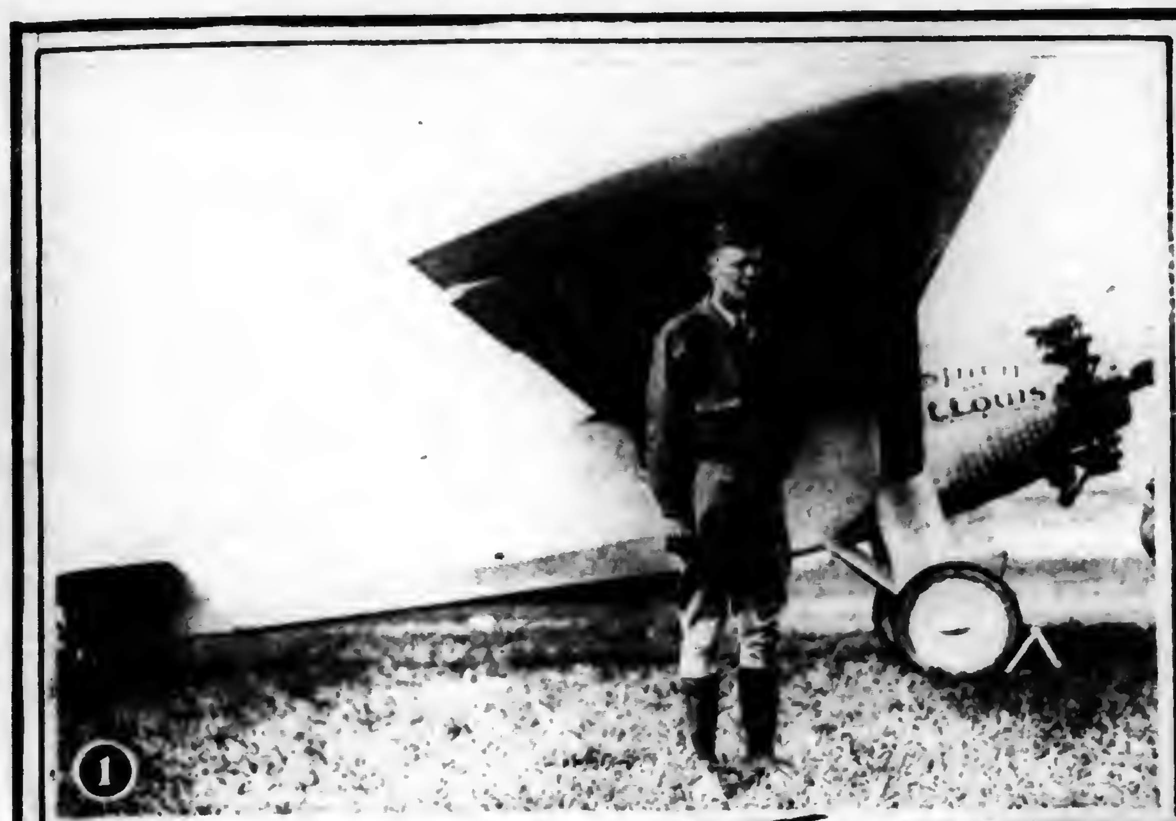
DEAR LITTLE FOLKS—Do you just naturally like to roam around and see where you'll come out, enjoying the queer spots you may come across and going straight on to the many interesting things that may happen? Probably you would get more or less lost if you wandered about some of the big department stores in the city, and surely I might not know which way to turn if you led me into your own favorite woods. But in this week's puzzle all you have to do is to begin at the opening in the square on the left-hand side, not so very far from the top, and by the time you have drawn a line on thru the maze until you come out at the same spot you will have the picture of an animal you see on many farms. It would be a good idea to draw lightly at first, so that if you wander from the right path you will not have trouble trying to tell which lines belong in the picture you are drawing. When you are sure that you have found your way around (of course, you mustn't draw thru any of the black lines I have made in this maze—just find the little path which will bring you out safe and sound) —well, then you might make your drawing a little heavier so that you can see what it is you have drawn. If you want to, you may copy the little animal on another piece of paper, or you can send in the little square below. Let me have your drawing (and you might tell me what animal you think it is) by June 18th. BE SURE TO TELL ME HOW OLD YOU ARE, IN WHAT COUNTY YOU LIVE AND WHEN YOUR BIRTHDAY COMES. The prizes go to the ten children sending in the correct answer whose letters (or postals) are the best in grammar, spelling, punctuation, penmanship and general appearance. Address all puzzle answers to The Puzzle Editor, Pennsylvania Farmer, 261 South Third Street, Philadelphia, Pa.

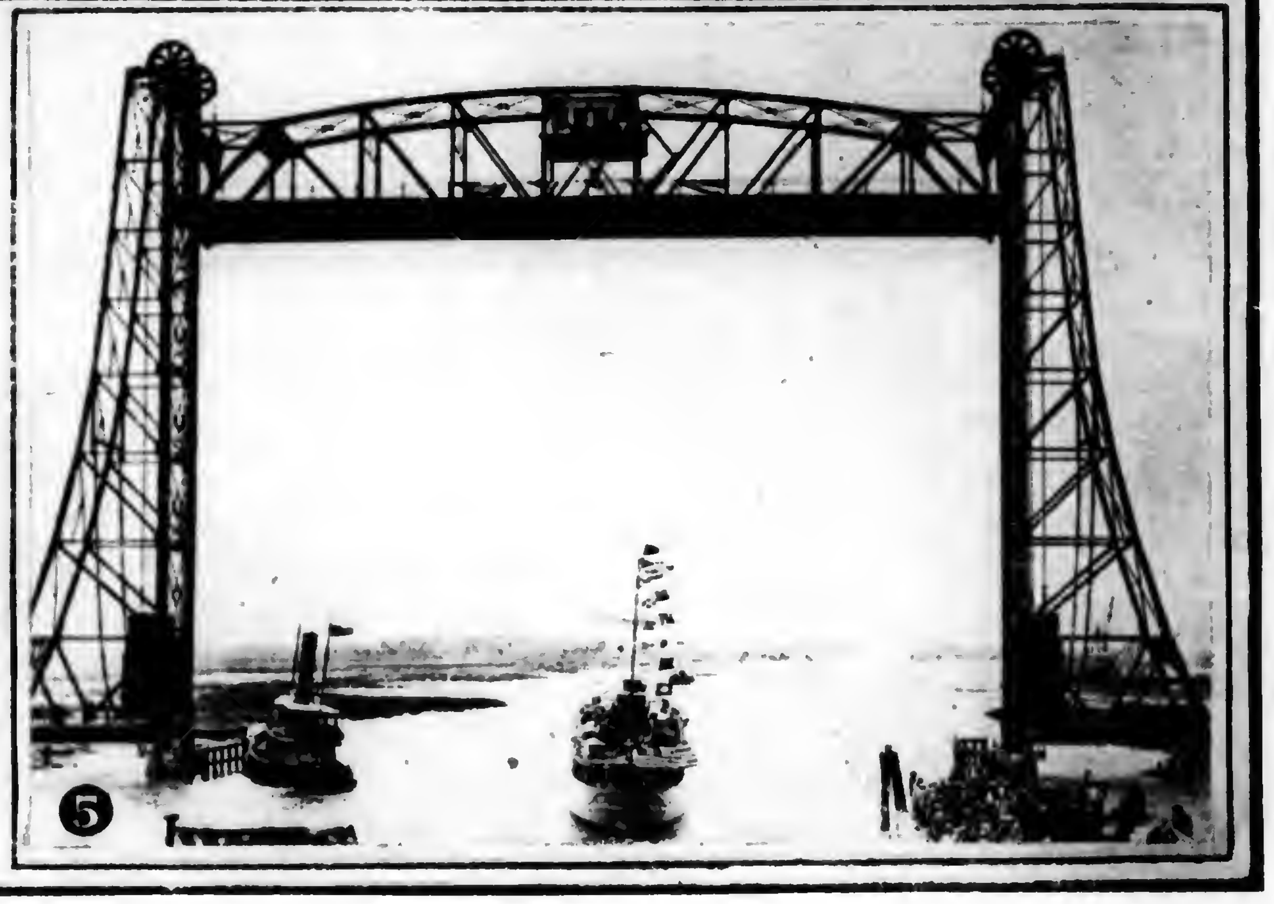
The answer to the puzzle about the man who climbed out of the window of the skyscraper (in the May 21 issue) is: HE CLIMBED OUT OF THE CELLAR WINDOW.



The prize winners are: **Josephine Bertovich**, age 11, Masontown, Pa.; **Kathleen** Davis, age 12, Burlington, N. J.; **Mary** Dively, age 12, Bedford, Pa.; **Shelby K.** Duvall, age 9, Coal Center, Pa.; **Martha** Hess, age 12, Wapwallopen, Pa.; **Walter** Kaluzny, age 11, Greensboro, Pa.; **Frances** McIntire, age 11, Dayton, Pa.; **Willis** Spalding, age 10, Troy, Pa.; **Helen Wood,** age 12, Lloyd, Pa.; James **Claire Wood,** age 10, Curry, Pa.

PASSING EVENTS IN PICTURES





(Copyrights by Underwood and Underwood)

1.—Captain Lindbergh with his plane, "The Spirit of St. Louis," in which he made his remarkable New York to Paris non-stop flight. After being feted in France, Belgium and England, he is on his way back to the United States where other honors await him.

2.—"The prettiest debutante in Washington society," Miss Jane Kendall, and her fiance, George Grant Mason, of New York City, at the National Whippet Races.

3.—Eight University of Southern California students are preparing for an intercollegiate fencing competition.

4.—Edgar Prochnik, ready for a costume party in his pirate's suit, is the interesting son of the Austrian Minister to the United States.

5.—The $10,000,000 Chesapeake and Delaware sea level canal, linking the Delaware River with Chesapeake Bay, was formally opened to commerce on May 16 by President Coolidge. When he pushed a button in Washington the bridge at Reedy Point, which connects the two bays, lifted to allow fifty ships to pass thru.

Cherry Valley

By Katherine Mayo

COPYRIGHT 1918 BY KATHERINE MAYO

THIS was early in the Force's history—so early that as yet no sub-station of State Police had ever been planted in Washington County.

Captain Pitcher, commanding "A" Troop, was now about to place one there, and, in reviewing the territory, had selected Burgettstown as the location for the new outpost. Burgettstown, close to the Ohio line, lies some sixty miles from the Troop's home barracks.

Sergeant Charles Jacobs, late Third United States Cavalry, Private Gjertsen, late Corporal of United States Marine, and two other Troopers, composed the new detail. On sending the men off the Captain made them a farewell speech. That speech, for him, was a long one, yet every word of it carved its indelible mark; just as Captain Pitcher himself, thru twelve long years of splendid service, has carved his indelible mark upon the gratitude of the State of Pennsylvania.

"You men have to make good in that country," he said. "You are going to establish a name for the Force. Do your full duty. Get what you go for. Keep every act above criticism. And never 'start anything' first."

Burgettstown is a typical farming community—quiet, orderly, prosperous, and as vulnerable as an oyster without its shell. The Constable of Burgettstown was seventy years old, and, altho far from well-preserved, his quavering strength would yet have sufficed for all the home-bred needs of the bailiwick. But, as it happened, the real needs of Burgettstown were not home-bred at all.

There was Cherry Valley, for example, only four short miles away.

CHERRY VALLEY was the central point in a circle of mining plants. It possessed their one and only store—a Company Store; it had some places of dubious amusement. It had also a large and bad negro element, mingled with that sort of white stock that will so mix.

Cherry Valley, by its own proud word, was a "tough proposition," and from its toughness emanated a considerable part of Burgettstown's woes. They ranged from chicken-stealing and drunken Sunday sprees to the firing of haystacks and barns, thefts of crops, and attacks upon women in lonely places. And no local means of protection of which Burgettstown was endowed operated against them in the slightest degree.

Yet these things had become so much a part of Burgettstown's daily life as to be accepted more or less like the weather that Providence is pleased to send, on a par with the discipline of a world of travail and sojourning, to be borne with resignation and to be taken as they came.

Burgettstown, as yet, had no personal knowledge of the power and purpose of a State Police, and in so far as it substituted surmise for experience, its surmise ran that the Force must be simply a new-fangled avenue of graft, a creation of costly, arrogant uselessness. The farmers, therefore, in their farmers' scepticism as to all new things, held aloof and looked askance.

SO IT happened that the first applicant for help to approach the substation door was a very humble one, indeed. It was a poor, harmless old negro who, by some mischance, had incurred the wrath of one of the black bullies of the Cherry Valley gang. The bully had promised to kill this white-polled ancient on sight, and, as he habitually "toted a gun," he was likely to carry out his threat at their first meeting.

"Certainly ain't gwine to be no meetin', if I sees him first," the old man declared with conviction, "but I cyan't have eyes all round my head at once, an' I cyan't rest nights tryin' to keep 'em so. If you could help me, Boss, I certainly would be thankful. Nobody else won't, not in dis world! I'se begged 'em all."

He had sworn out a warrant for the apprehension of his persecutor, and had taken the warrant to the Constable, in due and proper course. But the Constable, honest gray-beard that he was, feigned no ability to serve that writ. He knew that the burly black rascal would at best snatch it out of his hand and tear it up before his face, and that he would be lucky to escape merely with ridicule and without bodily injury. So the Constable had flatly refused the attempt. The patient old negro had then plodded back to the Squire.

"Dis here writ—please, sah, Constable say he won't serve it. What I gwine do next?"

"Don't know. Guess there ain't anything to do next," opined the Squire.

"But, Squire, I'se too afraid! Dat man gwine kill me, sure!"

"Well, then, I guess you'd better move away from here. Go some place where he won't find you. That would be my idea."

The suppliant stood for a moment silent, with hanging head. Then, with a sigh, he started down the path from the Squire's door. Perhaps something in the humble dejection of the figure touched the Justice slightly. Perhaps he suddenly remembered that this man could wield a whitewash brush a little bit better than any one else in the Borough, and that in haying-time he came in handily.

"Look here, you!" he shouted down the path. "There's those State Police just come to town. I don't reckon they'll do anything for you, but it couldn't hurt to walk over and ask 'em before you pack up. Your time ain't worth much, anyhow."

"Certainly we will serve this warrant," said Sergeant Jacobs, having read the writ. "Why not?"

The old negro could scarcely credit his ears. "But—but Cherry Valley's an awful wicked place, an' Cherry Valley fights by de bunch. Razors—an' knives—an' every kind of gun."

"Now, uncle, don't you fret. Go along home and eat your dinner in peace. We'll take care of you. Leave Cherry Valley to us."

The old man stared, while his lips moved. He seemed to be repeating the words to himself, savoring them one by one. Slowly his heart shone thru his wrinkled mask, translated. Fifty years had rolled away. Once more he stood in a world that he knew—among "real white folks" at home. He clasped his knotted hands while the tears rolled down his cheeks.

"Oh, Master, Master, dear!" he sobbed and laughed together, falling unconsciously upon the long-hushed name. "D-don't let them hurt you over there. Don't let 'em harm one li'l' hair of yo' precious haid! Dis ole nigger ain't wuth it!"

"MAY de Lord forgive me!" he said again, as he watched the Sergeant and Private Gjertsen ride out of sight, down the Cherry Valley road. "May de Lord have mercy on my sinful soul! I certainly did think He done called all His old-time peoples home!"

It was a Saturday afternoon—the afternoon of pay-day. The gangs had gathered in Cherry Valley, and the weekly trouble was already afoot. Men and women had been drinking heavily. Quarrels were progressing, ugly combinations had formed. As the two Troopers rode down the street, a cloud of hostile questions surrounded them. Who were they? Why had they come?

Their uniform was unknown here, their name and purpose were almost as strange. But they looked like men claiming authority, and Cherry Valley in theory denied authority utterly. In the concrete it had never seen it—knew it not at all.

Sergeant Jacobs glanced in at the windows of the Company Store, as they passed. The windows were filled with lowering faces, among them some that were American, and of the better sort.

Said the Sergeant to Trooper Gjertsen:

"I'll wager we haven't a friend in the whole village—Americans, foreigners, negroes, every one of them is ready to fight."

They rode on a few yards farther, coming to a house on whose porch a stalwart negro lounged.

"As we're strangers everywhere, we may as well begin here," remarked the Sergeant, dismounting.

They tied their horses and entered.

WITHIN the thick squalor of the place some fifteen or twenty negroes were playing poker and drinking. To the query of the Sergeant they answered, with surly scowls, that the man he sought was not in that house.

Satisfying themselves that this was probably true, the Troopers proceeded to another and yet other negro abodes, still with a like result. Everywhere the same surly quasi-insolence, the same hostile withholding of all information, suggestions or help.

Finally they approached a house at whose front door a slatternly white woman sat, while a little mulatto girl stood on the back porch. In some vague way the two suggested a guard.

"We'll try this place," said Sergeant Jacobs. "I'll take the front door, Gjertsen. You go to the rear."

Both officers asked the seeming sentries whether the negro named in the warrant was within the house. Both received a defiant "No!" Then they entered, from their respective sides, and together made a thoro search of the ground floor. The search proved barren. The Troopers mounted to the second and only remaining floor. Here also their hunt revealed nothing. Disappointed, they descended the stairs, and were about leaving the house, when an indefinable shade on the face of the white woman made them pause.

"Are you quite sure that this man is not in the house?"

"Sure? Of course I'm sure!" the woman snapped back.

The Sergeant looked her square in the eye, long and steadily. "I'll just go up and have another glance—" he began.

"Can't you take a lady's word, then, you coward, you—" and she babbled off, like a hot geyser, into a torrent of mud.

"— and I'll bring him down with me in a moment," finished the Sergeant, imperturbably, his foot on the stair.

"There's just this one place left, and he must be in it," Sergeant Jacobs was saying, a moment later.

He stood before the chimney breast in the rear chamber, gazing at the chimney-hole. In point of size that hole might conceivably have admitted the body of a man. But it was stuffed tight with old blankets and gunny-sacks, to keep the wind away, and the blankets and gunny-sacks were gray with a season's dust.

"If he's in there, they've done it well!" exclaimed Gjertsen.

They had, indeed, done it with talent. Fine white coal-ash, scattered over the hastily arranged cloths and then fanned off to avoid unnatural surplus, suggested an inference that might easily deceive. But when the two officers had jerked the last obstructing gunny-sack out of that chimney-hole the view that rewarded them comprised one large splay-foot.

They got him down, sooty and perspiring, and very wroth. They searched him for arms and found that he had turned his gun and razor over to the woman before making his ascent. At first he was confused, but as he breathed less creosote he grew more threatening and bold.

"We'll handcuff this man," said the Sergeant.

As the irons clicked fast the woman burst out again into railings. "Tin soldiers!" she screamed, and launched into her malodorous vocabulary.

MEANTIME a mob of no mean dimensions had assembled around the house. It numbered several hundred, chiefly negroes and foreign miners with the negroes everywhere well to the fore. Sergeant Jacobs, with a practiced glance, estimated its temper and its probable trend of thought. Much, as he well knew, depended on the justice of that quick estimate. His object was, first, to get his prisoner out of Cherry Valley and over to the Burgettstown Jail without harm to the man; and, second, but not less, to avoid any outbreak and consequent birth of ill-feeling on the part of the crowd itself.

"Got to make good in that country," Captain Pitcher had said. "You are going to establish a name for the Force."

And back in the first days, when all the Force were recruits together, had not the Major himself impressed upon his Troopers, one and all,—

"In making an arrest you may use no force beyond the minimum necessary."

That crowd, then, must not be allowed to conceive ideas that would necessitate strong measures.

"They will centre at first on the horses," the Sergeant theorized to himself. "I'll amuse them with the horses while Gjertsen gets ahead with the man."

"Gjertsen," he said, "remain dismounted and start away with the prisoner. I'll follow you."

Sergeant Jacobs killed as much time as he could in untying the two mounts. The crowd looked on intent, sullen and muttering. At last one in the front rank shouted:

"What are you taking this man away for?"

"Why do you ask?" responded the officer.

"I got a right to know. He lives here. I demand to know."

The speaker was a blue-black giant with a mouth like a collapsible megaphone. His manner was truculent.

"If you want to find out," coolly replied the Sergeant, "come down to the Squire's office by and by. Then you can hear all about it."

The murmurs of the negroes swelled, bordered on abuse. The Sergeant faced around.

"I am an officer of the State Police," said he, very sharply and distinctly. "Remember that you are permitted to show no disrespect and to use no bad language concerning the uniform of the State of Pennsylvania, which I wear."

As yet they guessed but dimly what he spoke. The meaning had still to be proved to them. But something in his bearing gave them pause, nevertheless.

WITH all their lawless ill-will, with all their old impunity, with all their swarming numbers, they held back in the presence of this one stranger. In the crowd there were a hundred young men of far more than the Sergeant's weight, men of ox-like strength, bred to blood and violence. A sheriff's posse, however well armed, would have been their half-holiday joy. But this solitary figure now confronting them diffused some unknown influence—was as strange as if it had descended from Mars. The uniform, color of a thundercloud, severe as if cast in steel, suggesting a Power somewhere unseen; the body that molded the uniform, lithe, clean-muscled, hard, suggesting an iron discipline that itself is power; the face, clear-cut, lean, quick, with dark, live eyes, faithfully promising surprise to whoever should go too far—all these contributed their parts. The crowd held back.

(To be concluded next week)

The professor, a noted botanist, gave instructions for a dish of mushrooms, which he had gathered himself, to be cooked for dinner expressly for his wife. The latter, who was particularly fond of them, was highly delighted at her husband's thought on her behalf and thanked him with much gusto. At breakfast next morning he greeted her anxiously.

"Sleep all right?" he inquired.

"Splendidly," she answered.

"Not sick at all—no pains," he persisted.

"Why, of course, not, dear," she responded in surprise.

"Hurrah, then," exclaimed the professor. "I have discovered another species of mushroom that isn't poisonous."—The Tatler (London).

A Fine Record

A meek looking darky was brought into a suburban police station just outside of Washington and a petty charge was put upon the blotter. He pleaded innocence.

"Well," said the examining officer, "is there anyone here who can vouch for your respectability?"

Whereupon the darky singled out the head of the small police force.

"He can," said the darky, pointing at that officer.

"I can?" gasped the policeman. "Why, I don't know you."

"Dat's it exactly," said the accused. I's lived in dis place fo' mo' dan five yeahs an' de police don't even know me. So, yo' see, gents, I can't be such a hard lot!"

The whole family likes it

Facts about the De Laval Milker
1. 650,000 cows now milked the De Laval Way.
2. De Laval Milkers now in their eleventh year of use.
3. 83.27% of the users report average saving of 2 hrs., 12 mins. per day.*
4. 97.13% of the users say it agrees with their cows.*
5. 99.4% of the users say they get as much or more milk as by hand milking.*
6. 9.49% average increase in production per cow reported by those who have records.*
7. 94.00% of users say their De Laval is easy to keep in a clean and sanitary condition.*
8. Average bacteria count of all reporting, 14,542—62% report counts of 10,000 and less.*
9. 96.45% of De Laval users say their milker is "the best," "one of the best," or a "good" investment.*

*Based on reports from 1844 De Laval Milker users in all parts of the U. S. and Canada.

Father likes the De Laval Milker because it saves so much time, produces more and cleaner milk, and makes milking cows so much more profitable.

Mother likes it because there isn't so much help to care for.

Son likes it because it is so much fun to milk with it, and because it enables him to take the place of a man in milking.

The hired man likes it, too, because milking is so much easier, and he and the boss "trade off" milking every other Sunday, so that one has a full day off.

And best of all, the cows like it because of its regular, stimulating and soothing action—and prove it by giving more milk.

There are now more than 650,000 cows milked with De Laval Milkers. Sold on such easy terms that they pay for themselves while you are using them. See your De Laval Agent or write nearest office below for full information.

Prompt Treatment Must Be Given

I had a flock of 200 chickens, all laying well. Suddenly they began to die off. Today I found seven dead. I killed one hen and found her liver was all green as if poisoned. I have lost 98 birds in three weeks. I have given them Epsom salts in the drinking water without results. Can you help me save the rest of my flock?—Mrs. J. K., New Jersey.

The symptoms you describe, with the heavy losses make me think you have fowl cholera in the flock. As you realize, this is a very serious disease, and may kill all the flock unless treated promptly.

You should take all the well birds and shut them in a clean building away from the other birds at once and not let them run anywhere where chickens have been. If there are more sick birds put them alone. Any that die should be burned or buried two feet deep.

I have written to your county agricultural agent and asked him to come out to your farm and help you. He is paid by the government to help farmers, and you won't have to pay him anything. He will tell you just what more to do, and you must do just as he says if you want to stop the disease and save the rest of your chickens. I am sorry that you have all this trouble.—R. L. S.-H.

What Do They Eat?

I have a flock of purebred Barred Plymouth Rocks. Feed wheat in the morning and corn at night and have mash in hoppers all the time. Since they have been on range a number have diarrhea and two have died; a few just sit down flat on ground or pen; others are active and laying, combs are red and they seem in good weight. What should I do for them? Would you advise selling those not affected?

I also have a flock of White Leghorns. Occasionally a hen cannot lay her egg, is swollen and has a discharge. I kill any affected in this way as I find they never get over it. Can anything be done to prevent this?—Mrs. W. M. F., Lycoming County, Pa.

I believe that some unwholesome form of feed is causing the trouble with your Rocks. If any of the grain or mash is moldy it might be to blame. It is quite possible that the hens on range have found some decaying carcass and are eating it, as such stuff causes the symptoms you describe if eaten in any quantity. It would be a good idea to look around where the hens go and see if there isn't the carcass of a fowl in some secluded place where they can get it. I don't think they have any disease.

Try giving them a dose of one pound of Epsom salts in the drinking water for each 100 birds and keeping them shut in the house for a few days until you can look around. Sometimes if the hens scratch in the barnyard very much they will pick up material there that is not good for them.

The Leghorns have evidently had prolapsis. This is due to a thin condition and can be remedied by feeding heavily on grain or adding extra corn meal to the mash. I agree with you that it is best to dispose of affected birds, as they seldom recover fully.—R. L. Scharring-Hausen.

Hens May Be Scared

We get from 11 to 15 dozen eggs per day and almost one out of every dozen has blood spots inside. Can you tell me the cause of this and a remedy?—H. H., Bucks County, Pa.

Blood spots in eggs are caused by the rupture of tiny blood vessels in the egg passages while the egg is being formed. The strain of heavy laying or the effect of fright on the birds will cause this. The best thing to do is to keep the birds in good physical condition, and see that they are not chased by dogs nor startled by the attendant. The blood spots can be discovered by shining rays of a pocket flashlight thru the eggs, or by other means of candling in a darkened room.—R. L. S.-H.

The aged lady next door had been quite ill, so one morning Willie's mother said to her small son, "Willie, run over and see how old Mrs. Smith is?"

Willie departed, but in a few minutes came back and said: "She says it is none of your business."

NEST BOX NOTES

THE notes this week are a copy of suggestions issued monthly by the N. J. Experiment Station to contestants in the N. J. Farm Egg Laying Contest.

• • •

The early hours of morning are still cold, and heat should be provided to keep the young stock growing.

• • •

A good rule to follow is: keep fires in the brooder stoves until 90 per cent of the chicks are roosting at night, or until the stock is eight weeks old, or until the first of July.

• • •

It is easier to provide heat when the fires are kept banked than when they are let go out and have to be rebuilt.

• • •

Broilers are cheap. Use them at home. In cleaning the broiler open the length of the intestinal tract to see if worms are present. If so, start feeding tobacco dust in the mash. Use two pounds of tobacco dust to every one hundred pounds of mash. Feed for three weeks, then skip three weeks and continue for another three weeks.

Young stock requires plenty of shade. The best and safest kind of shade is a cool colony house with plenty of roosts.

• • •

Keep the chicks away from the old stock and clean the colony houses at least once a week.

• • •

The production of a flock usually reaches the peak of laying by May 20th. If your flock falls off in production before this date it means that they are not in the best of condition.

• • •

Look around and see what the trouble is. Have they laid more than an 80-egg average since November? If so, this might be the trouble. If not, then it is faulty management or wormy birds.

• • •

If it is worms, feed tobacco dust in the mash at the rate of two pounds to one hundred pounds of mash. If it is management, then the drop in production can be attributed to dirty houses, poor feeding, or no green feed. Solve your problem. Don't just blame it on luck.

STOP!

Next Time Order a Mash that Contains PROTOZYME the remarkable new Value in Feed

Your Dealer can now supply poultry mashes containing Protozyme. There is no reason for any poultry raiser to be without this new scientific discovery in the mash. Your Dealer can get EPCO Feed base containing all Vitamines, Enzymes, Milk, Minerals, and essential ingredients; he adds only common feedstuffs and your mash is ready.

PROTOZYME

The Enzyme Digestant for Poultry

Jacques Wolf & Co., Mfrs., Passaic, N. J.

If your Dealer can't supply a Mash containing protozyme, send us his name and we will make it easy for him to supply you with a superior mash that will produce far better results.

Oats, Number 2 white (Philadelphia)........	.63½	...	.62	.51¾

Heavy Receipts Cause Decline

Review of the Week Ending June 4

EGGS—Receipts in New York decreased but were still more than ample for the demand. Trading was very slow and unsatisfactory up until Thursday and prices made daily declines. On Thursday the demand improved and buying was more active. The market closed firm on Saturday with the finest grades a shade higher. Nearby white eggs accumulated and dealers had heavy supplies on hand by the middle of the week.

POULTRY—Arrivals of live poultry in New York were liberal but in general the market was satisfactory. Light and heavy fowl sold on about the same basis due to the low price levels. There was a heavier supply of broilers but while light stock was slow there was a good demand for heavy fancy birds.

BUTTER—The market was generally steady during the week. Many dealers had overstocked for the holiday and buying was rather slow. Production continued to increase with pastures in generally good condition.

HAY—The market was inactive with receipts generally moderate. Buyers in most cities were purchasing only for local needs. Timothy was irregular with only light offerings of top grades. There was a better demand for the best grades. Alfalfa prices declined in middle western markets.

GRAIN—More favorable weather in the winter wheat area and a less active demand at the higher prices caused grain prices to decline. Corn prices reached the highest point of the season during the week but this brought larger offerings and prices dropped. Oats prices were practically steady but the demand was lighter with the decline in corn prices.

FEEDS—The feed market was barely steady. Bran was slightly lower at the close and linseed meal practically steady. Cottonseed meal was steady and gluten feed slightly higher.

LIVESTOCK—The Chicago hog market was generally stronger but there was a weaker tone at the end of the week. Beef steers averaged lower on practically all grades. Heifers and cows were about steady while heavy calves and vealers were higher. Stockers and feeders were lower. Fat lambs and yearling wethers advanced while fat ewes were weaker.

POTATOES—The markets were strong and prices advanced on both new and old stock. Comparatively light supplies and an improved demand were largely responsible for the advance. On Monday, June 6, the market again opened strong with old stock bringing the highest price of the season. Maine Green Mountains sold at $7 to $7.50 per 150-pound sack. New stock was also higher with supplies from South Carolina, North Carolina, Georgia and Virginia. The top price was $11 per barrel for Eastern Shore of Virginia Cobblers and South Carolina Spaulding Rose.

ASPARAGUS—Supplies of homegrown asparagus were lighter in Philadelphia last week and the demand was stronger for green stock while white showed little change in either demand or price.

County News and Comment

Berks County, Pa.—We have experienced an unusually wet spring. Rainfall too heavy to harrow corn properly. Most of corn beginning to show the second and third leaves but some farmers claim only one-half of seed germinated. Potatoes coming on in spite of unfavorable weather conditions. Wheat and rye may bring a fair yield. Grass fields look very good. Young clover in wheat fields begins to show life. Road supervisors are getting the roads in good shape. Highway contractors have done a lot of grading on the new road from the Lehigh County line to Topton. Wheat, $1.40; ear corn, 75c; oats, 50c; potatoes, $2.10; hay, $24; butter, 45c; eggs, 24c.—W. N. M., May 27.

Blair County, Pa.—We are having lots of rain and frequent thunder storms with the usual damage to freshly plowed fields. Oats are up and spring wheat is doing well. The grass is growing rapidly and some corn is up. Much of the seed corn is had this year. There is still a lot of corn and potatoes to plant. The small fruit will be rather scarce this year but prospects are good for a berry crop and a fair yield of apples. Our vocational high school at Martinsburg closes this week. Wheat, $1.30; corn, $1; oats, 50c; hay, $25; straw, $15; veal calves, 10½c, live; eggs, 20c.—O. E. H., May 26.

Clinton County, Pa.—We have had rain nearly every day for two weeks, creeks are bank full. Heavy thunder storms have caused damage to fields and buildings. Oats all sown and looking good. Some corn planted and coming up but the most is still to be planted. More potatoes will be planted than last year. Old potatoes scarce, selling at curb market at 60c pk. Prospects good for a large hay crop. Early sown wheat looking good. Fruit of all kinds will be scarce. Roads in bad condition. Spring pigs high in price. More chicks being raised than last year. Many brooder stoves being used. Electricity being installed on many farms. Prices: wheat, $1.25@1.30; oats, 50c; corn, 85c; butter, 42c; eggs, 20c.—W. C. W., May 25.

Lancaster County, Pa.—The continued rain has made corn planting very late; some not finished at this time. Oats also was planted late but is now growing. The cold and frosty weather during blossom time has not done nearly so much damage as was first feared. Cherries and pears forming and the outlook is favorable for a good crop of berries. Gardens will be quite late. Young poultry is coming on nicely. Prices: hay, $18; eggs, 23c; butter, 22c.—B. C. R., May 28.

Lawrence County, Pa.—Weather conditions not favorable for planting. Rainy cool days; ground soggy. Those who pushed their work and got corn and potatoes in earlier in the month are ahead, if it would warm up; if not, they must replant. Some few fields of wheat look quite promising. Abundance of pasture and dairymen report unusual flow of milk. Electrical storms have been frequent during the month, also several heavy frosts. Dirt roads demand much dragging. Pears, peaches, plums and apples have suffered from effects of frost. Cherries making quite a promising showing. Wheat sells at $1.30; oats, 50c; ear corn, 35c; timothy hay, $19; clover hay, $21; country butter, 50c; strictly fresh eggs bring from 30c to 35c.—M. L. V., May 31.

Lebanon County, Pa.—The weather for the greater part of May was cool and rainy. Grass and wheat growing well in some fields while in some localities stand is poor. Oats has a good start and is improving. Some corn yet to be planted and some farmers are replanting. Old alfalfa fields a poor stand due mostly to the dandelion weed. Pastures coming along nicely and in many places cattle grazing. Some improved road building being done. Prices: wheat, $1.35; corn, 85c; oats, 50c; hay, $17; potatoes, $1.50; butter, 52c; eggs, 22c.—P. L. M., June 2.

Sullivan County, Pa.—Weather here is very much unsettled. The majority of farmers are very late in getting their corn in. If the wet weather continues many farmers will be handicapped as corn will not mature in this county if planted after June 1st. Oats looks fair and hay is doing fine. The prospects for fruit are not very encouraging because of the rains and late frosts. Frosts have also spoiled many fine gardens. Some prices: oats, 69c; potatoes, $1.25; butter, 45c; eggs, 22c.—M. G., May 30.

Susquehanna County, Pa.—If the old saying, "A wet cold May means a barn full of hay" is true, we should have barns well filled and stacks aplenty as it has rained nearly every day of May. A few fields of oats are sown but not doing well as the weeds have gotten a better start than the oats. Many farmers still have plowing to do for corn and potatoes. No gardens planted here. Two heavy frosts the last week may have ruined the fruit. Little pigs are scarce and selling for $15 per pair and fall shoats are bringing $25 per pair. Cows are high in price, grade cows bringing from $125 to $150 each. Many farmers lost early lambs. Roads are cut up badly, being so wet and soft from continued rains. Poor hatches and weak chickens reported. Many send away for incubator chicks and have very good luck raising them. Butter, 50c; eggs, 27c; potatoes, $2.50.—J. A. G., May 30.

Broccoli Needs a Standard

Uniform Packages Only Solution for Jersey Growers

"BROCCOLI is not wanted!" Such was the statement made by a well-known commercial market reporting agency in New York City in its issue of April 23rd. Apparently a variation in quality had been the determining factor in the gradually declining market for this green, more so than supplies, which according to all reports were not more than moderate from any of the producing sections including New Jersey.

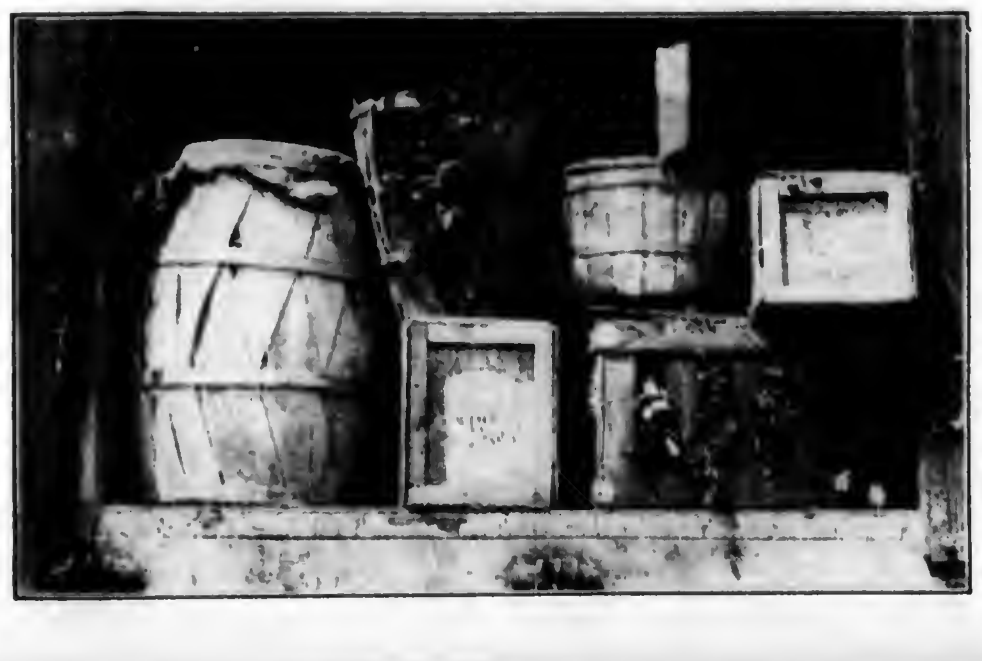
New York City received considerable amounts of broccoli greens from sections in Atlantic and Cumberland Counties, where the season opened the latter part of March and continued into the first few days of May. Because of the dull market and low prices, most of the growers yielded to the temptation to market their crop in almost any kind of containers. The result was that practically all of the broccoli was shipped in second-hand packages. Such a condition tends to hold down a weak market and will not permit the best returns.

Six Types in One Car

An excellent example of this condition was found at one of the important loading stations on April 20th. At this particular station twelve types of second-hand packages were being used in various cars. They included barrels, bushel hampers, pepper crates, berry crates, bushel baskets, peach crates, half-barrel hampers, lettuce crates, pineapple crates, onion crates, ordinary store boxes, and the standard hinged-top broccoli crates. One of the chief offenders was a car containing six different types of packages. The illustration shows these types, which are the first six named in the above list.

Not only were package conditions bad, but those of car loading as well. A floor, a roof and four walls to keep the containers within the car seemed to be the chief requisites for transportation from loading point to market. Lightly loaded cars with packages of various sizes stacked several high along the sides and ends of the car, with no bracing and with wasted space in the middle of the car, are not going to reach their market intact. Frequently such poor loading results in some broken packages, and broken packages mean loss or deterioration of contents. Disorderly or ragged loading, or the stacking of boxes on light baskets, is likewise detrimental. At this particular station, eight cars were shipped that day, whereas five properly-loaded cars could have carried the same amount of goods. This meant not only additional freight to be deducted from a low market, but also an uneconomic use of extra cars and danger of shifting loads and broken containers.

The type of package best suited for broccoli greens is the hinged-top crate, the outside measurements of which are 24" x 15¾" x 10½". The greens can be bunched and packed on end in this crate, thereby assuring an attractive package. Growers will do well to consider the better methods of competitors and benefit by equaling their closer standardization. Not until packages are generally standardized to one or two types, and greater care given to loading cars, will the broccoli industry of South Jersey get the greatest returns possible.



The Market Place

By W. R. WHITACRE

Pennsylvania Bureau of Markets

I WOULD like to see the orange groves of California and the roses that bloom in winter, but I am afraid I would be disappointed. Every time I see some famed wonder I find that we have something here in Pennsylvania that far surpasses it.

Last week I drove the family up to Harrisburg and again I was impressed with the wonder of it all. The Chester Valley with its rolling hills, the winding streams thru the meadows, the white farm houses, the broad fields of Lancaster County, well-kept homesteads, and the shaded quiet villages are hard to beat. It seemed so quiet and restful after the rush and noise of the city. I suppose if I got up at 4:00 A. M., milked the cows, tended the stock and put in a day's work behind a harrow I would look at it in a different light but the advantage of the observer is that he sees only the rosy side of the other fellow's existence.

We passed thru Ephrata and there saw people in their plain dress, the bonnets, chin whiskers and broad-brimmed straw hats. Then came the iron mines at Cornwall, like a deep gash in the earth. These and the unique red stone houses drew our attention while the little engine puffing with its train of cars just suited the boys. We skimmed along fine paved roads, well marked with route posts and signs telling of the history of the towns along the way.

Where the Capitol Guards the City

Finally, we reached Harrisburg where the dome of the Capitol looks down on the busy city. We crossed the Susquehanna at dusk, the lights of the city and railroad making it appear a huge lake with coal barges silhouetted against its surface. The Blue Mountains were covered with a bluish haze and they seemed to suit their name better than ever.

Saturday is a market day at Harrisburg and the Market House was a busy place when I arrived. The big building with its neat aisles lined with white stalls was a mass of color. Iris, peonies, mock orange, flowers of all descriptions filled the stalls. People were buying to honor those friends who have passed on and some, I hope, for the enjoyment of the living.

Homegrown Produce Not Uniform

There were fresh-killed chickens that did not look like those we generally see in the city; baskets of eggs, meats, cheese, cakes and food of all kinds. There were homegrown fruits and vegetables and those from distant states. One thing that I noticed was the lack of uniformity of the homegrown produce. A bunch of asparagus might weigh a half pound or two pounds. In fact, some bunches were so small you could have hid them in one hand.

Prices were nearly as irregular and a buyer would need to shop quite a bit if he wished to get a good buy. Prices in general were higher than retail prices in Philadelphia. It was what they called "a good market" for people were filling their baskets. It is a treat to walk thru a farmers' market and see fresh, attractive produce. The market seems to be a place where friends meet friends and farmers have time to rest a bit and talk over their problems. That is the reason we named this column "The Market Place"—because we wanted it to be a place to meet friends and talk things over.

Is Your MANURE PILE Leaking Dollars?

Manure stored in an open barnyard loses more than half its fertilizing value by seepage, according to tests made by the New Jersey Agricultural Experiment Station.

"At present prices of crops, manure has produced crop increases equal to about $4.00 per ton of manure applied," reports the Purdue University Agricultural Experiment Station.

Use ALL of Your Manure Build a Concrete Manure Pit

A concrete manure pit saves enough fertilizer in *one year* to pay for itself.

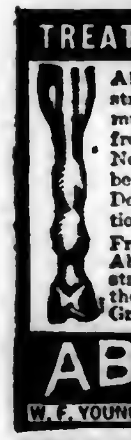
Plans and complete information on how to do the work is given in our manure pit booklet. Write today for your free copy.

PORTLAND CEMENT ASSOCIATION

A national organization to improve and extend the uses of concrete

2151 Jenkins Arcade, Pittsburgh, Pa. 1315 Walnut St., Philadelphia, Pa.

Concrete for Permanence



TREAT SWOLLEN TENDONS

Absorbine will reduce inflamed, strained, swollen tendons, ligaments or muscles. Stops the lameness and pain from a splint, side bone or bone spavin. No blister, no hair gone, and horse can be used. $2.50 at druggists, or postpaid. Describe your case for special instructions. Interesting horse book 2-S free.

From a race horse owner: "Used Absorbine on a yearling pacer with strained tendon. Colt all over lameness, though for a time, couldn't take a step. Great stuff."

ABSORBINE

TRADE MARK REG. U.S. PAT. OFF.

MINERAL COMPOUND FOR

In use over 30 yrs.

Booklet Free

$3.25 Box guaranteed to give satisfaction or money back. $1.10 Box sufficient for ordinary cases.

MINERAL REMEDY CO. 461 Fourth Ave., Pittsburgh, Pa.

TESTED COWS

100 head of Springers consisting of Guernseys, Holsteins and Milking Short Horns. These cows are all ¾ grades and will not last long in the market. Get in touch with me at once. Buy your cows in Bradford County. Only 5½ reactors in the whole county.

JOHN P. FRETZ,
Roosevelt Highway Farms, Troy, Pa.

MISCELLANEOUS

CATCH SWARMS OF BEES in your own hive. One man caught 11 swarms in one season. Money and health in honey. If you have a back yard you can keep bees. How to fix the hive and best places to set it. What to do and use to attract the bees. Full instructions $1.00. This is a tested, reliable method. Bivins, Printer, Box 540, Summit, New York.

YOUR OWN NAME actually printed free on samples of Personal Stationery. Write your name and address plainly, and send only stamp for postage. Bivins, Printer, Box 540, Summit, New York.

500 BOND LETTER HEADS and 500 good white envelopes, printed and sent prepaid for $5.00. Samples free. Also rubber stamps and supplies. Bivins-Printer, Box 540, Summit, New York.

WOOL—ship large or small lots; best cash prices; shipments held separate when so requested. We furnish bank reference. S. H. Livingston, Successor Keystone Hide Co., Lancaster, Pa.

SATTLEY 2½ horse engine, $30.00. 700 watt, 32 volt generator, $25.00. Tent 9x12, new, $15.00. H. Van Kuren, Rummerfield, Pa.

WANTED Summer accommodations. Mother with child of three. Give details. Box 111, Pennsylvania Farmer.

DAIRY

BUCK & DOE RUN VALLEY FARMS—Hereford Cattle and Poland China Hogs. Sold out on hogs—taking orders only for future delivery. THE SAINT AMOUR COMPANY, Mortonville, Pa.

IF YOU WANT practically pure bred Holstein or Guernsey dairy calves, write EDGEWOOD DAIRY FARMS, Whitewater, Wis.

10 GUERNSEY DAIRY HEIFER CALVES—Practically pure, from rich milkers. Write us. L. H. TERWILLIGER, WAUWATOSA, WIS.

CLOVERKNOLL REG. GUERNSEY COWS $150 and up. 3 weeks calves, $75 and up. Acc. Herd 83652. CLOVERKNOLL FARM, NEWTOWN, PA.

MILKING SHORTHORNS—Cows, heifers and bulls. Reds and roans. Best breeding. Accredited herd. C. M. KENNEDY & SONS, Ulster, Bradford Co., Pa.

BEAUTIFUL, finely bred, registered Jersey bull calf, 7 mos., four white feet and star, $60. Also an extra fine heifer. W. F. McSPARRAN, Furniss, Pa.

SWINE

BERKSHIRES—Large and Prolific Strain. One Boar 9 months old, $50.00. Ten open Gilts, price reasonable. Spring Boars and Gilts, 170 to select from. Bred right and guaranteed to please. DAVIS BERKSHIRE FARMS, Dagsboro, Del.

Big Type Reg. Durocs A few choice bred gilts and pigs for sale. Priced right and shipped on approval. G. C. SAUFLEY, R. D. No. 2, Hummelstown, Pa.

400 CHESTER WHITE and Berkshire Pigs, 6 weeks old $6.00; 7 weeks $6.75, taught to eat. High-grade and Pure-bred pigs, not to be registered, $8.00. OAKS DAIRY FARM, WYALUSING, PA.

RAISE Big, Easy Feeding Type, Spotted Poland Chinas and make more money, men, on your hogs. Order from the old reliable herd. Pleasant View Farm, Boyd Hamman & Sons, Shiloh, Ohio.

300 FEEDING PIGS six to seven weeks old $6.00 each. These pigs are grown on free range with access to growing grains. INDIAN CORN HOG FARM, Dushore, Pa.

PURE BRED, Big Type Poland China Gilts, weighing around 130 lbs. Prices reasonable. C. L. LEBO, WOMELSDORF, PA.

LARGE TYPE DUROC BOARS, GILTS AND SPRING PIGS at farmers' prices. C. H. WIRE, R. No. 6, YORK, PA.

SPOTTED POLAND CHINAS
RITTER STOCK FARM, FREMONT, O.

DUROCS Young Bred Sows and Boars. Bargain Prices. HUGH BRINTON, WEST CHESTER, PA.

PEDIGREED BIG TYPE CHESTER WHITES 125 fall pigs, 25 service boars, 85 bred sows, priced low, shipped on approval. C. E. Cassel, Hershey, Pa.

FEEDING PIGS—7 weeks old $7.50 each. Express paid. Shoats 2 to 3 mo. old $10 each. I. R. Tanger, York Springs, Pa.

TWO EXTRA GOOD REGISTERED BERKSHIRE BOAR PIGS, 10 weeks old. Quick, big growers. W. F. McSPARRAN, FURNISS, PA.

SOILS AND FERTILIZERS

Dr. J. G. LIPMAN, Staff Contributor and Adviser

Director New Jersey Agricultural Experiment Station

Which Would Be More Economical?

A CORRESPONDENT from central New Jersey inquires whether ground raw oyster shells at $5.50 per ton f. o. b. Philadelphia would be a more economical purchase than hydrated lime at $14.50 delivered at his station. His freight rates on the oyster shells would be $2 per ton. He has also inquired about a mixture consisting of 600 pounds of bone meal, 600 pounds acid phosphate, 600 pounds nitrate of soda and 200 pounds of muriate of potash recommended to him for spinach. He has inquired whether this mixture, used at the rate of 1000 pounds per acre, together with additional applications of nitrate of soda during the growing season, would serve his purpose. The following is the answer to his questions.

Sold on Basis of Actual Lime

Ground limestone or raw ground oyster shells are usually sold on the basis of 50 per cent of actual lime, whereas hydrated lime of good quality should contain about 75 per cent actual lime or its equivalent. On this basis, a ton of ground limestone or ground oyster shells will furnish 1000 pounds of actual lime, whereas a ton of hydrated lime will furnish 1500 pounds of actual lime. Assuming that the freight rate from Philadelphia is $2.00 per ton, the ground oyster shells would cost you, delivered at Freehold, $7.50 as against $14.50 for hydrated lime. It will take 3000 pounds of the raw oyster shells to give you the same amount of lime which you would obtain in one ton of hydrated lime. This would mean that the ground shells would cost you $11.25 as against $14.50 for the hydrated lime. You would have in the raw shells an equivalent of about 15 pounds of ammonia and perhaps 10 pounds of phosphoric acid per ton which would cost you nothing. At the prices quoted in your letter, it would seem, therefore, that the ground raw oyster shells would be the more economical purchase.

Suggested for Spinach

The special mixture for spinach which was suggested to you was made up of 600 pounds each of nitrate of soda, acid phosphate and bone meal and 200 pounds of muriate of potash. This mixture should contain in round figures about 6 per cent of ammonia, 8 per cent of phosphoric acid (12 per cent total) and 5 per cent of potash. There is no reason why you could not use 1500 pounds of this mixture per acre and reinforce it with side dressings of nitrate of soda. This should give you satisfactory results under average seasonal conditions.—J. G. Lipman.

First Soil Congress Will Convene Soon

THERE is no substitute for soil in the affairs of men. In the case of all other raw materials we may find ways of getting along without them. Economists have painstakingly calculated how long our coal, oil and timber supplies will last and then have comforted us by saying that when these materials are exhausted we may easily turn to other sources of heat, power and structural supplies.

Not so with soils. The First International Soil Congress at its sessions in Washington, next June 13 to 22, will serve to remind us that the soil is the one absolutely essential heritage of humanity. The soil is the supreme bank account which must not be overdrawn, if man is to continue on earth.

In the ten-day sessions of the Soil Congress every phase of soil studies will be brought up for consideration. The chemistry, the structure, the bacterial life of soils are to pass in review. Fertility, methods of cultivation and their relation to crop yields are to be brought into the spot-light.

Many Topics Will Be Discussed

May we depend on drawing fertility only from the upper foot or two of soil or may plant food be brought to the surface in soil moisture from lower depths? In other words, is our supply of fertility a foot or a mile deep? Can we learn the secret process by which certain bacteria seize upon nitrogen from the air? These and hundreds of other topics are on the program.

Twenty-five nations will take part in the Soil Congress. From South Africa to Norway and from Holland to Japan delegates are coming and the delegates from our own 48 states will bring the total attendance up to about an even thousand. President Coolidge will address the Congress on the afternoon of the first day, and in the evening of the second day Secretaries Kellogg and Jardine will give a reception to the delegates in the Pan-American Union at which a large part of the diplomatic corps will be present.

Doctor J. G. Lipman, Director of the New Jersey Experiment Station and Soils and Fertilizers Editor of Pennsylvania Farmer, is president of the Soil Congress. He has arranged for a special train which will take the delegates on a 30-day trip to the Pacific Coast and back. Numerous stops will be made to study soil conditions, irrigation projects, and various industries allied to agriculture.

Bradford County Leads

ALMOST one of every five farms in Pennsylvania has a silo, according to the more recent estimates of the Bureau of Statistics, State Department of Agriculture. The total is 36,810 and the ten leading counties are:

Bradford, 3000; Crawford, 2180; Tioga, 2050; Susquehanna, 1850; Lancaster, 1790; Chester, 1600; Erie, 1500; Wayne, 1200; Somerset, 1140 and Mercer, 1070

To Elect Trustees

DELEGATES chosen by agricultural and engineering societies in the various counties of the state will take part in the election of four members of the Board of Trustees of the Pennsylvania State College to be held at State College on June 11th.

Trustees elected by delegates from county societies and whose terms expire this June are George G. Hutchison, Warriors Mark; John A. McSparran, Furniss; William P. Rothrock, State College, and Chester J. Tyson, Floradale.

Professional Touch

Dentist (extracting nail from tire of his car)—Quiet now. You won't even feel this.—Life.

For Home Use, Too

Relieves pain. Soothes and heals. An old-time family remedy. Keep it always handy for lumbago—backache—sore and aching muscles—cuts—sprains—bruises—and burns. At your druggist, $2.00 a bottle.

FARM LANDS

92 ACRES [illegible] weekly income, 11 cows and [illegible] thresher, [illegible] potato digger, heavy and light wagons, [illegible] equipment, crops included [illegible] paid 1930; handy motor fare, river, lake and town, good 8-room house with bath, cemented basement barn, other good bldgs. First here gets a bargain; $1,500 part cash. See picture and details pg. 55 big [illegible] Catalog [illegible] Free. Strout Agency, 1422-BE Land Title Bldg., Phila., Pa.

CLEARING $2,600 YEARLY and better easily doubled. 55 acre [illegible] equipped and running, owner [illegible] beautiful climate. $4,000—terms. P. Quast, Snow Hill, Eastern Shore of Maryland.

BECAUSE OF HEALTH, [illegible] farm, 240 acres, 2 houses, [illegible] Jersey herd with 12 years [illegible] near school, concrete, town. $15,000. Box 73, Troy, Pa.

WANTED TO HEAR from owner of farm for sale. O. Hawley, Baldwin, Wis.

HELP WANTED

IF YOU ARE A MAN worthy of the name and not afraid to work I'll bet you $50.00 you can't work for us thirty days and earn less than $200.00. Think I'm bluffing? Then answer this ad and show me up. Openings for managers. Wonder Box sells on sight. The best selling proposition in America today. Write Tom Walker, Dept. 175, Pittsburgh, Pa.

AGENTS—New plan makes it easy to earn $50.00 to $100.00 weekly, selling shirts direct to wearer. No capital or experience needed. Represent a real manufacturer. Write now for Free Samples. Madison Shirts, 566 Broadway, New York.

WANTED AT ONCE A single man understanding general farm work. Good habits. Farm owned by colored people. Permanent job. Colored or white may apply. I. O. Holden, Powell, Pa.

OUR NEW HOUSEHOLD DEVICE washes and dries windows, sweeps, cleans walls, scrubs, mops. Complete outfit costs less than brooms. Over half profit. Harper Brush Works, 178 3rd St., Fairfield, Iowa.

SALESMEN—New invention beats vacuum sweeper and all its attachments. No electricity required. All complete only $2.95. Over half profit. Write O. P. Morgan, Mgr., 750 Grimes St., Fairfield, Iowa.

MARRIED MAN WANTED to plow and cut wood. $30 month and house with garden and firewood. Middleville Co., Middleville, N. J.

MACHINERY

RICH MAN'S Corn Harvester, poor man's price—only $25.00 with bundle tying attachment. Free catalog showing pictures of harvester. Process Co., Salina, Kans.

NEW BEEMAN GARDEN TRACTOR, all attachments, cost $180.00, for $160.00. Wm. Seidel, Washingtonville, Pa.

WANTED—Two or three horse potato digger, also a Boggs potato grader. Give full description. J. A. Boggs, Route 4, Lebanon, Pa.

DOGS

COLLIE AND WIRE HAIRED FOX TERRIER PUPPIES WANTED—Will buy entire litters. GEORGIE GORDON, Rt. No. 1, Chatham, N. J.

LEWELLYN AND ENGLISH SETTERS, also rabbit hounds on trial. Pamphlet free. O. K. KENNELS, MARYDEL, MD.

Veterinary

Conducted by Dr. J. F. Shigley

Associate Professor of Veterinary Science, Pennsylvania State College, and Veterinarian in charge of College Livestock.

Advice thru this department is free to our subscribers. Each communication should state history and symptoms of the case in full; also the name and address of writer. Initials only will be published. We invite readers to make use of this service. Clippings from the column when properly preserved and classified, make one of the most valuable medical symposiums a farmer-stockman can obtain.

SORE ON LEG—LAMBS NOT LIVELY.—One of our mares has an injury on the inside of the left forearm, almost at the elbow. It looks as tho the sore was started by the calk of the shoe when she lay down, as it is right where her foot would strike it. There is an open wound in the center of a puffy swelling, which formed a sac about three inches in diameter. This swelling does not seem to affect the rest of leg, as she does not limp or favor it. In fact, the place does not seem very sore.

We have about 20 lambs from six weeks to two months old. They do not seem as lively and energetic as young lambs should be. They eat well and do not look unthrifty, but they seem to lie around a lot and when stirred up and made to move they move their hind parts very stiffly and act clumsy and weak.—P., Laurelton, Pa. It may be necessary to remove some necrotic or dead tissue from the injury before healing will occur. The injury may be washed out daily, using a two per cent solution of a coal tar disinfectant or a commercial solution of chlorine. A syringe can be used for injecting the liquid into the opening. Apply iodine sparingly as it may blister.

One should consider the possibility of internal parasites as being at the root of the lamb trouble. Drenching is usually not resorted to until the lambs are three months of age. In the meantime you may notice improvement by turning these lambs on pasture. Examine the feet carefully as they may have hoof rot. The feet should be trimmed and cleaned carefully.

KICK WOUND FAILS TO IMPROVE.—I have an eight-year-old mare which was kicked the latter part of February on the hip and the socket joint nearby swelled considerably. We had the injury blistered but after that the knee swelled twice as large as ordinary size and somewhat down to the pastern joint. When she walks a cracking noise can be heard in the pastern joint. When standing she holds her leg up and seems to have a great deal of pain. What can be done for her?—C. R. R., Gettysburg, Pa. A careful examination of the leg should be made to determine the extent of the injury. That is, to determine the possible presence of new bone growths. Bathe the leg in warm water to which has been added common salt in the proportion of one tablespoonful for each quart of water. Massage leg daily, rubbing the area from stifle to pastern joint. If you have a pasture, turn the animal out until improvement is evident.

Our Readers' Classified Advertising Department

A market place to buy or sell at little expense. Over 100,000 farm families read Pennsylvania Farmer every week. Rate 6 cents a word each for one, two or three consecutive weekly insertions; 5 cents a word each for four or more insertions. Count each number and initial and send cash with order. Orders, discontinuances or changes of copy must reach us by Wednesday of week preceding date of issue. All advertisements set in uniform style, no display type or illustrations. Poultry advertising may run here, but if displayed or illustrations used must run in display advertising columns at commercial advertising rate (65 cents per agate line). Livestock advertising not accepted in this department. Minimum, ten words.

Herb the Handy Man Tells How—

to the ladies (AT LAST)
HERE'S HOW TO REMOVE
TARNISH from SILVER
AHA-A —— WHAT ARE YOU DOING HERE?
UH-WHY-AH-UH-I'M A SILVER POLISHER — WORKIN' NIGHT SHIFT — AN' I JUST DROPPED IN T'SEE IF I COULDN'T CLEAN UP YOUR SILVER WARE
1. BRING WATER TO BOIL IN ALUMINUM KETTLE
2. ADD TEASPOONFUL OF SODA, AND ONE OF SALT TO EACH QUART OF WATER
ALMINA — THIS HERE SOUP IS POSITIVELY FLAT! CAN'T I NEVER LEARN YOU T'PUT LOTSA SEASONS IN MY VITALS?
ADNOID! THAT'S NOT SOUP — IT'S TARNISH REMOVER!
3. PUT TARNISHED SILVER INTO KETTLE SO THAT IT IS COMPLETELY COVERED, IN 1 MINUTE OF BOILING IT WILL BE BRIGHT & CLEAN
4. REMOVE SILVER, WASH IN HOT WATER AND DRY ON SOFT TOWEL ~~~
HEAVENS! LOOK AT THAT SILVERWARE - THE SILVER IS ALL EATEN OFF! WALDO, DID YOU PUT THESE IN THE TARNISH-REMOVER AS I TOLD YOU?
TARNISH REMOVER! GOSH, I THOUGHT YOU SAID VARNISH REMOVER!
5. EMPTY AND WASH THE KETTLE AT ONCE.
COOK ACID FOOD OR VINEGAR IN IT • TO PREVENT TARNISH.
YESSIR, HALIBUT — TH' FLOODS HAS BEEN BAD THIS YEAR BUT I'M GLAD T'SAY THEY AIN'T TOUCHED ME YET.
- NOT YET.

Fed this summer

AMCO 20% DAIRY

will do these

3 things

FROM 1920 to 1925 the dairy cattle in the United States decreased 10 per cent. *This indicates better prices for milk, and for cows.* It will pay you to keep your own herd in condition to take advantage of this situation.

Grain feeding on pasture will help. Tests at Cornell University show that a herd fed grain on pasture gives 25 per cent more milk for the year; it not only milks better during the summer but gives more milk *on the same amount of feed* in the fall and winter.

The practice of feeding a single ingredient, or a mixture of two or three, when the cows are on pasture, will not give these results because two of the chief needs of the cows—variety and minerals—are neglected in this kind of feeding.

Amco 20% Dairy not only furnishes the right amount of protein to go with pasture grass, but it contains a sufficient number of ingredients to give the cow the variety she requires in her feed, and the minerals which she must store in the summer for fall and winter needs.

The formula of Amco 20% Dairy was checked and approved by the College Feed Conference Board (feeding experts of nineteen state colleges) and meets their specifications.

Your Amco Agent can supply you.

1. Make cows produce more milk *from a like amount of feed* next winter.
2. Make them produce more milk this summer.
3. Keep them from losing flesh on pasture.

Eckles of Minnesota
recommends this daily schedule for grain feeding on pasture

For Jerseys or Guernseys producing	*For Holsteins or Ayrshires producing*

Wild Cherry Flies a Red Flag

By Dr. E. M. GRESS, Penna. State Botanist

Editors' Note:—This is the fourth of a series of articles on poisonous plants commonly found in Pennsylvania and adjoining states.

THE peculiar "cherry odor" of crushed wild cherry leaves is familiar to many people. This odor is due to a poisonous chemical which is known as hydrocyanic acid or more commonly as prussic acid. If one inhales too much of this odor from the wild cherry blossoms which are past their prime, headache may be induced.

Horses, cattle and sheep are sometimes killed by eating the leaves of wild cherry and the fruit, when eaten without removing the seeds, has been fatal to human beings.

(Photo by H. B. Kirk.)

Leaves and fruit of wild black cherry both poisonous.

All parts of the tree contain the poisonous element but it is most abundant in the leaves of vigorous young plants, and in the kernels of the fruit. Wilting of the leaves causes a chemical change which increases the amount of the poisonous element, and the poisonous prussic acid is also increased in the stomach while the leaves are undergoing digestion.

No doubt, many farmers lose livestock every year from prussic acid poisoning due to the eating of the wild black cherry leaves.

A few years ago some cattle died in pasture on a farm in Indiana. The death happened in a short time after a severe wind storm. On investigation it was found that the wind had broken some branches from a wild cherry tree that stood in the pasture and that the branches showed evidence of having been eaten by the cattle.

The fruit of the wild cherry is eaten by many birds. The seeds, however, are not digested and are distributed by these birds. This distribution often takes place along old fences, and along the edge of the woods; therefore, the wild cherry is often found in such places.

The symptoms of wild cherry poisoning are unsteady walking, difficult breathing, protruding eyeballs, convulsions, odor of prussic acid in the breath, finally unconsciousness and death. The action of the poison is so rapid that little, if anything, can be done in remedial treatment after the symptoms become manifest.

No Pasture Needs Prussic Acid

Here again prevention is worth a pound of cure and every farmer should see to it that wild cherry is kept from the pasture.

Wild cherry is so well known that a description is hardly necessary. There are two species in Pennsylvania; wild black cherry (Prunus serotina) and choke cherry (Prunus virginiana). The former contains larger amounts of prussic acid than the latter. Wild black cherry is a tree that attains a height of nearly a hundred feet. The flowers are white and grow in elongated, round clusters. The cluster of flowers is followed by a cluster of small, purplish-black cherries, which are slightly bitter, but not unpleasant to the taste when ripe.

The wood of wild cherry is very valuable for cabinet work; but in addition to its being poisonous, the tree is a harbor for the injurious insect known to everybody as the tent caterpillar. Often in summer the wild cherry is literally covered and defoliated by the nests of this insect.

No doubt, it would be an advantage to the farmer to replace the wild cherry on his farm by some other valuable tree that will not poison his livestock nor harbor injurious insects.

United States Experiment Stations Study Dairy Problems

THE larger cows within the different breeds are usually the higher producers according to the United States Bureau of Dairying. The Bureau is experimenting with the feeding of skimmilk for longer periods than six months to determine if such feeding results in earlier maturity and larger sized animals.

The Bureau maintains a number of stations thruout the country. At Ardmore, S. D., breeding work is being carried on with purebred and grade Holsteins. The first sire used increased the production of his first five daughters 37 pounds of butterfat each above the yield of the dams. The first five daughters of the second sire averaged 23 pounds of butterfat less than their dams, while the third bull, a proven sire, has increased the average production of his first twelve daughters by 64 pounds of butterfat above that of their dams.

In grade herd improvement with purebred sires it was found that the grade dams produced an average of 202 pounds of butterfat and milked only 236 days; the daughters averaged 246 pounds of butterfat and milked 272 days; the granddaughters averaged 345 pounds butterfat and milked 326 days. In other words, the improvement in production came principally thru increased persistency in lactation period.

At the Huntley, Montana, Station, cows are being fed on three planes of nutrition; roughage alone, roughage plus one pound of grain for every six pounds of milk, roughage plus one pound of grain for every three pounds of milk. The cows are milked three times daily and the respective yields of butterfat per cow yearly to date for the three classes are 528 pounds, 627 pounds, 713 pounds. It is evident that the yield increased decidedly as the food allowance increased. However, the roughage cows were the most economical producers for the amount of digestible nutrients consumed per pound butterfat yielded, while the full grain ration was the most costly.

Studies are being conducted on the relation of the physiology and conformation of cows to their producing capacity. Thirteen different

What of Our Farm Boys and Girls?

Some Observations On Their Likes and Dislikes, Handicaps and Opportunities

By ALLEN L. BAKER, State Club Leader

Pennsylvania State College Agricultural Extension Service

IN PREPARATION for the first annual meeting of the American Country Life Association, the United States Department of Agriculture tabulated approximately [illegible] thousand replies to questionnaire from members of Boys' and Girls' Agricultural and Home Economics Clubs. These replies give an interesting insight to the state of mind of farm boys and girls, and also of boys and girls resident in small towns who may be classed as "rural" but not living on farms.

Prefer Country or Village Life

Ninety-six per cent of the farm boys and girls indicated that they like to live on the farm. Eighty-six per cent of the boys and ninety-one per cent of the girls living in small towns said they liked the village life. The high percentage voicing a preference for the farm may be a little higher than the general average due to the select group reached thru the questionnaires and because of the fact that membership in clubs with its ownership and recreational features, may be a factor in influencing their preferences. If such is the case, it only adds to the value of the club work.

Anna Wehr, Carbon County, Pa., learned proper methods of strawberry culture under the direction of County Agent N. M. Rahn and State College specialists. Her patch of one-twentieth of an acre produced 1060 quarts of berries last summer and returned a handsome profit.

Fifty-seven per cent of the farm boys indicated they expected to become farmers, ten per cent preferred work dealing with engineering of some sort, six per cent wanted to be mechanics and six per cent expect to enter the professions of medicine, law, education, etc.

A surprise was sprung by the farm girls, fifty-five per cent of whom indicated a preference for teaching. Business activities, stenography, etc., claimed next attention with fifteen per cent; nursing and social service work, seven per cent; professions, one per cent, while five per cent were at sea on the matter and could indicate no choice.

From the questionnaire replies and discussions in the group conferences it is apparent that one of the problems of our rural youth is the provision of satisfactory employment in rural sections for farm girls after they have completed their school work. It was pointed out that the boys work for their parents or neighbors, find employment on state highways and in shops, but that at present there are few ways for farm girls to find satisfactory remunerative employment near at home.

Is it out of the way to raise the question as to whether or not the girls should not receive monetary compensation for their services in the household? Is not such labor at home, or with relatives or neighbors, just as dignified as farm and highway labor is for the boys, and entitled to the same recognition?

In this connection, it is interesting to note that the town girls had about the same occupational preferences as the farm girls, while town boys were practically evenly divided as between farming, engineering, mechanical and professional occupations.

Farm Work Appeals to Majority

Despite long hours and multitudinous chores, the liking of the farm work itself was the leading factor listed in the reasons for liking farm life. The appeal of growing plants and animals, healthy living conditions and facilities, and recreational advantages were next in order. School and social advantages came last in the list for farm boys and girls, but first in the estimation of the town boys and girls.

It is interesting to note that farm boys and girls are as well satisfied as their village cousins with their recreational opportunities. Apparently the old swimmin' hole and the ever familiar horseshoes have a strong appeal.

Town boys and girls apparently read daily newspapers and magazines for boys and girls to a much greater extent than do their farmer friends, altho the farm girls are apparently better off than their brothers in this regard. A very large percentage of farm boys, however, are regular readers of the farm press.

When an Ear of Corn Meant Barley

By CARL R. WOODWARD

New Jersey State College of Agriculture

ONE of the best available accounts of farming in Pennsylvania in the seventeenth century is found in a letter by Dr. Nicholas More, first speaker of the Provincial Assembly in 1682, and first chief justice of Pennsylvania. He had extensive land-holdings, of more than 10,000 acres in Philadelphia and Montgomery Counties. His country seat was located 13 miles northwest of the Philadelphia of his day, about one-half mile west of the present Somerton. On September 13, 1686, he addressed a letter to William Penn, which the latter subsequently published for the purpose of refuting malicious reports that had been circulated about the new colony.

"Our lands have been grateful to us," he wrote, "and have begun to reward our laborers by abounding crops of corn this year." Then, after discoursing on the abundance of the various kinds of produce, and their market price, he gave an account of his own and his neighbor's farm experiences. His practical test of the rotation now so commonly observed, viz., winter grain following corn, is of special interest:

"The last year I did plant about twelve Acres of Indian Corn, and when it came off the Ground, I did only cause the Ground to be Harrowed, and upon that I did sow both Wheat and Rye, at which many laughed, saying, that I could not expect any Corn from what I had sowed, the land wanting more labour, yet I had this Year as good Wheat and Rye upon it, as was to be found in any other place, and that very bright Corn.

"I have had a good Crop of Barley and Oats and whereas my People did not use my Barley well, so that much was shed upon the Ground, I caused it immediately to be Plowed in, and is now growing, keeping a good Colour, and I am in hope of another Crop of Barley, having good Ears tho the Straws be shorter. I did plant an Hopp-Garden this Spring, which is now exceeding full of Hopps, at which all English People admire."

"Corn" Was a General Term for "Grain"

It should be remembered, in this connection, that in Doctor More's time the term "corn" was used in the same sense as we now use "grain." And "ears of corn" usually meant "heads of grain." Doctor More continued to relate something of his neighbors' experience in grain growing:

"Richard Collet and Samuel Carpenter, etc., having had some fields of Rye the last Summer, and plowed the Stuble in order to sow other Corn, by some Casualty could not sow their Fields, yet have they had considerable crops of Rye, in the said Fields, by what had been shed on the ground in Harvest time."

The abundance of yield which delighted the heart of the husbandman is brought out in the following passage:

"I have had seventy Ears of Rye upon one single Root, proceeding from one single Corn; forty five of Wheat; eighty of Oats; ten, twelve and fourteen of Barley out of one Grain, and there was in it forty five grains on that Ear; above three Thousand of Oats from one single Corn, and some I had, that had much more, but it would seem a Romance rather than a Truth, if I should speak what I have seen in these things."

Vegetables, too, excelled in quality and in yield, and the writer concludes that Pennsylvania has some very decided advantages over England in the pursuit of agriculture:

"I had the last year as good Turnops, Carrots and Parsnops as could be expected, and in no wise inferior to those in London, the parsnops better, and of a great bigness; my Children have found out a way of Rosting them in the Embers, and ate as good as Barbadoes-Potatoes, insomuch that it is now become a dish with us. We have had admirable English Pease this summer; every one here is now persuaded of the fertility of the ground, and goodness of the climate, here being nothing wanting, with industry, that grows in England, and many delicious things, not attainable there; and we have this common advantage above England that all things grow better, and with less labour."

Vol. 95, No. 25 Phila., Pa., June 18, 1927 Whole No. 1570

OUR JOB is to serve our readers. Whenever you are puzzled write to us and we will help you if we can.

It is not difficult to dodge our responsibilities; but we cannot dodge the consequences of dodging our responsibilities.

General Business Conditions

THE summary of the national business conditions for May, as made by the National City Bank of New York states that the situation has continued satisfactory. Employment conditions are good and money is abundant for business purposes. The high spots in the adverse conditions are: The mounting destruction caused by the Mississippi flood, the poor crop weather in the West, the general downward tendency in non-agricultural commodity prices, and the serious over-production of oil.

On the other hand, the steel industry continues to operate at high levels, building construction goes on at a good pace, the automobile industry is operating in high, the trade in electric supplies is good, and the export trade is in good condition. On the whole, business is averaging fully up to or above normal.

Competition in the Egg Market

A SUBSCRIBER wants to know why it is that eggs from the Pacific Coast top the New York market. He suggests that there is "something rotten in Denmark" that this is the case, and thinks something should be done about it. He does not think it reasonable that eggs shipped nearly 3000 miles should sell for a higher price than nearby eggs.

Well, we do not know anything about the decay prevalent in Denmark, but we do know that there have been rotten eggs sent to market from the farms of the United States, but few if any of them have come from the Pacific Coast. Here are the reasons why eggs from that section sell at top-notch prices:

Necessity forced the egg producers of the Pacific Coast to produce and ship only the very choicest eggs. Poultrymen gather their eggs two and three times a day, and place them in cool, airy rooms. They ship them early and often, never holding back for a rise in the market. Eggs are officially candled and inspected before being shipped. In summer the cars are iced and sent by fast express. All market eggs are infertile. The marketing is done by up-to-date, cooperative organizations with good business men at the head of them. These and other reasons have made the buyer confident when he buys their eggs that they are A No. 1 in every respect. No moral is necessary to point the lesson.

For More Leisure

A CITY man who lives in the country, and keeps an observing eye on people about him, recently said in reference to the oft-repeated assertion of farmers that they work sixteen hours a day, "I don't believe it. I never knew a farmer who put in sixteen hours a day the year 'round. True, there are times in summer when the days are very long, but if he counts all the time off in the course of a year I am certain that he actually works no more in a year than does a successful business man."

The evident desire of most people is to attain greater leisure. City people have their summer vacations, usually two weeks in length. With most of them, that is all they have during the year. Of course, their office or shop hours are not so long, but it would be interesting to learn just how many hours the average farmer puts in at actual work in the course of a year. City people say they are awake more hours in the twenty-four than are farm people.

Anyway, let's try to plan our work so that there is more leisure time. It can be done, because some have done it.

Rural Electric Rates

IT WILL be gratifying news to farmers to learn that the foremost electric and power companies are studying how to finance rural extensions without making it impossible or burdensome for farmers to obtain electric service. The Rural Service Committee of the National Electric Light Association recently made a report of its study, containing the following:

"The successful development of rural electrification depends in no small measure upon having a rate form particularly adapted to the agricultural field. It is most gratifying to be able to report that there is a distinct tendency on the part of those light and power companies who have given this matter thoro consideration to develop rate forms which provide for the financing of line construction by the utility, thereby making the farmer's capital available for the purchase of utilization equipment."

While there are different forms of rural rates in use, there seems to be a general tendency towards standardization in two general types, viz:

(a). A monthly service charge plus a relatively low energy rate, usually in two steps.

(b). A guaranteed minimum yearly revenue with various step energy rates.

The investigation shows that farm electrification has been making steady gains in spite of the very general depression in agriculture the past few years, and that the later extensions show a greater variety of uses than the original installations.

Students at State College

A COLUMNIST in a Philadelphia paper, after calling attention to the fact that there are only 550 students studying agriculture at State College while there are 3000 enrolled in other courses, asks this question. "What's the matter with Pennsylvania farming when only 550 young people in a population of 9,000,000 go to learn more about how to do it?"

Many answers might be made to this question, any one of which would be, at least partially, sufficient. In the first place, one may farm with more or less success without a college education, while it is legally and practically impossible to be a lawyer, a doctor, a dentist, or a practitioner in any one of a number of professions without extensive training. In the second place, the industrial development of Pennsylvania has been so great and so prosperous that the industries have been able to offer greater financial inducements to young men than agriculture afforded and the young people have been attracted into business and professional life. No doubt a large proportion of the 550 will find positions in this direction also. In the third place, the live intelligent farmers have been and are profiting by the work of the college and experiment station while engaged in practical agriculture.

The farming population of the state comprises only about one-tenth of the total population, and in this number a very large proportion cannot afford the time or money necessary to send their boys and girls to college even if they desired to do so.

We hope the time will speedily come when all this will be changed, and the enrolment of farm boys and girls at the agricultural colleges will compare favorably with those from any other business, and that the young people will pursue the agricultural and economic courses with the purpose of actually engaging them as a life business.

Nominate Your Best Farmer

THERE are several sections of the territory covered by Pennsylvania Farmer not yet represented by a nominee for the Master Farmer Award. In order to have the largest number possible, and so that the four states named may be fairly represented, we urge readers to hunt up the issue of May 14, read the article on page three and fill out the score card for the best farmer in your neighborhood. In case you have mislaid the paper, send to this office and ask for a card and instructions.

The Master Farmer Award is a big thing and every community fortunate enough to have a farmer in at the close will be proud of the fact. The time for making nominations is getting short—four weeks only until July 15—and we urge promptness in sending them in. Simply address Master Farmer Editor, 261 South Third St., Philadelphia.

Reconstruction in Flood Area

THE floods have subsided in most of the inundated area and the work of planting and reconstruction is going on. Every calamity is conducive of some blessings, and in the case of the flood the reduction of the cotton crop is one. It is estimated that the total cotton crop may be less this year than last by 1,000,000 pounds, and this is even less than was proposed as a voluntary reduction. The flooded lands have received deposits of silt and mud which no doubt will increase their fertility, even tho it has come from other farm lands. Corn, which requires a shorter time to grow than cotton, will be planted in larger amounts than usual. The great loss is in the destroyed homes, barns, livestock and personal effects. Time and assistance from others will in time rehabilitate the unfortunate area, but the nation owes it to this great country to make a recurrence of the flood impossible.

ASK RESEARCH MONEY

Agricultural Interests Call on President Bureau of Education Entertains Great Expectations from Survey.

Washington, D. C.

A FORWARD step in the movement for larger appropriations for research work in the Department of Agriculture was taken when a large group representing agriculture and other industries called on President Coolidge and pointed out to him the need for an expansion all along the lines of agricultural research.

In this group were Fred Brenckman, representing the National Grange; E. P. Cohill, of the American Farm Bureau Federation, Charles W. Holman, secretary of the National Cooperative Milk Producers Federation; A. M. Loomis, of the American Dairy Federation; Wilson Compton, secretary National Association of Lumber Manufacturers, Henry H. Lewis, managing director Better Understanding Between Industry and Agriculture, Henry R. Rice, director National Automobile Chamber of Commerce, C. G. Woodbury, director National Canners' Association; Charles J. Brand, National Association of Fertilizer Manufacturers; R. L. French, secretary National League of Commission Merchants, and H. A. Austin, of the United States Sugar Manufacturers' Association.

Where the Money Went

A total of $10,300,000 was expended on work which is classified as research in the Department of Agriculture during the last fiscal year. More than one-half of this amount went to the Bureaus of Plant Industry, Entomology and Agricultural Economics. A strongly organized effort will be made to get a much larger sum included in the appropriations for research work for the next fiscal year.

Land Grant College Survey

The land grant colleges are to be modernized along educational lines and their work correlated so as to prevent needless overlapping of activities, if the results of the survey to be begun in July by the Bureau of Education, Department of Agriculture, meets the expectations of Dr. John J. Tigert, Commissioner of Education. The survey is to be completed within two years and is to cost $117,000. The executive committee of the American Association of Land Grant Colleges has tendered its full cooperation with the Bureau of Education in making this survey of the work of the agricultural colleges.

Europeans Want In

Encouraged by anti-immigration restriction propagandists in the United States, a vast horde of foreigners are seeking for admission into this country. Applications of more than 1,500,000 foreigners to enter the United States are pending in American consulates abroad, and millions more are anxiously awaiting the time when the foes of restricted immigration in Congress may be able to overturn the law and open the floodgates to southern Europe.

The first move in the next Congress will be to amend the immigration law by changing the clause apportioning the quotas among the several European countries so that a larger number of people from southern Europe can be admitted. The next move will be to scrap the entire immigration restriction provisions of the law.

Catching Up with Others

The United States is lagging far behind other leading nations in the production of atmospheric nitrogen by fixation. Nevertheless there are seven plants now in operation in this country producing atmospheric nitrogen whereas five years ago there were none. These seven plants have a capacity of 80 tons of nitrogen a day, or about 24,000 tons a year. In a statement issued by the Department of Agriculture it is said that while none of this output is finding its way as yet into agricultural use, it is having the indirect effect of forcing additional quantities of by-product ammonia into the fertilizer market. Growth of the nitrogen fixation industry in the United States is certain eventually to be an important factor in promoting soil fertility.—E. E. R.

ESTIMATES VARY

Thru Census It Is Hoped to Determine Actual Amount Invested in Agriculture—Plan New Game Preserves.

Harrisburg, Pa.

ONE of the prime objects of the census of Pennsylvania farms to be undertaken this year and carried into 1928, together with the triennial assessment of properties, will be to ascertain just how much money is invested in farming in this state. There have been various estimates which show there is more money in agriculture than in mining or iron and steel, but the effort will be to get closer to the facts, the thought at the State Capitol being that the sum is greater than many have believed. Fluctuations of values of various staple crops have caused many inquiries and the total values for 1926 are in what might be termed the gratifying class. The farm census starts in western Pennsylvania.

Bell Takes Charge

R. H. Bell, newly appointed chief of the Bureau of Plant Industry in the State Department of Agriculture, has been presented by Secretary Charles G. Jordan as a Pennsylvanian with the requisite scientific knowledge and the rural viewpoint. Mr. Bell succeeds Dr. C. H. Hadley, who resigned to go to Ohio to direct corn borer men, and comes to the Capitol after work at State College and much experience in the field. He is about to undertake a general survey of the counties where preventive work is under way and will personally inspect the quarantine work against the pests.

Many Herds Wait Test

According to figures at the State Bureau of Animal Industry there are about 225 townships in Pennsylvania where cattle are awaiting testing. These townships are in three-fourths of the counties of the state. The number illustrates the manner in which the movement for cleaning up herds is progressing. Close to half the cattle are under official supervision. This is considered by people at the Capitol to be a remarkable record considering the situation a decade ago.

Thousands to Be Spent

Plans of the State Game Commission call for expenditure of many thousands of dollars not only for lands, but for game protective and propagation work this summer. The program to be outlined at the July meeting will be one of the most extensive in this part of the country it is said. Surveys for new lands are being made and preserves will be widely scattered. One of the items will be care for game in winter. It is probable the situation in regard to deer raiding fields will come up again this summer.

Policy Remains Unchanged

Thus far appointments to various boards of control by Governor Fisher show no "ripping." There have been numerous changes, but in many instances men and women serving on boards or commissions in years gone by have been named again so there will be continuity of policy at least. Most of the counties will have appointments made of mothers pension boards in part during the summer. Half or dozen commissions to make codifications of laws are to be named soon.

T. B. LOSING FOOTHOLD

County Concludes Big Drive—Trenton Fair Grounds Attract Cattle Buyers—Sign of Fair Dealing Displayed.

Trenton, N. J.

THE Cape May County Board of Agriculture has concluded a drive to clean up bovine tuberculosis in the county. In early June the reports on 500 dairy cows were concluded, showing up only four per cent reactors. Many requests are coming in asking for assistance from dairymen not previously included in the drive.

Gas Tax Effective Next Month

The new gas tax passed by the last New Jersey Legislature becomes effective July 1st. It contains exemptions for tractors, domestic purposes, buses and motor boats. The tax is collectible at the retail selling stations and collections are to be made between the first and tenth of each month. The stations will be licensed by the Motor Vehicle Department which is in charge of the tax collection.

The $30,000,000 bond issue proposed to continue New Jersey's good roads program is being discussed at summer meetings of farmers thruout the state. The bond issue proposal was passed by the Legislature last winter and will come up for popular vote at the fall elections.

Sales at Fair Grounds

Two cattle sales of national interest were held on the State Fair Grounds at Trenton, June 2 and 3rd. On the first day something over 100 head of fine Jerseys were consigned for sale by 28 owners from all parts of the country. On the second day 49 lots of Guernsey cattle were represented. Buyers were present from many states and the animals went under the hammer at good prices. This year is the first season that the Trenton Fair Grounds have been used for such important sales.

Roadside Association Progressing

The Farmers' Roadside Market Association of New Jersey is beginning its summer activities and with reduced membership fees is hopeful of bringing in more stand owners under the standard marketing program. The members of the association are accredited by the New Jersey State Bureau of Markets, which inspects the stands and prescribes regulations that govern packing and marketing of home-grown products by the membership. Members of the association are conspicuous by a sign representing an ear of corn, surcharged with the name of the association and appearing before each stand as a certificate of fair dealing with the public.

Holstein Program Arranged

The Holstein Club of Hunterdon County, meeting at Flemington recently, arranged a program for its membership for the summer. In August the club will cooperate with the Hunterdon County Board of Agriculture in arranging a county-wide tour of leading dairies. The club will also visit the Walker-Gordon farms at Plainsboro in conjunction with the event. Another field meeting has been planned for September, and in October the club will hold its annual meeting and banquet, at which time non-members in the county will be invited to attend.—W. H. B.

ULSTER CELEBRATES

Hudson River Valley Plans Huge Historical Pageant—New Statewide System of Markets Will Be Developed.

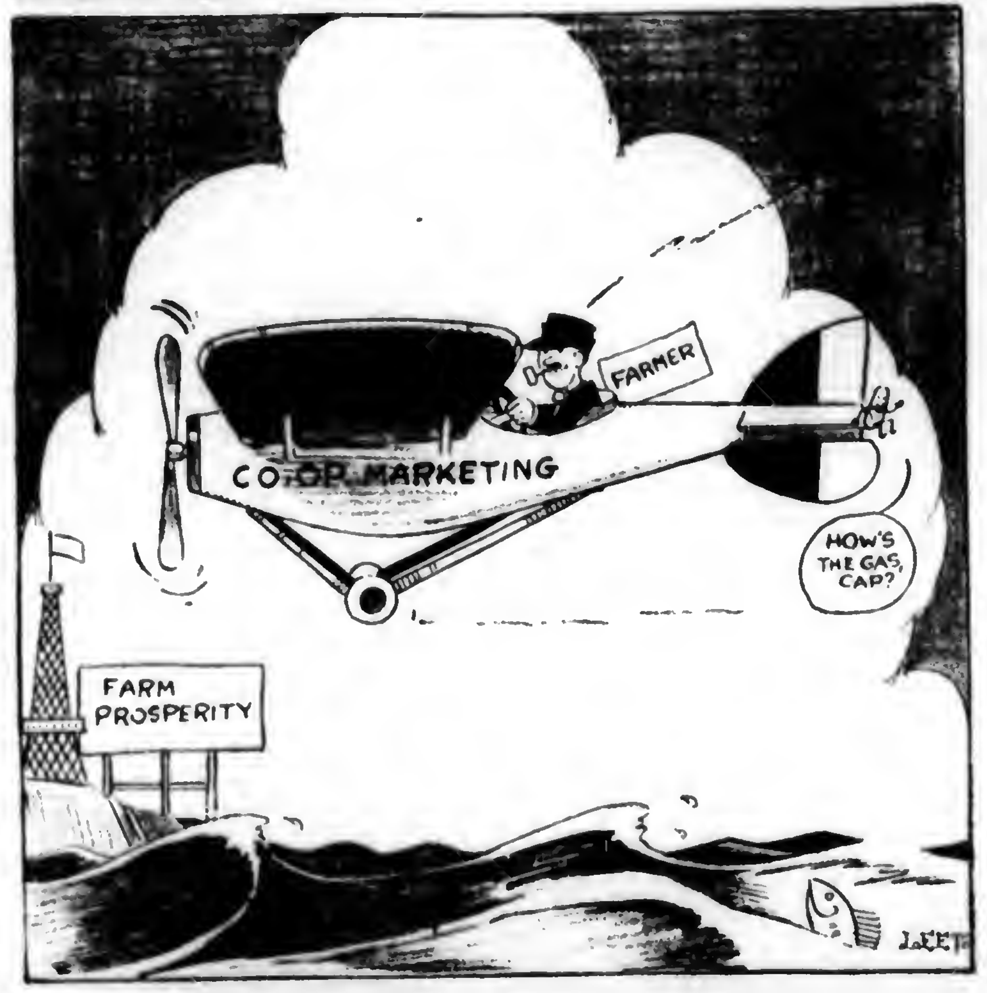
Ithaca, N. Y.

THIS is a year of anniversary celebrations and the Hudson River Valley is rich in historical associations. Ulster County seems to be the logical center for activities marking the sesqui-centennial of many of the events of early days. Hence the rural people, thru their farm and home bureau organizations are joining the Kingston Chamber of Commerce in plans to put on a historical pageant on a scale never before attempted. About 1800 people are actively rehearsing their parts. The cooperation between the city and rural population is splendid. The great event fills the day of Thursday, June 30th. Any community or state interested in seeing the pageant will do well to send representatives.

Curb Markets Favored

Improved marketing methods, with special helps for rural women and girls in disposing of the work of their hands to better advantage, have been discussed at recent district meetings of the Home Bureau Federation. H. D. Phillips, director of the State Bureau of Markets, recommends the development of a new state-wide system of marketing that would help the individual rather than the larger cooperative associations. He believes it possible to divide the state into districts with a primary market in the leading centrally located city in that district with secondary improved types of curb or other markets in the secondary cities and larger towns with standardized or improved roadside markets on the main highways.—M. G. F.

ANOTHER LONG DISTANCE FLYER



HOW WELL do you know the Hardware Man and his store?

IF YOU could spend a week in a "Farm Service" Hardware Store you would get the surprise of your life. You would find many things you never saw or heard of before. To learn all the different items, know their names, uses and sizes is a life time study. Your Hardware Man is constantly seeing and inspecting new materials and inventions, using his long training to pick out the good and discarding the worthless so that he can have just the right things to offer you—those adapted to your climate, your working conditions, and your modes and desires of living.

Go to a "Farm Service" Store and look around—you are always welcome. Go there when you want a good tool, a repair part for the stove or mower, a piece of pipe, new kitchen utensils, or the best paint or material for some odd job. You'll get what you want right then and there and you can be sure the quality and price will be right.

A Farmer's Store

"Farm Service" stores specialize on the farmer's needs and problems. They offer you more for your money than you can buy in any other way by giving merchandise of established value at a fair price. In these stores you will discover short-cut ways to do things, articles that will save your time, your temper, your money, and make your life more comfortable. Make a practice of going to your "Farm Service" Hardware Store. It pays!

NEXT WEEK
Will be the first of a series of messages about seasonable Hardware you need.

BUY WHERE YOU SEE THIS TAG

It's a pledge of better storekeeping for everybody's benefit

NESHAMINY GARDENS

WHERE AN EDITOR WORKS AND THINKS

BY R. P. KESTER

THE Cobblers are growing nicely and the foliage is green and vigorous. The advance guards of the potato bug crop are on the job, altho not in great numbers. Usually we don't bother about these hard-shells, since they do not eat a great deal and they are rather snoopy about eating poison anyway. But the necessity for action comes when the eggs hatch a few days later. The bugs are voracious eaters in the soft-body stage, and the quicker they get a meal of Paris green or arsenate of lead the better.

✦ ✦ ✦

THE late potatoes from our own seed are coming up very well and look good. Of course, only time will tell whether we were wise in going counter to the experience and custom of the neighborhood in planting home-grown potato seed, especially since the crop last year was not a world-beater with us. So far, the season has been favorable for potatoes as they do best in cool weather and sufficient moisture, and goodness knows we have had plenty of both this season.

✦ ✦ ✦

AGAIN we will try our luck with cantaloupes. (You will notice I have adopted the common term since I found it impossible to teach people to call them by their right name.—muskmelons.) We planted about two acres, using an alfalfa sod. The ground was marked out and a good handful of a 4-8-6 fertilizer spread at each intersection. The soil was then drawn into flat hills about three inches high, thus mixing the fertilizer with the soil, and eight to ten seeds placed in a hill. The ground has a slight southern slope and warms up readily. They should have been planted a few days earlier, but it is of no use to plant melons until there is a probability that the soil will remain warm.

✦ ✦ ✦

THE Leghorn chicks continue to thrive. They are just five weeks old as this is written, and by weighing a representative bunch we find they average a little over ten ounces each. They are fully feathered and eat all the time they are not drinking water. The cockerels will be separated from the pullets this week and be fed so that they can be marketed as soon as possible. A young rooster that tries to crow at five weeks of age is going some, and that is what these are doing.

✦ ✦ ✦

IN LOOKING over The New York Packer, a newspaper devoted to the produce and fruit trade, I find the following headlines in the current issue: "Little Change in the Watermelon Acreage in Florida." . . . "Melon Production in Georgia May Be Cut by Drought." . . . "Optimism Rules in Imperial Valley Cantaloupe Region." . . . "Advance in Potato Prices Brings Thrill in New York Market." . . . "Railroads Quit Boosting Acreage to Farmers." . . . "Early Peaches in Georgia Running Under Estimates." . . . "Apple Growers Unite to Advertise Apple." . . . "Western New York Fruit Crops Short."

✦ ✦ ✦

MOST of the rural schools have closed and the pupils are home again ready to help father and mother; at least I hope they are ready and willing. If the rural school teacher to whom they went for instruction was fit for her position, every child knows more about, and appreciates better, the things of the country than he did before. But if the teacher was "city minded" and held up as ideals other things, the students are probably dreaming of something else than farming. "As the twig is bent, the tree is inclined."

Life's Darkest Moment

Slim—When do you do your hardest work?

Fat—Before breakfast always.

Slim—What do you do?

Fat—Try to get outa bed.—Boys' Life.

The Cheerful Plowman

The Counter Hunter

"STOP in and buy a yard of crash," my good wife said to me, "'twill take one minute, here's the cash; now go to Land and Lee!" Of course, I said that I was glad to do that little chore, the kind of task I think I had done ninety times before! I sought the store as I was told, the counter that I knew, but Oh, my heart grew sick and cold, for there was Nan McGrew! Now, Nan, she is the maiden aunt of my third cousin Lore and how that woman loves to haunt the counters of a store!

"I'll look at that" she told the clerk who brought a bolt of tweed, "For my peculiar kind of work that may be what I need." It didn't suit,—how could it suit? So, something else was found, while I, harassed enough to shoot, sat idly by and frowned! The little clerk, half bored to death, showed this, and that, and those, showed colors till she lost her breath, green, purple, white and rose! But nothing on the shelf was right for Nan's especial need, no goods were found to fit her plight, from loaded silk to tweed!

At last when Nan had seen the store, each item on the shelf, and just before I toppled o'er, I got a chance myself! It took two seconds and a third for me to buy and pay, and in three seconds, on my word, I was upon my way! Oh why, oh why, are pests like Nan allowed upon the earth? They do not, and they never can, know how much time is worth! Those clerks I claim, need sympathy as long as there's a Nan, and they shall get it, too, from me, as long as I'm a man! These counter haunters, how they steal! I claim it is a crime! From clerk and customers, I feel, they're filching honest time!—J. Edw. Tufft.

Road Patrol Will Check Beetle

STARTING June 15 and continuing until October 15, all important roads leading out of the Japanese beetle quarantine area in southeastern Pennsylvania will be patrolled and inspections made of vehicles to check the spread of the beetles in farm products and cut flowers, according to plans made public by the State Department of Agriculture.

The road inspectors will be on the job 24 hours a day and will be kept busy seven days a week. They will be given orders to intercept any vehicle passing out of the quarantine area that is carrying any product enumerated in the regulations, which has not been certified as free of beetles.

The State and Federal Governments, as in the past, will prosecute persons who violate the quarantine. Last year, one party was fined $100 for grossly disregarding the regulations. However, the public, realizing the danger of spreading the beetles, has been very willing to cooperate and in only a few cases has it been necessary to resort to legal measures.

In addition to the road patrols, offices for district supervisors have been established at Allentown, Hamburg, Harrisburg, Lancaster, Lebanon, Norristown and Oxford (Chester County). These supervisors will certify products for transportation from the beetle area.

The Harrisburg office will be in the Bureau of Plant Industry in the South Office Building, with W. N. Dobbs in charge.

J. K. Gould, who has been associated with the Japanese beetle work in Pennsylvania and New Jersey for the past five years, is in charge of the quarantine enforcement work in this state. He is stationed at Norristown.—P. D. A.

Did You Know?

PENNSYLVANIA had fewer farm bankruptcies in 1925 than any of the important agricultural states of the Middle West.

PENNSYLVANIA has the second largest number of cold storage concerns and ranks fifth in cold storage space.

PENNSYLVANIA produces more than 85 per cent of the nation's mushroom supply.

PENNSYLVANIA produces more tobacco per acre than any other state.—Weekly News Bulletin, State Department of Agriculture.

Well Fitted for His Job

R. H. BELL, of the Pennsylvania State College, newly appointed Director of the Bureau of Plant Industry, is a native of Huntingdon County, Pa. He was reared on a farm and taught country school for four years. He was graduated from Pennsylvania State College in 1910 and did research work in horticulture for three years. He served as county agent in Lycoming County from 1914 to 1919 and has been assistant director of agricultural extension work in Pennsylvania since 1919.

Better Cut Them Now

CHESTNUT trees killed by the blight lose their bark in two or three years and after that the wood deteriorates rapidly. For this reason, advises New York Extension Forester J. A. Cope, it is best to cut chestnut fence posts now and store them for later needs, rather than let the dead trees stand in the woods.

What price twine!

Getting our money's worth is what counts

BY A THRIFTY FARMER

"If it hadn't been for an argument with my neighbor, I'd probably still be wasting money on binder twine.

"He called me penny-wise. Claimed a saving of a cent or so a pound was not worth the grief of breaks and loose bundles that went with cheap twine. After we argued a while, he said 'Plymouth' twine was really more economical because it was longer per pound than my twine. Right then and there I called his bluff by measuring an 8-pound ball of each.

Plymouth ran 432 feet longer per ball

"Well, I was surprised! My twine averaged only 448 feet—altho it was tagged 500 ft. per pound. His Plymouth gave 502 feet to the pound. I had been paying for 432 ft. per ball that I didn't get. And more tests gave the same results.

"Thus, I learned Plymouth's guaranteed length* means that I get my money's worth. I'd not only been throwing away money on short length twine, but I'd been putting up with needless trouble.

No more breaks or loose bundles

"There are no knots—no weak spots—no breaks, when I use Plymouth. I just sit tight and get more and more sold on Plymouth as the binder throws off row after row of perfect bundles."

*Plymouth Twine is spun 500, 550, 600 and 650 feet to the pound. Look for guaranteed length on tag.

Plymouth—more economical:

the six-point binder twine

1. It's longer—full length to the pound as guaranteed on the tag;
2. It's stronger—less breaking, less wasted time, less wasted grain;
3. It's evener—no thick or thin spots—no "grief";
4. It's better wound—no tangling;
5. It's insect repelling—you can tell by its smell;
6. It's mistake-proof—printed ball—and instruction slip in every bale.

Do you know about PLYMOUTH "GOLD MEDAL" The Wonder Twine 30% longer than Standard

You can easily test Plymouth's length per pound against any other twine. The experiment pictured at the left has been made frequently.

Take a ball of Plymouth and any twine of the same weight and tagged as being the same length per pound and unwind them down the road. Then measure the length. Plymouth twine wins out—7% to 16% longer than cheaper twines.

PLYMOUTH

Important To Employers!

The Workmen's Compensation Act became effective Jan. 1, 1915, but it seems some employers ignore their obligations, intentionally or through misunderstanding. Failure to provide protection to employes makes the employer liable to a heavy fine in addition to the paying of benefits in accordance with the Compensation schedule.

Our Policy furnishes complete protection as required by the Compensation Act, and if the employer wishes, we can protect him against accident, while engaged in his work, or at all times during the day and night.

Our policyholders are receiving a large return premium each year. (17½% was returned to them in 1924 and 1925) when their premiums were above the minimum.

TELL the advertiser you saw adv. in Pennsylvania Farmer.

Do Women Read Advertisements?

DO YOU? Do you clip recipes from the fascinating messages that advertise a new salad oil, a new frying fat, a new cake flour? Do you think twice about your skin, those wrinkles at the corners of your eyes, your tell-tale past-thirty neck because of beauty ads that bring romance about happiness, love and youth?

In planning advertisements, the question is often asked, "Do women read advertisements?" The experienced advertiser answers, "Yes—if they are interesting and instructive to read."

This is the spirit of the best modern advertising. More and more, the ideal is to show you definitely how a new product can work to your well-being, your pleasure in life, your greater happiness. By reading advertisements, you can be a better housewife, a more efficient home manager, a shrewd and thrifty buyer. The advertising pages of this magazine contain information that is valuable and important. If you do not read advertisements, join the large army of women who do, in order to know the best things to buy for yourself, your children and your home.

Reading advertising regularly is keeping up with the times in the most economical way

Rambles of a Pennsylvania Fruit Grower

XIII. Satsuma Oranges on the Gulf Coast

THE most interesting feature of Gulf Coast fruit growing is the Satsuma orange. This fruit was practically unknown fifteen years ago. Now there are 5,000,000 trees planted and hundreds of acres are going out each year. In short, it is experiencing a boom, hence, it should be approached with caution. The planting extends about 200 miles along the Gulf Coast, centering at Mobile, where the oldest groves are found.

The Satsuma was introduced from Japan thirty-five years ago but did not make much of a stir in the horticultural world until about fifteen years ago. It has been grown in Japan for centuries, trees over 300 years old may be seen there. It belongs to the Mandarin or kid glove group of oranges; the skin peels off readily, the pulp divides easily into sections, there are few, if any, seeds, and the fruit is much larger than the tangerine.

Satsuma Withstands Frost

A second talking point for the Satsuma is its hardiness. When grafted on the hardy stock Citrus trifoliata, it withstands temperatures of 15 degrees, or even lower, which would be disastrous to the common orange. I saw young trees, not banked, which came thru the recent January freeze of 14 degrees with no damage whatever, except to some of the leaves.

A third advantage is its earliness. The Satsuma ripens in October and November and is sweet enough to market before the Florida Valencia or California Navels can meet the sugar test. Hence it supplements more than it competes with these varieties and secures the higher prices of the early market.

The trees are set 100 to the acre and are grown bush form, with no trunk whatever. It is wise to bank them with soil until four or five years old. Three to five sprayings are required but practically no pruning except to cut out dead wood. The red spider is one of the worst pests. It is controlled with lime-sulphur spray in cold weather and with dust in hot weather. Fertilization is heavy—from 20 to 30 pounds a tree, costing $50 to $100 annually. After cultivation ceases in July, the crab grass and other weeds make a dense mat of herbage which is kept mowed down; it is not necessary to seed a cover crop.

The Boom Is Still On

The trees begin to bear paying crops in four or five years. The fruit ripens in October and November and can hang until March. An advantage of early picking is that the fruit is in less danger of freezes, which rarely come before January. The cost of production is less than for Valencias and the selling price, thus far, considerably higher. A heavily loaded Satsuma tree is a beautiful sight. I saw one twelve-year-old tree which bore 2200 fruits.

The Satsuma boom is still at a rather high temperature, hence it is difficult to make a conservative estimate of it. I was told by the manager of the Noble farm, seven miles east of Mobile, that the fifty-five-acre grove grossed $100,000 and netted $70,000 last year. Fifteen-year-old trees bear $80 worth of fruit. These big stories, however, make little impression on one who has seen the rise and fall of many fruit-growing booms and knows that these high prices are likely not to be a fair measure of future conditions.

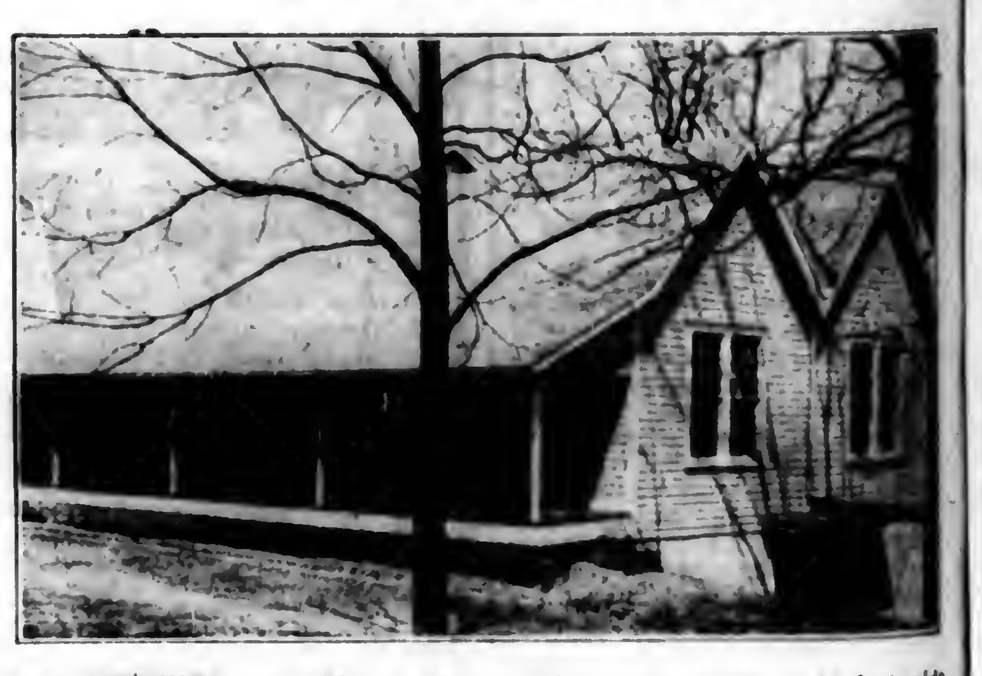
On the Noble farm I saw striking evidence of the value of elevation. Most of the grove withstood a temperature of 10 degrees in 1924 but trees on dips only a few feet lower were killed. I am satisfied that less than half the planting on the Gulf Coast will be successful, because of poor sites, poor soil, or indifferent care. The Gulf Coast people claim that the Satsuma cannot be grown to advantage except in their favored region. This remains to be seen. There are a number of large promotion enterprises which sell Satsuma groves when one year old, in tracts of one to ten acres, for $500 an acre or more, the promoters to care for the trees until the fourth year. These propositions are evidence of inflation and exploitation and will bear cautious investigation.

Arbor Facilitates Spraying

There are other interesting fruit-growing enterprises along the Gulf Coast. Grapes are grown on a three-wire horizontal arm trellis, one wire at each end of an 18-inch arm and one lower wire thru the posts, instead of on the vertical trellis common in the north. This forms a canopy of leaves beneath which the clusters hang in the shade and are free from the vines, so that they may be sprayed and harvested easily. The Concord and other northern varieties are not successful here and are replaced by hybrids of southern species, especially the Carman, Ellen Scott and Munson. Three-year-old vines often bear twenty-five pounds of grapes. Anthracnose and black rot are serious and for these the copper lime dust is most effective. Pear blight is so serious that only the Chinese sand pears can be grown. The fruit of this is inedible except for canning and so hard it would dent a rock. A few profitable peach orchards, mostly Elberta, enter the market just ahead of Fort Valley.

The fruit industry of the Gulf Coast is still in the pioneer stage. Most of the pioneers are northern men who have been attracted to the coast by the "all-year-round climate." The rains come in a torrential down-pour at times but are quickly absorbed by the sandy soil. To one who desires to live in a level country, who prefers sandy soil and a mild climate, the Gulf Coast has its attractions.—S. W. Fletcher.

One Year Proved the Worth of This Common Storage



DICKENSHIED and Weinberger, leading orchardists of Lehigh County, Pa., have recently built a large concrete cellar with a capacity of 8000 bushels. They selected a hillside near the other farmers as the best location for the new structure as it gives access to and from the storage from the orchard as well as the public road. The driveway thru the cellars permits quick and easy loading and unloading.

The storage proper is 30 feet wide, 80 feet long and 10 feet high. The walls are concrete while the floor is earth provided with a raised wooden slat floor in the storage chambers.

The second floor is used to pack and grade the fruit. The packing room is equipped with several large windows to supply the workers with plenty of sunlight. In addition the whole building is wired to furnish electric light.—N. S. Grubbs.

Hort Society Starts Investigation

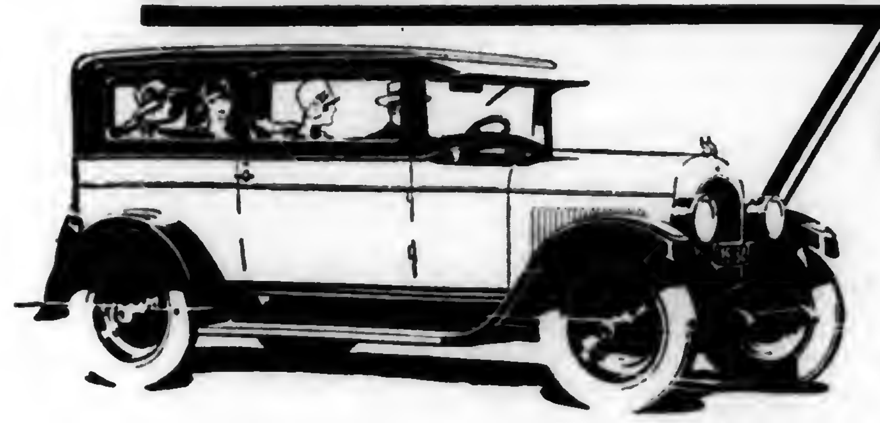
THE Executive Committee of the The New Jersey Horticultural Society, thru its president Joseph Barton, Marlton, has started an investigation and study of the package situation as it applies to the packing and the marketing of New Jersey fruits and vegetables.

At a recent conference with the State Department of Agriculture, the Experiment Station and several other state and federal agencies, Mr. Hershel M. Jones, of the H. M. Jones Marketing Service, New York, told the fruit growers that the package was secondary to grade and quality when it came to selling fruit under present competitive conditions. Mr. Jones stressed the point that poor quality fruit could never be sold in direct competition and command the same price as high quality fruit packed in ordinary packages.

As a result of this conference, the fruit growers formulated plans to make a comprehensive study this summer of the costs in this state of the growing, packing and grading of first class and ordinary apples and peaches. Another phase of marketing will have to do with the selling prices on fruits that are bruised in comparison with other packs that have been carefully handled.

Some markets prefer certain packages and grades while other cities want an entirely different package. A study is to be made of some of these important markets including net returns to growers and marketing costs.—A. K.

Performance and Comfort Unequaled at Its Price



$750 to $830 f. o. b. Detroit

WE ARE eager to have you ride in the Chrysler "50" and drive it, fully confident that the moment you compare it with any car approximating its own price—you will not fail to choose the Chrysler "50".

In speed, acceleration and economy, as well as in trimness of appearance, the sweeping superiority of the Chrysler "50" over the other cars in its price field is one of the reasons why public preference has—within the past eight months—shot Chrysler forward to fourth place among the world's greatest motor car manufacturers.

In its characteristic Chrysler fleetness and dash, its smoothness throughout its entire speed range, its economy, its full-sized roominess for adult passengers, its smartness of line and coloring, indisputable value proclaims the "50" as far and away the greatest offering at its price.

Chrysler "50" Features
50 miles and more an hour;
5 to 25 miles in 8 seconds;
25 miles to the gallon;
Full-sized, with ample seating capacity for adult passengers;
Mohair plush upholstery.

More Eggs

"To Whom It May Concern, Particularly Poultrymen:

ABOUT five months ago in December, I was on the verge of selling all my chickens because I was not getting an egg. Along came Mr. Schrader and guaranteed to send me something to make my hens lay. It was a new feed to me, called B B (BULL BRAND).

At the end of the first week, I got a few eggs. In two weeks, 50% of my birds laid, and in three weeks, 80% of my fowls were producing.

I have fed several laying mashes, but can conscientiously say that B B (BULL BRAND) Laying Mash excels them all and I shall be a user of this feed as long as it is made. If you have any hens not laying or if you think they should do better, my advice is, use B B (BULL BRAND) Laying Mash.

Yours,
Charles Felleger, Pennsylvania."

Staff Contributor and Adviser
Glenview Farm

Rheumatic Geese

My geese hatched very well. Out of 31 eggs I got 30 geese. They did fine until about three or four weeks old then they got lame and some cannot walk at all. They eat well. I thought it might be this damp weather.—Mrs. N. P., Lycoming County, Pa.

Altho a water fowl, geese do not seem to be able to put up with damp quarters without getting the rheumatism, and I feel that the wet weather we have been having is no doubt the cause of the lameness in your goslings. I suggest that you add a teacupful of cod liver oil to the mash that you are using for every twenty-five pounds of mash.

Of course, the goslings must have a warm dry house in which to spend the night and damp days. I always found it fatal to them to get wet and cold, and prefer to keep them out of the wet until fairly well feathered.—R. L. Scharring-Hausen.

He Followed Advice

I have read in Pennsylvania Farmer that Mr. Scharring-Hausen raises his chicks according to the recommendations of the New Jersey Experiment Station with good results. We bought 700 and have given them our best care but have lost over half of them. We would like to start a new batch next month.—Mrs. D. H. R., Schuylkill County, Pa.

I just received a letter from a man who had written in some time ago about trouble with his chicks. I recommended the feeding methods I am going to describe as a remedy, and in his second letter he told me that he followed the advice and now has the best flock he ever had. I hope you have the same good results.

The mash formula is as follows: 20 lbs. bran, 20 lbs. red dog flour, 20 lbs. cornmeal (yellow), 20 lbs. ground rolled oats, 10 lbs. meat scrap (20 per cent), 5 lbs. dried milk, 2 lbs. oyster shell meal, 1 qt. cod liver oil, 1 lb. salt.

The scratch grain is 2 parts fine yellow cracked corn and one part fine cracked wheat.

Feeding Directions

First three days: Liquid milk to drink. Sour skimmilk or condensed buttermilk diluted 1 to 7 with water.

Three days to one week: Feed mash twice daily, scratch three times daily, what they will clean up in twenty minutes. If milk is given to drink, also give water.

One week on: Free access to mash in hoppers, scratch feed three times daily, green feed starting in small amounts until they are getting all they will eat in 20 minutes.

Further information is contained in Circular 199 of the New Jersey State Experiment Station, New Brunswick, N. J.—R. L. Scharring-Hausen.

Can Baby Chicks Eat Too Much?

Can baby chicks a few days old get enlarged crop, if so, what causes it and what remedy would you suggest? Also, what causes the wing feathers to grow so much faster than the body? They seem to have awful appetites and want to be eating all the time. Am feeding growing mash and some charcoal. Would it be all right to mix grain with the mash?—J. D., Wayne County, Pa.

I do not think that small baby chicks would be liable to get enlarged crop such as occurs in older birds. Of course, if they ate a lot of indigestible litter they might get crop bound, and if they ate a lot of dry mash without sufficient water to moisten it that might cause trouble.

It is a good sign when chicks have voracious appetites, and if they stuff themselves until they hang down in front they are happy. You will probably note that the feed passes out of the crop into the gizzard and the crop contracts to normal size. The function of the crop is to store food while it is being moistened and prepared for digestion.

Chicks seem to vary in the proportion of grain to mash eaten at various stages of their growth. You will remember that Mr. Kester stated that his chicks had eaten more mash than grain in the first few weeks of their existence. It would do no harm to mix a little grain with the mash if the chicks seem to require it. But I wouldn't worry too much about it.

I notice that wrong temperature conditions interfere with proper feather growth, especially if the chicks are too cool.—R. L. Scharring-Hausen.

NEST BOX NOTES

GREEN feed must be supplied to the laying hens thruout the summer if production is to be kept up. We just had an example of what lack of greens will do, when a flock that had been short of green feed for a short while went down in production, and immediately came back when turned out on a young oat stand during the late afternoon.

* * *

The young Leghorn cockerels should be sold as soon as they reach a marketable weight—generally a pound and a half to two pounds. They bring more then in proportion to their weight than if kept until grown, as broilers are in some demand while roosters are a poor sale. I used to ship to New York, but have sold locally for the past two years. I find that I can take 5c less per pound than the New York price and still be ahead of the game, as there is no loss of weight by death or shrinkage such as occurs when shipping. The dealers come right to the farm, saving the trip to the station.

* * *

Cockerels of the heavier breeds are generally sold as broilers early in the season when the price is high, and kept for roasters later when the price drops. There is always a good demand for nice roasting chickens during the fall and winter.

* * *

In case there is not enough young stock on the place to fill the houses in the fall it is a much better plan to buy ten-week pullets than to buy baby chicks at this date. The young pullets sell in the neighborhood of a dollar, and can be raised with very little loss. The great advantage of pullets over chicks at this time of year is that the pullets will start to lay in the fall when eggs are high while June chicks will not develop into layers until winter.

* * *

Pullets are better layers than hens, and should comprise at least two-thirds of the flock. My records show that my pullets have outlaid my selected hens. It is good business to sell the hens that have completed a year of laying as they go out of production during the summer, and put the money back into pullets to provide fall eggs as suggested above.—R. L. Scharring-Hausen.

Ten Herds Win Honors in Second Year of Lycoming County C. T. A.

Editor's Note.—This is one of a series of annual reports of Penn[illegible] cow testing associations. As each association completes its [illegible] year a summary of its records is published in this department. The owners of herds with a 300-pound butterfat average, whose names are at the end of the report, will be awarded prize ribbons by the Pennsylvania Dairymen's Association at the 1928 State Farm Products Show.

THE Lycoming County C. T. A. finished its second consecutive year, the thirteenth year of cow testing work in the county, on April 1, 1927, with twenty-two whole-year members; in addition, two members were in the association only part of the year.

One of the advantages of C. T. A. work, plainly noticeable this year, has been better herd management as shown by the lessening number of cows milked too long and in poor shape at freshening time, and those dried off too soon and so lowering their own record and the average of the herd. Eight of the nine herds averaging 300 pounds of butterfat or more have been in the association for two years or more.

Two Herds Break All Records

In the C. T. A. year of 1926-27 new records for milk and butterfat production in Lycoming County have been made by the association average and by two different herds. In the thirteen association years of the county the past year has been the only one in which an association average of 300 pounds of butterfat per cow has been made.

Also in the past year the first cow to give over 18,000 pounds of milk has been developed in the herd of W. H. Price, Newberry, Pa., when his purebred Holstein, Flora Ruby De Kol, produced 18,657 pounds of milk containing 577.7 pounds of butterfat. She was milked three times a day for the first three months and twice a day the rest of the year.

The herd of H. A. Snyder has been the first to average over 400 pounds of butterfat. Also in his herd a purebred Holstein, Loyalmeade Ruby Pietje Alcartra, produced 600.9 pounds of butterfat, being the first cow to give over 600 pounds of butterfat. Both of these records were made on two milkings a day.

Whole-Year Records Show Profit

The results for the whole-year members are as follows:

Average number of cows in the association	341.09
Avge. per cow: lbs. of milk	8417
Pounds of butterfat	301.7
Percentage of butterfat	3.6
Value of product	$240.03
Cost of pasture	9.99
Cost of roughage	45.80
Cost of grain	55.55
Total cost of feed	111.34
Value of product above feed cost	128.69
Returns for $1.00 expended for feed	2.16

Following is the grouping of all cows producing over 300 pounds of butterfat: Above 600 pounds butterfat, 1; between 500 and 600 pounds, 4; between 400 and 500 pounds, 29; between 300 and 400 pounds, 98. Total number of cows producing 300 pounds or over, 132.

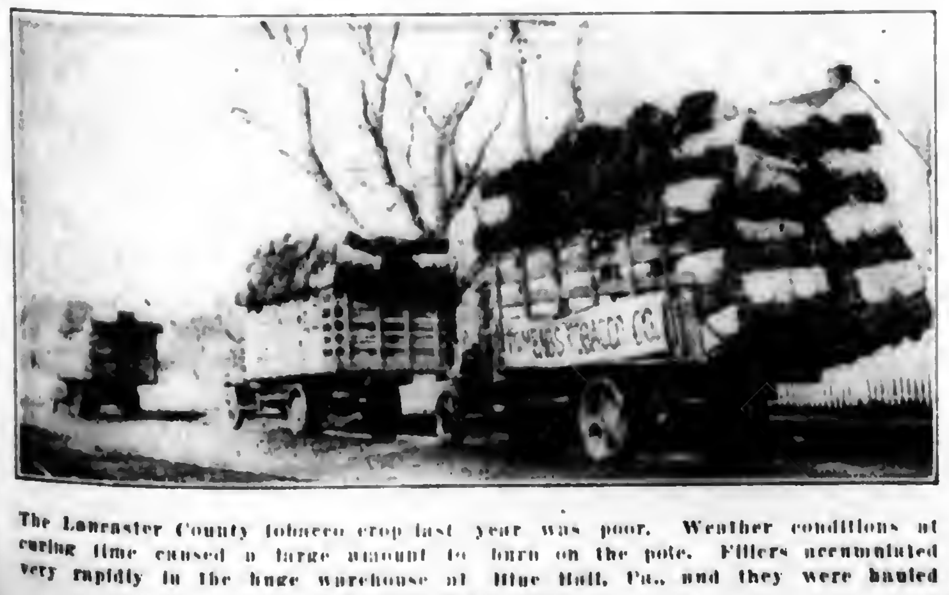
Thirty-four cows produced over 400 pounds of butterfat during the year.

Cow tester in charge, Carl Chamberlain; County Agent, W. H. Van Sant; summary compiled by I. O. Sidelmann.

Ten herds with an average of five or more cows exceeded an average production of 300 pounds of butterfat. A complete list of these herds follows:

Owner	Avge. no. cows	Breed	Pounds milk	Pounds butterfat
H. A. Snyder, Montoursville	16.42	R. & G. H.	10,845	400.6
J. A. Young, Williamsport	14.17	R. & G. H. & G. G.	10,432	382.6
W. H. Price, Williamsport	11.17	G. G. & R. & G. H.	10,269	363.0
O. A. Shirey, Linden	16.42	R. & G. H.	10,416	351.3
P. C. Antes, Williamsport	18.58	R. H.	10,637	347.3
C. L. Buss, Montgomery	9.67	R. & G. H.	9381	344.2
W. L. Barclay, Williamsport	30.33	R. & G. H. R. & G. G.	8252	319.9
S. L. Nicholson & Son, Muncy	11.75	R. & G. H.	8784	309.7
P. J. Stein, Muncy	15.58	R. & G. H.	8692	303.1
C. E. Young, Williamsport	16.67	R. & G. H.	8647	300.1

Cigars of the Future



The Lancaster County tobacco crop last year was poor. Weather conditions at curing time caused a large amount to burn on the pole. Fillers accumulated very rapidly in the huge warehouse at Blue Ball, Pa., and they were hauled away on large trucks.

NEW!
Startling Facts On Summer Feeding —just off the Press!

Mail The Coupon For Free Booklet

Years ago, summer feeding of dairy cows seemed simple as A-B-C. Plenty of pasture—why spend money for other feeds? But today there's a big change. Practical, prosperous dairymen now feed concentrates to stock on pasture.

How? This booklet tells you. Why? This booklet gives you the scientific reasons. It's packed with readable, usable information — tells you how to make more money this year by feeding Linseed Meal with a summer grain ration — to your milking herd, also to other stock. A proved success — yet a brand new story to 99 farmers out of 100. Mail the coupon for your copy.

The Portable HINMAN MILKERS

The Hinman Gas Engine Milker & The Hinman Electric Milker

Here are two machines you ought to know more about!

Complete milkers—power and all—ready to go to work for you the minute they arrive.

So light and compact, you can easily lift either machine—roll them anywhere—turn in narrow spaces. And you ought to see them do that milking job!

Power? Hardly anything. Cleaning? These are milkers you can keep clean—with ease. Dependable? *Valve chamber guaranteed for life of machine.* These are Hinman milkers—the machines that have helped dairymen earn better profits for *19 years straight!*

SEND FOR CATALOG

You want to know more about these Hinman Portables.

If you have electricity—write for catalog and information on Electric Portable.

If you haven't electricity, write for catalog and information on Gas Engine Portable. Address

HINMAN MILKING MACHINE CO.

Good to the last forkful

This Unadilla *makes* good silage and *keeps* it good. One farmer writes us, "although we did not open the Unadilla for almost a year, our silage was in perfect condition."

There is no waste—no mouldy silage—no oozing out of valuable juices, for the Unadilla doors are so made (of wood least affected by moisture) that they are air tight, frost repellant, strong and durable. They are important factors in insuring good, palatable, succulent, and productive silage.

Safe, efficient, convenient, and moderately priced, the Unadilla can solve your silo problems as it has those of thousands of other farmers.

Write today for our big catalog. It's well worth your while. Ask too, about our special discount on early cash orders.

Our water tubs, storage tanks and vats are moderately priced and sturdily built.

THE Hungry Rope

By Katherine Mayo

COPYRIGHT BY KATHERINE MAYO

CHARLES WILSON was known to the brethren as a "bad nigger," and no one in Schuylkill County remembered a day when the term had not described him. At the age of seventeen he had already piled up a lurid past. And when he then added to his record a full-grown burglary, Judge Bechtel, of the County Bench, decided to deliver a harried public from his presence for a considerable time to come.

So he gave him six years.

As Wilson was led from the courtroom, after the pronouncing of the sentence, he shook his fist in the face of the Judge, and swore that his first business, on emerging from prison, should be to kill the Judge, the Sheriff, and the town officer who had arrested him.

Whereupon His Honor summoned him back into the court and gave him three years more.

At the time when he indulged in this particular demonstration Wilson was in the employ of a farmer of Tumbling Run Valley, William Yeager by name. Later, in the seclusion of the Eastern Penitentiary, he bethought himself of Mr. Yeager as a possible avenue of escape. So he wrote several letters to his former employer asking for assistance —asking him at least to file an application for parole.

Mr. Yeager remaining unmoved, the prisoner then wrote once more, merely to say that the name of Yeager was added to the list of the doomed—that from the day when he, Wilson, should regain his freedom, by whatever means, the farmer might begin to count his life by hours and minutes.

All this history was now more than nine years old. Judge Bechtel had completely forgotten it, among the crowding events of his busy life. Mr. Yeager, in the even round of a farmer's seasons, had quite lost sight of it long ago. But Charles Wilson, "bad nigger" and time-expired man, had walked out of the gates of the Eastern Penitentiary with but one clear purpose in his incommodious brain—to get back to Schuylkill County and make his threats good.

Now, on Saturday, October 28, 1916, he was moving thither as fast as his means allowed.

At midday, as a coal-train pulled slowly thru Port Clinton Station on the Philadelphia & Reading tracks, a watchful officer of railroad police caught a glimpse of something that excited his zeal. He felt sure that he had seen a man scramble aboard on the far side, and crawl toward the top of a loaded car.

So, being an earnest officer, he ran as fast as he could, with some difficulty boarded the train himself, and after a few active moments of clutching and climbing, was about to rear his head above the slope of glittering jet on which he believed his appointed prey to lie.

HE CAUTIOUSLY reared his head, taking care to present the muzzle of his revolver close beside it, and he carefully focused his mind and his eyes for a spot about halfway down the car. Therefore, to find himself suddenly gazing, at the range of two or three feet, no more, into the eyes of a very large negro who seemed by no means scared, had almost the effect of making him cross-eyed and hysterical at one blow.

The negro, in very fact, was big. He would have stood over six feet tall, and he weighed some two hundred and thirty pounds. Even spread flat as he now was, his massive bulk was apparent and his great shoulders told a story that needed no proof.

"Mr. P'liceman," he said, with a cheerful grin, "Ah want yo' gun." And he shoved a gun of his own about five inches beyond his nose.

The railroad policeman was watchful and earnest, but he was also rather small, and it seemed to him only discreet to accede. He handed up the revolver.

"Now," said the negro, reversing the muzzle, "Mr. P'liceman, sah, you beat it!"

The policeman did the thing the phrase implied. He fell off the train, which had attained its mean velocity. He sprawled as he fell. Then he picked himself up and ran back to Port Clinton as fast as his two legs would take him. There he wired an alarm up the road.

As the coal-train rolled into Tamaqua, seventeen miles or so farther on, the contraband from his perch perceived that a welcome awaited him. Several men, whom instinct told him to avoid, hovered expectantly on the station platform. So, without waiting for closer approach, he slid over the far side of his car, dropped to earth with his negro's awkward ease, and took to the underbrush.

As he ran he hugged under his arm something dark that looked about the size of a big squash.

With a view-halloo the railroad police broke after him—hunted him on and away into the deep woods. Sometime thereafter they caught half a glimpse of him—and fired. Once and again he fired back. Twenty-five cartridges had been wasted before dusk fell and the pursuers abandoned the chase as hopeless.

But they abandoned it only for the night. They were the official protectors of the railroad, employed and paid for the performance of certain duties, of which the apprehension of stealers of rides was not the least. They could not accept a defeat so flagrant. So they telegraphed for more railway police, and with the coming of the morning started out for a general bush-beating.

But ever their man eluded them. Again and again their clutch closed over his still stirring cover, only to find him "stole away." At last the scent grew stale and cold.

And it was after that, in the second day, that they made known their trouble to "C" Troop, State Police.

Now, over in "C" Troop Barracks, near Pottsville, there was, at the moment, great dearth of men. Captain, Lieutenant, and almost all of the command were away on special duty, leaving the First Sergeant to do his best at home with a scant handful.

But First Sergeant Snyder, old veteran of the Regular Army, and a member of the Force since the Force was, is a tried and proved man. First Sergeant Snyder's best is no child's play.

IN THE start he gave his few patrols instructions concerning "an unusually large negro," which hazy phrase comprised the whole description afforded by the railroad police. For no one at this time connected the name of Charles Wilson with the hero of the coal-train. Charles Wilson had been nine years out of the mind of all Schuylkill County, and the coal-train affair seemed to the public merely an anonymous contribution to public cheer.

But as Tuesday afternoon sank into the dusk of evening, a streamer of news flew over the country, of a color that blanched the earlier tale invisible: A murder had been committed. The victim was one of those solid farmers that are Schuylkill's special pride. All jests and laughter were forgotten in the shock—all other concerns laid aside.

This time the State Police were the first to receive the alarm.

"Daniel Wagner's shot. We're just sending him to the Pottsville hospital. I think he's dying. Oh, go quick!" a woman's voice gasped over the telephone.

First Sergeant Snyder lost not a moment in acting on the report. Jumping into the Troop motor, he reached the hospital just as the wounded man had been put to bed.

"Shot thru the side," said the doctor. "A bad case. Here's where we've got him"—as he spoke he opened a door for the officer to pass. "He's very weak. Make the most of a few minutes. I can't let him be taxed beyond that." And he led the way to his patient's cot.

Daniel Wagner was a Pennsylvania German of the pure type—stout, florid, sturdy, phlegmatic, sound. He was about thirty-five years old—a married man with a wife and little children waiting for him at home. But his round face was white and sunken now, and as he lay with closed eyes it seemed as if his place in the world would scarcely know his living presence again.

WITH a heavy effort he lifted his mind thru the deeps of stupor, in an answer to the Sergeant's voice.

"Who are you?"

"Daniel—Wagner."

"Where do you live?"

Clearly, but with great labor, the wounded man made his reply.

"I'm shot. I'm dying," he added, vague terror in his eyes.

"Who shot you?"

"I don't know."

"Was he black or white?"

"Don't—know. I only saw—him —a second. I was—napping. As I —waked up — he — fired—I"—the weak voice trailed off into a whisper and ceased. The lips fell apart.

"Come away," said the doctor. "He can't stand any more."

"Queer thing," he added, as they walked off, "the poor fellow wasn't robbed. We found his bill-fold in his pocket, apparently untouched—except for the bullet. That had drilled right thru leather, bills, and all."

As the Sergeant crossed the threshold, his quiet step changed to a stride. As he jumped into the Troop car, he gave a word to the young recruit at the wheel that lent the wheels wings.

It was only about six miles from the hospital door to the farmhouse whence had come the first report—the house whence Wagner had just been brought. In that house the people waited anxiously to tell all that they knew. But, as Sergeant Snyder soon found, they knew little enough.

It was now a quarter to six o'clock. At about twenty minutes after four, they said, they had heard a great pounding of hoofs on the road outside, and had run to the window just in time to see a galloping team whirl into their yard and stop. The driver seemed to be kneeling by his seat, but before they could reach the

Gentlemen, here is a smoke!

I WANT you to meet my friend, Prince Albert. And what I mean by "friend" is *friend!* Why, there's friendliness in the way the tidy red tin smiles down upon you from the dealer's shelf. P. A.'s fragrance is just as friendly when you swing back the lid.

Fragrance that says "Come and get it!" in language you can't mistake. Eagerly you fill your pipe and apply the match or the trick lighter. That first wonderful whiff confirms this friend-stuff I've been telling you about. Here is smoking with the brakes off.

Cool as a notice to "Please remit." Sweet as the recollection that you already have a receipt. Mild as winter in the tropics. Mild, but with that full, rich tobacco body that makes every pipe-load *a smoke*. Nothing else ever tasted just like that.

If you have never met Prince Albert, you have never known pipe-joy at the very top notch. No matter how set you appear to be, I urge you to try P. A. I can't talk here the way P. A. talks in a pipe. That's the real test. Get going today with good old P. A.

P. A. is sold everywhere in tidy red tins, pound and half-pound tin humidors, and pound crystal-glass humidors with sponge-moistener top. And always with every bit of bite and parch removed by the Prince Albert process.

INTENTIONAL SECOND EXPOSURE

SHERWIN-WILLIAMS

You can't paint a house with *apple-sauce!*

WHEN the question of painting or repainting your house comes up, *don't be fooled* by a low price. Remember that *apple-sauce* is not restricted to pretty parlor speeches. There's a lot of it in "cheap" paint.

When anyone tells you, for example, that a *cheap* paint is "just as good as SWP" or any other high grade paint—that's pure *apple-sauce*—plainly exaggerated—unbelievable—too good to be true.

The reason "cheap" paint can be sold at a *low price* is because it is *low in quality*—made of cheap or skimped materials—which smell and look like paint but can't play the part on the house.

If you want proof of this, insist upon seeing the formula of the "cheap" paint, either on the label or in the literature of the company.

Then compare the materials used in making the *"cheap"* paint with the ingredients of fine old SWP House Paint. The SWP formula is always clearly printed on every can.

THERE IS 220 SQ. FEET OF PAINT LEFT IN THE *SWP* GALLON CAN WHEN THE *"CHEAP"* PAINT CAN IS EMPTY

What the formula test shows

Suppose, for example, that you are buying Outside Gloss White: Note the big percentage of *White Lead Carbonate* and *White Lead Sulphate* used in SWP Outside Gloss White House Paint. White lead should be the *basic* ingredient of all white paint and light tints. It is to these paints exactly what flour is to bread.

See how much less of this basic ingredient is used in the average "cheap" white paint.

Zinc oxide, another costly pigment, is the next essential ingredient. A liberal percentage of zinc oxide combined with a large amount of white lead makes for a *balanced formula*—such as the formula of SWP Outside Gloss White House Paint. It assures a finish of superior wearing quality.

THE FINEST HOUSE PAINT THAT MONEY CAN BUY

HOUSE PAINT

More than 90% of the pigment content of SWP Outside Gloss White is made up of these two important ingredients — white lead and zinc oxide.

In the majority of "cheap" white paints you will find only 50% or less.

It is the liberal quantity of this expensive basic material in every can of SWP Outside Gloss White that gives this fine old paint its remarkable covering capacity.

In the darker colors like browns and greens, the "*balanced formula*" of SWP is even more important.

Naturally, the dark colors can contain little, if any, opaque white pigment such as white lead or zinc oxide.

Sherwin-Williams have the pick of the world's colors. Sherwin-Williams Dry Color Works produce practically everything except the natural earth and mineral colors.

That is why SWP colors are so rich, so permanent and so true to character.

Greater durability of the paint film on your house is assured by SWP due to the use of a specially treated, pure linseed oil—made in Sherwin-Williams' own linseed oil plant.

Price per gallon doesn't tell the cost of paint

When you read or someone tells you that a "low price" paint costs you less than SWP—that's more *apple-sauce*—unbelievable.

The place to figure the cost of paint is *on the wall*—not in the can—by the job—not by the gallon. Do that and here is what happens:

Each gallon of SWP, because of its remarkable *hiding* and *covering* ability, will properly beautify and protect 360 square feet of wall (2 coats).

The average "cheap" paint, made of inferior or skimpy materials, will cover only 250 square feet per gallon (2 coats)—or less.

SWP costs more per gallon. But each gallon covers 110 square feet more (2 coats). Therefore fewer gallons are needed.

Get an estimate on SWP for your house. Then get estimates on several "cheap" paints. Compare them.

You will find that SWP House Paint costs no more for the amount you need than the cheap brands. And remember this: It costs just as much to *apply* the "cheap" paint as to apply SWP.

SWP COVERS 360 SQ. FEET PER GALLON (2 COATS)

CHEAP PAINT COVERS ONLY 250 SQ. FEET PER GALLON (2 COATS)

You get more years of service

You may hear or read alluring claims that a "cheap" paint is as durable as SWP. Plain apple-sauce — every word of it.

SWP with its fine materials, scientific grinding and mixing, dries to a firm, elastic, glossy finish. It will not chip, peel, chalk, or flake off. It weathers slowly.

Years after "cheap" paint has literally dried up and *blown away*, your SWP finish will still show a serviceable film. And when repainting *is* needed, you will save money because the finish will be in proper condition to take new paint.

That is why SWP often costs less than half as much per year.

Greater beauty, too

Finally there is a richness and beauty about SWP colors that no "cheap" paint can even approach. They give your house a rich, colorful beauty that is always a pleasure. They are weather fast—and they are non-fading.

Long after the colors of "cheap" paint have faded like an old shirt, the house finished with SWP shows practically no dimming of its original beauty.

Even after several years it can be washed with soap and water and the colors will come up unusually fresh and bright.

Trade-Mark Registered

Prepared house paint—at its best

Call at "Paint Headquarters" and save money

SWP House Paint is sold the world over by thousands of dependable SWP dealers. Each one is "Paint Headquarters" in his locality. There is one near you.

Before you let "cheap" paint blind you to real economy, get his advice on your paint problem.

He will estimate your requirements in SWP. Compare it with the cost of "cheap" paint. Then remember the greater durability of fine old SWP—the beautiful colors that do not fade. Then decide.

If you want literature, color cards, a copy of the famous SWP Household Painting Guide, help on a decorative scheme, write us.

NOTHING could be more interesting for summer porch work than these useful articles which come stamped, ready for your dainty touches of hand-embroidery. The work goes rapidly because the designs are simple and stitches easy.

Kitchen curtains No. 1642 come made up of white striped dimity, edged with green bindings. Each curtain measures one-half yard wide by one yard long, with one and one-half inch heading and one-half inch casing. Curtains are embroidered in yellow, orange, green and black.

For wear in the busy hours of the afternoon, Apron No. 1581, is charming in rose, blue or gold colored checked batiste. The design is dainty and effective worked in rose, blue, yellow, lavender, green and black.

Apron No. 1081 gives a well-dressed look. It comes stamped on unbleached muslin with pockets stamped on fast-colored blue chambray. Embroidery is in red, white, blue and black. The edges may be trimmed with blue edging or blue binding.

Mother's problem is solved for Miss One-year-old by this dainty little Dress, No. 1258, which comes made up in peach, yellow or blue voile with collar and cuffs edged with narrow Val lace. Clever flower design on front of skirt can be embroidered in less than an hour. The dress comes in one size only.

Luncheon set No. 1421 includes cloth one yard square and four 12-inch napkins. Design is stamped on linene. Clever little baskets of blue gingham at sides are really pockets to tuck the napkins in. The set is worked in shades of rose, yellow, green and black.

Runner No. 1065 is stamped on white linen with edges hemstitched. Flowers are embroidered in shades of rose, blue, yellow, lavender; leaves and stems in green.

Pillow slips No. 1775 are stamped on 42-inch wide tubing. Ends are hemstitched ready for hand-crochet edge.

Buffet set No. 1011 is interesting in shape and design. It measures 45 inches, including doilies. Edges come hemstitched.

Little sister will enjoy making this inexpensive Vanity set No. 1092 for her very own room. It comes stamped on white embroidery cloth.

Details for making embroidery stitches used on these articles are illustrated above: a. lazy daisy; b. blanket; c. twisted running; d. chain; e. French knot.

(Continued from page 12)

spot, he had disappeared—fallen back into his cart.

Then they recognized Daniel Wagner, their friend and neighbor, who in the early morning had driven by on his way to New Philadelphia, a little town some miles beyond, with a load of produce to sell. And they saw that Daniel Wagner was badly hurt.

So they lifted him down and carried him into the house, while someone took his wild-eyed, panting team in charge.

Wagner was then quite clear of mind, they said, and yet could tell them practically nothing of what had occurred. He had sold his produce, had finished his business in the market town, and was jogging peacefully home, his money in his wallet. The afternoon was soft and dark. He must have fallen asleep with the reins in his hands.

Suddenly something had happened. He could not say what, nor where. He had only one hazy impression in his mind—the fragment of a fragment—like the memory of a thing half seen in the flare of a lightning flash—an impression of some shock—some stunning impact—of a man standing in the road—no more.

Later—he did not know how much later—he had begun to realize himself—to think. Then he perceived that he had slid from his seat to the wagon bottom—that he had the reins in his hands—that the team was running away—that a farmyard gate opened just ahead. He turned his team into the gateway.

The wounded man could tell no more. His friends, seeing his growing weakness, had hurried him to the hospital. And the moment he was out of the house, one of the women of the family flew to the telephone to warn the State Police. She it was who now told the tale, trembling with excitement, twisting her hands, weeping. The men had not yet returned from town.

"Thank you," said Sergeant Snyder. "Now I'll have a look outside."

Cherry Valley

By Katherine Mayo

Copyright by Katharine Mayo

Conclusion

MEANTIME Sergeant Jacobs, watching the progress of his comrade, saw him safely turn the corner of the street. In a moment more he would be passing the Coal Company's Store. "There," thought the Sergeant, "we shall certainly get backing."

Leading the horses, and at a deliberate pace, not to excite the mob, he moved on to rejoin Gjertsen.

They passed the Company Store. It was crowded with the very people on whom officers of the State should have been able to count for stanch support. But not a man of them came forth. Instead, they hung in the windows and doors, with jeers on their faces, voicing grotesque solicitude as to the fate of "tin soldiers" in Cherry Valley—betting on the number of pieces into which they would be dissected before the hour was done.

The two officers paid no heed—kept straight on their homeward course. The manacled negro walked before them. The crowd, bunched dark and swollen like swarming bees, hung buzzing where the sergeant left it.

"I guess we're all right now," said Gjertsen.

"We'll mount in a moment," the Sergeant agreed.

But at this the prisoner, who had so far submitted, sullenly dumb, aroused himself to dispute his fate.

"I ain't goin' to walk to Burgettstown," he announced. "If you want me to go to Burgettstown, you got to take me in a rig."

"Keep right along going. We can't get any conveyance here. A four-mile walk won't hurt anybody," answered the Sergeant good-naturedly.

The fellow slouched on for a few yards, obedient, tho glowering. But he had caught his cue. His aim now was to communicate it to his timorous friends behind.

"By Moses, I ain't—goin'—on!" he bellowed, and stopped short in his tracks.

"Go on," said the Sergeant.

The prisoner obeyed once more. But he had gained time, and time was all that was needed for his policy to take effect. This also the Troopers appreciated.

Another rod or two, and then the black played his trump card. He flung himself flat on the ground. "I won't walk no fo' miles for nobody!" he howled. "I won't walk no fo' miles for nobody on earth! Yah! Yah! Yah!"

Trooper Gjertsen jerked him upright. It was not too easily done, for the fellow made himself a dead, disjointed, flaccid mass. Yet done it was, and quickly, for such a job. Meantime Sergeant Jacobs held the horses, and kept the corner of his eyes on the crowd.

The crowd was moving at last. The big, blue-black spokesman, leading it, was coming on at a dead run. By the posture of his hand, the Sergeant thought he was holding a concealed revolver. Therefore, interposing himself between Private Gjertsen with his captive and the oncoming giant, and holding the horses with his left arm as a man holds a shield, he awaited the moment. It came. He saw that the negro's hands were empty—and that he was making for the prisoner first.

"Here," shouted the new arrival, at the top of his bull-like lungs, "you don't have to go with these men! They can't take you, I say!"

From the rapidly nearing crowd rose an inarticulate howl.

Sergeant Jacobs, enveloped in calm, proceeded like a methodical nurse with an infant lunatic. Without difficulty or seeming exertion, he encircled the big negro with his grip, pinning the two flapping arms tight to the body.

He had dropped the horses. Apache, he knew, would stand alone, like the friend and the brother that he is, in the hour of need.

"Take the cuff off that other fellow's right hand, Gjertsen. Snap it on this one's left. So! There's a pair of love-birds for you! Now, you two, you are not going to start a riot. March!"

THE thing was done so quickly, so unexpectedly, that it had the effect of a stroke of fate. The big leader, the dare-devil spokesman, had been plucked like a wayside weed. In an instant it was over. Shame sat upon him. His place of glory could know him no more.

Where the leader had fallen so desperately, would the crew rush in and dare? It parleyed. It hesitated.

But the two burly blacks were not yet subdued. "We'll have our rights!" bellowed the giant, a sea-lawyer ashore. "You're obliged to give us transportation!"

"Transpo'tation! Transpo'tation!" howled the other. "We want transpo'tation!"

"You can't compel us to walk! It's against the law!"

Said Sergeant Jacobs, "You'll walk or be dragged."

Then each Trooper pulled his hitching-strap from his saddle, each fastened a strap to a negro's unmanacled wrist, and mounted.

"Start up!" ordered the Sergeant.

The blacks came to their feet with sprawling haste. Handcuffed together like Siamese twins and with their free hands lariated by a taut line, they had no choice.

"Well,—I guess we'll walk," growled one.

"Until you're done guessing and are quite sure of it, you'll walk as you are," the Sergeant replied.

They plunged on for a few yards, between the two horses.

"Please, sir, won't you kindly allow us to walk in front of the horses in the natural way, if you please, sir!" It was the big spokesman, this time, his insolence suddenly gone.

AS GJERTSEN unfastened the straps, the Sergeant looked back. The crowd so shortly before on the ragged verge of an outbreak that would have put enmity between the people and the orce in that Valley for years to come, that crowd of hostile hundreds, was melting away. No more fight was left in it. It was thinking. It was going home. It was almost won to a laugh.

"I believe the Major would like that," Sergeant Jacobs murmured, his eyes on the peaceful perspective.

"I think the Captain would say it's a right start," Gjertsen elaborated. "But there were moments—"

"There were," the Sergeant concurred.

The march ended at the Squire's office door.

"Now, what about the other man?" asked the Justice, having disposed of the first arrest.

"In his case," responded the Sergeant, "we ask for a considerable penalty. These are our first arrests in Washington County, and we intend to be fair, square, and not too severe. But this man tried his best to cause a riot in resistance to the execution of the Law. We do not intend to encourage such enterprise."

"I'll give him four months," said the Squire.

Later, the prisoner begged that he might speak to Sergeant Jacobs alone.

"Cap'n," said he, "Squire's given me four months. But before I go away, I want to explain to you that I didn't know you was a State Police officer. Didn't know what a State Police officer is. I came up from Virginny, I did. I thought you was just like all the militia down there—just tin soldiers that nobody don't mind. An', Captain, I want to ask your pardon before I go away, because when I get out, Cherry Valley ain't no place for me unless you know I'm your man."

"Marse Sergeant Jacobs' man, indeed!" snorted old Uncle White-Wool when he heard the tale. He had already attached himself, body, soul, and lonely heart, to his new hero, and had endowed him with all the attributes of long ago. "Marse Sergeant Jacobs don't have no use fo' dat common new trash! I'se de onlies' nigger he tolerate 'bout his pusson. My name is Jacobs, sah, if you please. I'se changed it to suit the occasion."

Such was the introduction of the State Police to Washington County; and the sub-station details, one after another over a long period, followed a good start. But at last came a day when the "economy" of the State Legislature so operated that Burgettstown sub-station must be withdrawn for lack of funds to sustain its Spartan cost; and then was afforded a gauge of the real feeling of the farmers toward the Force. That thinly populated region sent in a petition signed by nearly four thousand persons, urgently protesting against the withdrawal of the devoted friends and protectors, without whose presence they scarcely now knew how to live.

Catching Up with Your Questions

LETTERS come piling in one upon the other so fast it just seems that I never would get caught up answering your questions. For the benefit of Ruth Vogle, Sullivan County; John Ruth, Montgomery County; Marqueen Bower, Columbia County, and Lucelle Fisher, Clarion County, who wrote last week asking about membership in the Forum, let me say that membership pins are sent to those boys and girls who contribute letters, photographs or drawings which I think deserve special recognition.

Cousin Ruth

We're glad to hear from anyone, however young or however old, but most of the cousins who enjoy our page are from eight to fifteen years of age. Letters come in, of course, from little folks of six and seven but they're just beginning to learn to write letters so I don't hear from a great many of them.

Please remember that the puzzle corner is for the little folks particularly and that it is not a part of the Forum. Some of you still seem to think you deserve a membership pin when you send in a puzzle answer. All wrong. You are Forum cousins when you write the Forum and Forum members with an (X) after your name when you have been awarded the membership pin.

A whole lot of you have been asking to see my picture. Here it is. It may look like me or it may not by the time it reaches you. Two years ago when I printed what was supposed to be my likeness here on the page the printer's ink rollicked all over my face and even I could scarcely recognize myself! Here's hoping the ink will stay where it belongs this time.

You're right, Anna Grinnell, my birthday is February seventh. As for my age, (oh, yes, someone asked me that the other day) well just take a look at this picture. If it's clear you'll know I'm past sixteen and if it's blurred I assure you I am. But I am not very ancient. I hope to do heaps of things before I reach fifty!

There, a few questions have been answered. As soon as a stray moment floats my way some of the rest of you will hear from me, too.

Be on the lookout next week for another contest. I think it'll be one of the kind you all like especially well.

COUSIN RUTH.

From Forum Members and Friends

Dear Cousin Ruth and Forum Friends:—This is my first letter to the Forum page and I am sending in two poems that I wrote.

Come join this dear old page, friends,
Come join it, everyone,
And I know you will enjoy it
For it is a lot of fun.

Send in pictures and letters,
And paintings of every kind.

The robin is building
Her nest in the tree,
While she sings her song
So merrily.

The daffodil is also here;
And that's the sign of spring,
And all the other little birds
Are helping the robin to sing.

The coldest days are over,
The warmer days have come;
And the farmer is getting ready
For his work has just begun.

—Edna Erney, (X), Lehigh County, Pa.

Third Prize—Group Two—12 and Under
"Around My Home"
Marion M. Snyder (X),
Susquehanna County, Pa.

I think it's very pleasant,
And I know you wouldn't mind.

Tell your friends and others,
Tell them great and small
For Pennsylvania Farmer
Can't be beat at all.

SPRING

Listen, folks, listen,
And I'll tell you something nice,
The sun was shining very hot
And it melted the snow and ice.

Spring is here once more,
Winter's gone and past,
The dandelion in the field
Is growing very fast.

Dear Cousin Ruth and Forum Members: I have received the membership pin and thank you very much for it. Our farm is along a concrete road which was built two years ago. I like to work on the farm. I have been helping to plow ever since I was eight years old.

This spring I made a bird house and put it on a post near our house. A little wren built a nest in it. We have a pet cat and we call him "Nigger" because he is all black. He is one day older than my sister Florence who is over nine years old. We have a cat we call "Blule" because she is all blue. She has three little blue kittens.—Raymond Bricker, (X), Franklin County, Pa.

Honorable Mention—"Around My Home"
Verda Hamilton, (X), Clarion County, Pa.

Dear Cousin Ruth and Forum Friends:—I was born and raised on a farm until I was eight years old and then dad made sale and we built a new bungalow near the farm buildings.

For pets I have two dogs, Trix and Towser. They match in color. They help get us a nice lot of rabbits in the fall. We keep them tied most of the time in our chicken-yard. I had one cat. I called her Ginger. She was a black and yellow mixture. One day this spring as I was coming up the state highway with my cat walking by my side a car came down the road and killed my cat right before my eyes. Boys and girls, you cannot imagine my sorrow.—Pauline La Rue Wible, (X), Fulton County, Pa.

Dear Cousin Ruth and Forum Friends:—It has been a long time since I have written to you, but I haven't forgotten you. It has been very cool here but the vegetables and flowers are growing nicely. The trees are full of blossoms and I think we will have plenty of fruit and the strawberries are full of blossoms, too.

This spring I planted lady slippers, a very pretty flower when in a flower bed. Cousin Ruth, I wish you could see our geraniums. We just planted them in a flower bed and I got candytuft and nasturtiums and planted them all around the bed. I like to make candy and please, somebody send me a recipe for some molasses candy.—Ethyl M. Gicker, ten (X), Berks County, Pa.

Dear Cousin Ruth:—I thought I would make a sketch of my father plowing. I am taking art lessons in school but can't draw very well.

I drew the harness according to the way we harness our two horses but the man doesn't look like my father at all.—Rose Sefelk, (X), Washington County, Pa.

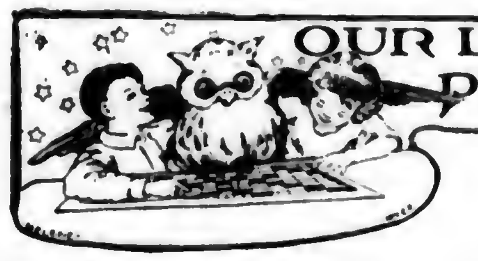
OUR LITTLE FOLKS' PUZZLE CORNER



DEAR LITTLE FOLKS:—Every once in a while it is a good idea to look over and count up things in order to know just where we stand. Many of us have collections of some kind, perhaps it is postage stamps, snapshots, marbles, or something else that interests us. Sometimes we are greatly surprised when we see our collection spread out; we didn't realize we had such a lot of things. Just look over the collection of "fours" we have today. It may seem a strange thing that three fours can be made to equal five fours, but you can do it if you will put the correct signs between the figures. You may use just one multiplication sign, and the rest will be plus signs. When you have found out how to place these signs in this collection of "fours" let me have your answer on a postcard or in a letter so that it reaches me by June 25th. BE SURE TO SAY HOW OLD YOU ARE, IN WHAT COUNTY YOU LIVE AND WHEN YOUR BIRTHDAY COMES. The ten children, sending in the correct answer, whose cards or letters are the best in grammar, spelling, punctuation, penmanship and general appearance, will each be awarded a prize. Address all puzzle answers to The Puzzle Editor, Pennsylvania Farmer, 261 South Third Street, Philadelphia, Pa.

The answer to the mixed sentence puzzle in the May 28 issue of Pennsylvania Farmer is: 1. Columbus discovered America. 2. Most children like to play ball. 3. A peach is a fruit with a fuzzy skin. 4. The fragrance of lilacs is sweet.

The prize winners are: Gladys Bennett, age 12, Holmdel, N. J.; Alice Brown, age 11, Christiana, Pa.; Alice Goodyear, age 13, Lebanon, Pa.; Emily Hansen, age 10, Freehold, N. J.; Jean E. Morrison, age 13, Washington, Pa.; Vera Elizabeth Newman, age 10, Chestertown, Md.; Mary Ellen Palmer, age 12, Greencastle, Pa.; Ellwood Parry, age 12, Coopersberg, Pa.; Norma Patterson, age 12, New Castle, Pa.; Vera F. Sandoe, age 11, East Earl, Pa.

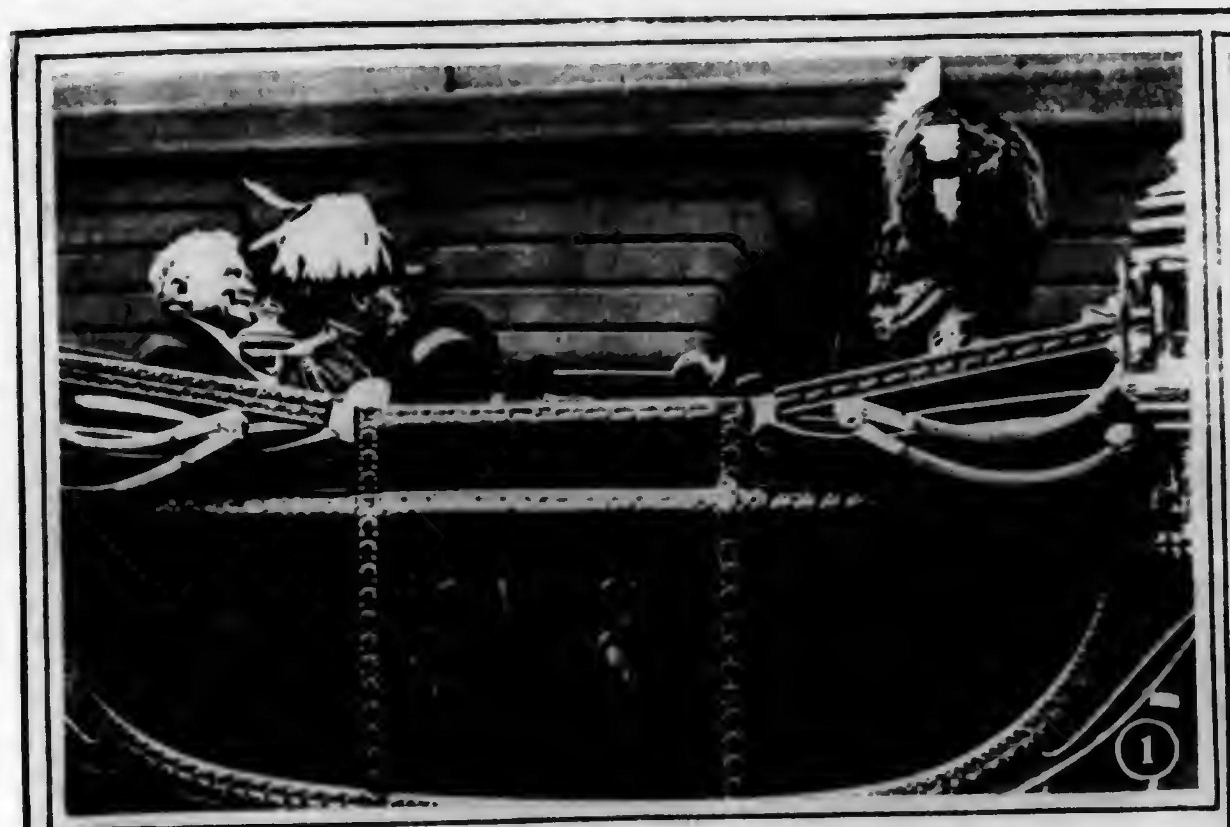
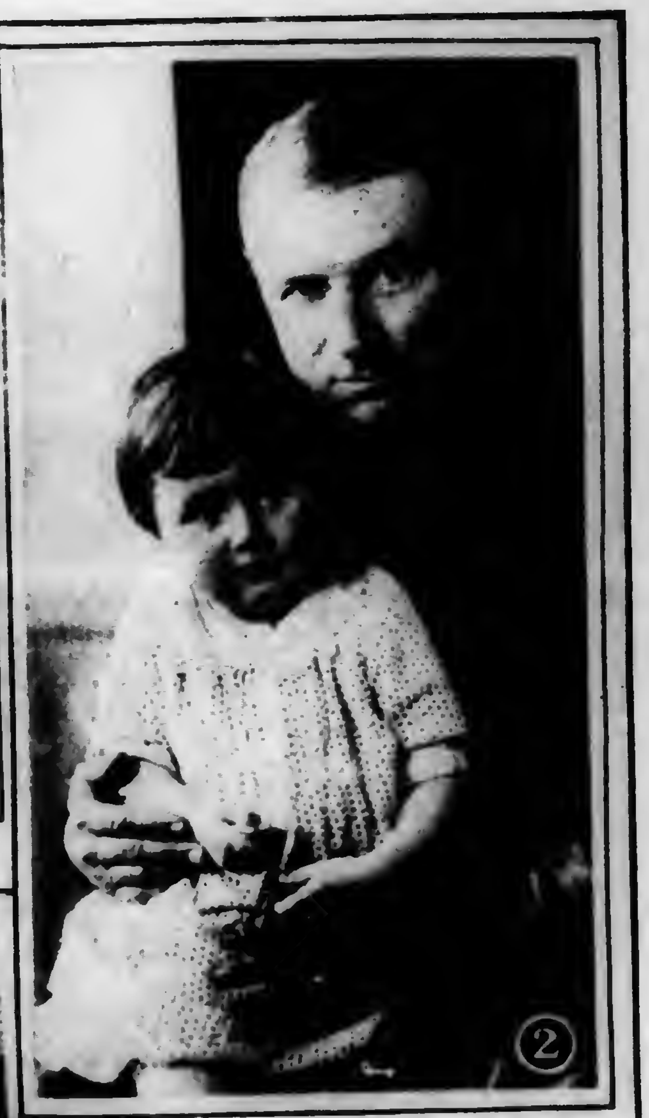
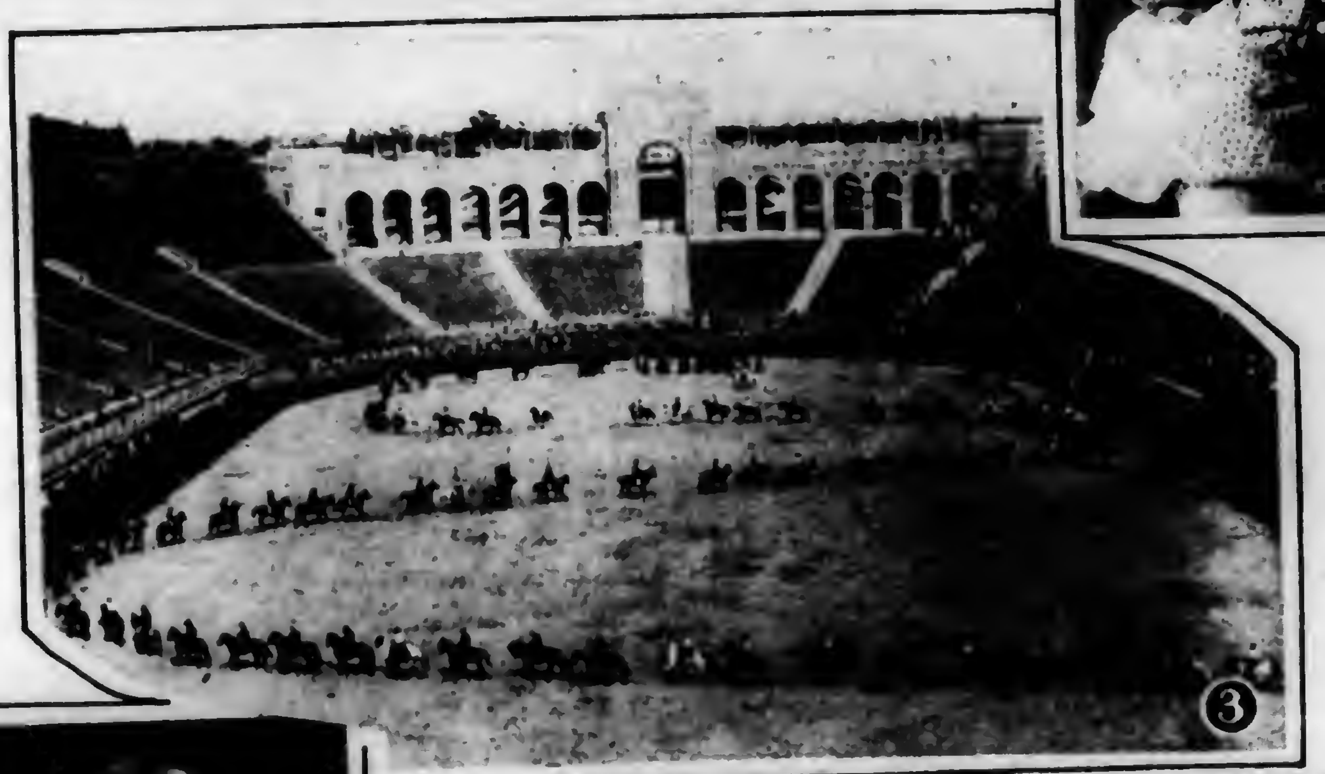
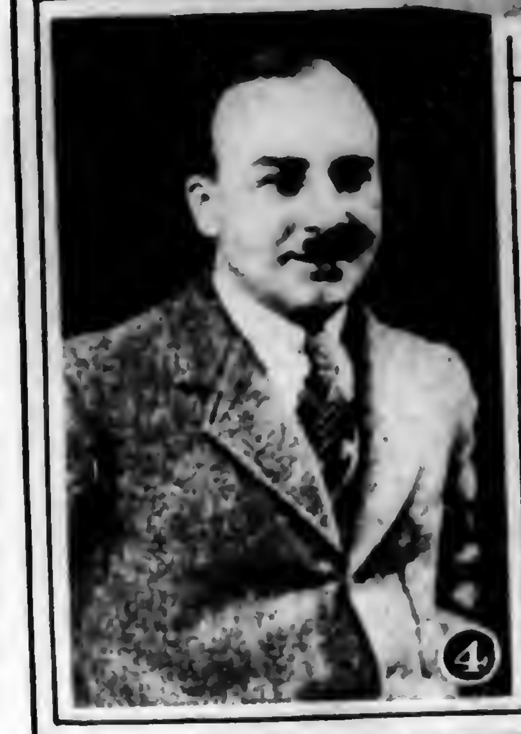
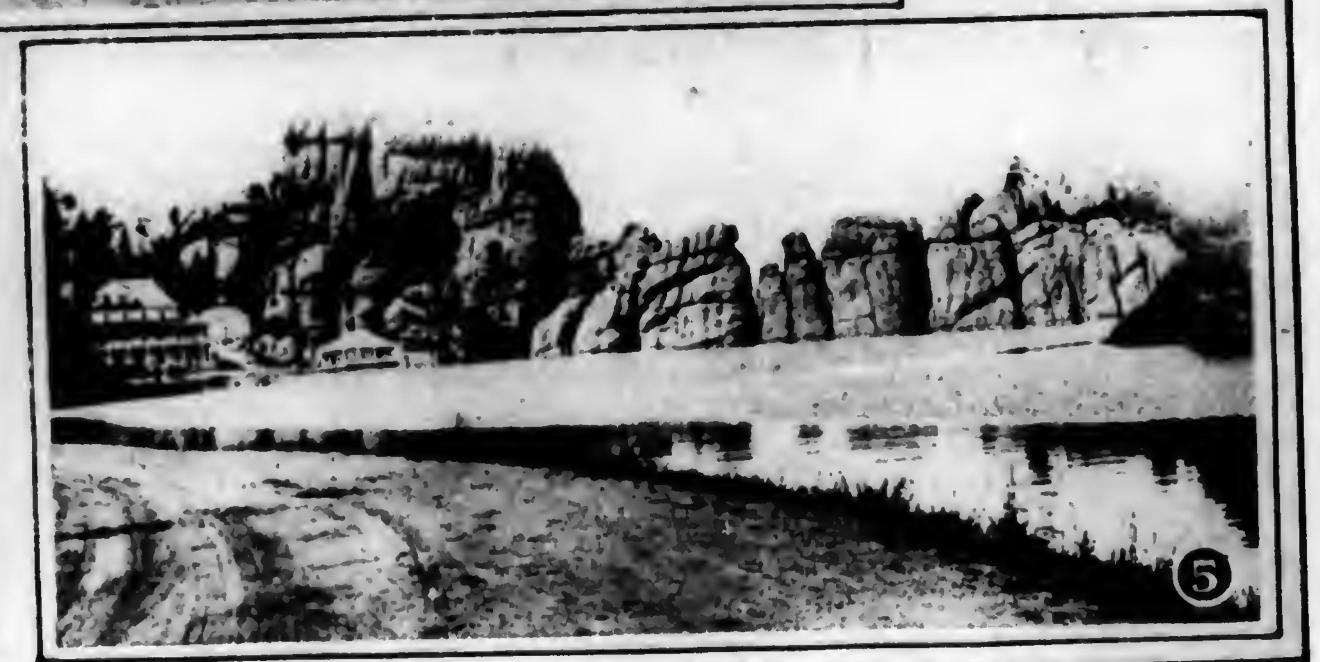
PASSING EVENTS IN PICTURES











1.—When M. Gaston Doumergue, President of the French Republic, and Premier Briand visited England recently, they were welcomed with great pomp and ceremony. King George, the Prince of Wales, Prince Henry and President Doumergue driving to Buckingham Palace.

2.—General Billy Mitchell, former Assistant Chief of the Air Service, and his daughter, Lucy Trumbull Mitchell. The general is leading a quiet life at the Mitchell estate at Middleburg, Virginia.

3.—Broncho busters, steer ropers and riders from every part of the West took part in a big rodeo in the Los Angeles Coliseum late in May.

4.—Sir Alan Cobham, who is called the "Lindbergh of England." He has flown from London to Melbourne, Australia, and back, and from London across darkest Africa to Cape Town and back again. He used the same single-motored plane and the same engine for both trips.

5.—Sylvan Lake, ten miles from the Black Hills Lodge in South Dakota, which the President and Mrs. Coolidge have chosen for the Summer White House.

Why Dread the Kitchen?

Paint, Screens and an Oil Range Make It Light, Airy and Cool in Summer

IS YOUR kitchen all dressed up for summer? Only a few real farm women can have "made-to-order" kitchens; most of their workshops go thru a process of revolution year by year.

The kitchen is the one room of the house where we spend the most of our time and it should be well equipped for summer comfort. The first two requisites are plenty of light and a circulation of air. Of course, the summer light should be adjustable. That means good shades at the windows. We want to lower the shades on a hot summer afternoon, so that when we go to the kitchen to get supper it will be as cool as the living room.

There must be a circulation of air. I have wire screening the whole length of the west window, and the east door is directly opposite. The roof is shaded by old, old locust trees, so that my kitchen is the coolest room of the house all summer.

The day is past when the farm woman needs to roast, along with the foods she prepares for the family. A good oil range is a wise investment and a necessary one. It surely is torture to stand over a hot wood range all summer, cooking for a farm family, and no woman in justice to herself should do it.

A Room of Their Own

This farm kitchen must be planned so that it can be kept spotlessly clean with a minimum of effort. It is not the proper place for old work shoes, coats, etc., and if possible some other place should be found for them. The barn clothes are not odorless and more or less dirt is carried into the kitchen on the clothes. Most of us have to work out our own salvation along this line in our own way. I turned the pantry into a room solely for work clothes.

We built plenty of cupboards in the kitchen, made a built-in shelf with the door opening from the dining-room and made a built-in wood box, opening on the inside like a flour bin.

All this has been done a little at a time. Tonight I am weary in flesh but contented in spirit. This week I have put fresh varnish on all the kitchen woodwork—and it is mostly woodwork. It required a half day to get over it with one coat, and I am not an especially slow worker. First, I put on two coats of flat yellow (there were various kinds of woodwork in the kitchen) and then covered that with two coats of clear varnish. I believe this will give an easier surface to wash than paint, will not show the soil, and will wear well. And it is light! Anything but a drab, dark paint in the kitchen!

Now I am waiting for the paperhanger to put on a light blue check paper to match the linoleum.

So my kitchen is all dressed up for summer, all ready to free her mistress as much as possible from drudgery during hot weather.—May H. Mumaw, Ohio.

As inviting on a hot summer day as any other room in the house.

Separate Boxes Solve the Problem

PICNICS and all out-of-door eating become increasingly popular. I find picnic meals easier than home meals if one studies to save work and fuss.

Here is one way we like. In a small light suitcase we keep an outfit of dishes—cutlery, enameled and paper plates and cups, paper napkins and an old linen cloth. When lunch is prepared, each article of food is placed in a separate box or container—a box of sandwiches, one of cake, one of fruit, another holding cheese, relishes, etc. A small covered enamel pail for salad, pudding and the like. In the cover of the suitcase is strapped a nest of light tin trays.

Arrived at the picnic place, these boxes and cases are opened and are ready for serving. Each person selects a tray, dishes and such food as he wishes. No heavy basket to carry. No tiresome unpacking and repacking for mother. Everyone helps a little and no one minds the work.—Alice Margaret Ashton.

Profits by Fairs

ONE summer I made enough money from my fancy work to buy a floor lamp and a silk dress, and still had the fancy work left to sell or to keep, or to give for Christmas. I sent it to five neighboring fairs. If I could not go myself I wrote a letter to the superintendent of the fancy work department, and the fancy work was sent in a box parcel post insured, together with entry numbers copied from the premium list.

The University of Illinois, Urbana, Ill., has a good booklet on fair exhibits, or you can write to Iowa State College, Ames, Iowa, for the free booklet on exhibiting. These give score cards for fancy work, baked goods, canned goods, butter, cheese, honey and soap. The judge is willing to give criticism and suggestions.

Fancy work is made especially for the fair, with competition in mind, finishing all seams perfectly on the wrong side, and striving to show originality and beauty of design.

A neighbor earned $150 the summer that she was twenty. Her father has an orchard, and she helped him plant a garden that yielded the finest and most perfect specimens for exhibit at the fair.

Some of the best fruits raised were cold packed, and she bought still other fruits to can. She used commercial pectin with the juices that do not "jell" and showed twenty-two kinds of jelly. These same glasses journeyed to six different fairs.

She killed a non-producing hen and took a prize on the best can of fried chicken. For a balanced meal, she had a can of roast beef, sweet potatoes, peas, cucumber pickles, carrots and plums. A colored poster showed the serving of this dinner.

There is seldom an entry fee so that it costs nothing but the time and trouble to enter your fancy work and canned goods.—D. W. McC.

Pageants or Parades Are Better Than Burnt Fingers

LAST year a neighboring village planned the very nicest Fourth of July celebration I have ever seen. In the morning there was a splendid parade showing the progress of our country from early days to the present time followed by a pageant displaying conditions of today to George Washington and his friends. Miss Columbia supervised this fine historical feature. It was an ideal way to commemorate Independence Day. There were many tributes to the flag, fine music was furnished and all fireworks were prohibited. This prohibition was strictly enforced, too.

You may have guessed there was a picnic dinner which enlivened community fellowship and then the time was spent enjoying races and a good ball game. Surely this sort of celebration is far superior to the din and waste of firecrackers and worse noises. And think of the sorrow and distress that always follow in the trail of Roman candles and rockets shot off in the crowds. That sort of celebration harks back to the days of barbarism and has no place in the modern civilization of the present century. Which plan are you using in your community this year?—Mrs. E. M. Andersen, N. Y.

Tommy Needed a Friend

MRS. DUNN, a young married woman in her 'twenties sat sewing on her piazza one hot day in June waiting for her six-year-old son to come home from school.

Coming down the street was a sturdy little figure hurrying along.

"'Lo Ma," said Tommy Dunn soberly to his mother.

"Hello, Sonny," was the smiling response. "Did you have a good day?" To her surprise her small son passed quickly into the house.

She was about to follow when two boys, a little older than Tommy, passed by the gate and looked impudently at Mrs. Dunn.

"Guess he won't tie a can to Mrs. Greene's Pomeranian again," said one in a loud voice.

So that was it! That was the reason Tommy had gone into the house so quickly.

She hurried into the house and found Tommy lying face downward on the bed.

"Tommy," she began severely, "haven't I told you time and time again to keep away from those Putnam boys? Answer me!"

"Yes, Mother," muttered Tommy.

"Did you tie a can to Mrs. Greene's Pomeranian?"

Tommy dug his face into the bedclothes and said nothing.

"May I come in, Mrs. Dunn?" a voice called from the other side of the screen door.

"Oh, Miss Brent, I am glad to see you," and Mrs. Dunn hastened to open the door to Tommy's teacher who must pass their gate on her way to and from school. "I've just been scolding Tommy for being with the Putnam boys."

"Let's talk on the piazza," said Miss Brent quietly, and both women left the room.

Miss Brent began the conversation.

"The Putnam boys caught Mrs. Greene's Pomeranian and asked Tommy to hold it, for some reason or other, and when he was doing so, they tied the can to the dog's tail and then shoved him out of Tommy's arms. The dog ran away."

"Why didn't Tommy tell me?" asked the exasperated mother.

Miss Brent continued.

"I have seen Tommy try to avoid those boys without getting into trouble, but they contrive to get him mixed up in all their mischief. They swear him to secrecy, and, Mrs. Dunn, those same boys have discovered that you believe them when they tell you what they wish about Tommy. Can you understand the position in which they place Tommy?"

Miss Brent was hardly prepared for the move Tommy's mother made, but she sat there quietly as Mrs. Dunn hastened out of the yard and down the road to the Putnam's where she told the whole story to the Putnam boys' mother who told her she didn't believe a word of it.

That was that! The mother who had the whole neighborhood complaining about her boys, defended them unheard, while the mother of one of the finest boys had wavered in her faith and understanding. Had her son sensed that?

Miss Brent didn't mind it a bit when Mrs. Dunn passed her on her way into the house as tho she never existed, but she heard her:

"Tommy, Sonny, always tell Mother everything. No matter what is said or done to you—tell Mother so she'll understand. Mother is your best friend, ever and always. I must thank Miss Brent! . . ."

But Miss Brent [illegible]

The Kitchen Cabinet

FOR breakfast or luncheon there is no nicer way to serve strawberries than merely washing them thoroly without stemming. Then after draining well, arrange on individual plates surrounding a mound of powdered sugar. Eat with the fingers, dipping them one at a time into the sugar.

• • •

STRAWBERRY PIE

Fill a baked pie crust with fresh, select hulled berries and cover with the following syrup.

Add ½ cup sugar and ½ cup strawberries to two cups boiling water. Let boil up again, then strain. Add 1 tablespoon cornstarch blended with a little cold water. Cook over a hot fire for several minutes, stirring constantly. Remove from the fire and beat hard. Place on slow heat and cook slowly till thick. Pour while hot over the strawberries in the baked shell. Serve hot or cold.

• • •

STRAWBERRY MOUSSE

1 quart berries
1 cup sugar
1⅓ tablespoons granulated gelatin
2 tablespoons cold water
2 tablespoons boiling water
¾ cup sweet cream

Wash and hull the berries, sprinkle with the sugar and let stand one hour. Then press thru a sieve. Add the gelatin which has been soaked in cold water and then dissolved in the boiling water. Set the mixture in a pan of ice and stir until it begins to thicken. Fold in the cream whipped. Pour into mold, cover, pack in salt and ice, using 1 part salt and 3 parts ice. Let stand for four hours.

• • •

CANNED STRAWBERRIES

Use freshly picked berries. Pick over carefully, wash and stem the fruit. Into your largest agate preserving kettle, measure one pound sugar for each pound of berries. Boil just eight minutes, counting from the time boiling point is reached. Remove from the fire and let stand in the kettle all night. Next morning pour into jars that have been sterilized and cooled. Seal at once. Berries preserved in this way have good color and are most delicious eaten as sauce or served over ice cream. Last year mine were perfect altho they had to stand 20 hours and I wished I had many more.

• • •

CARROTS WITH GREEN PEAS

Cook together until tender young carrots cut in slices and an equal measure of green peas. Thicken the remaining liquid, using 1 teaspoon flour rubbed smooth with sweet cream for each cup of liquid. Add to the boiling vegetables when just ready to serve.—Mrs. E. M. A.

Vines Afford a Quiet Retreat in a Busy World

> "They shall sit every man under his vine and under his fig tree; and none shall make them afraid; for the mouth of the Lord of hosts hath spoken it."—Micah.

FROM earliest times, the vine has held its place in the heart of men as the symbol of the peaceful home. What it means to sit and rest under one's own vine is being realized. More and more seek out peaceful retreats, away from the noise of the modern world, where they may enjoy nature and think on the inner things of life.

There is a suitable vine for every place, and, doubtless, each home flower gardener will select the one best adapted to the need. The grape, with its artistic foliage and luscious clusters, often is connected in mind

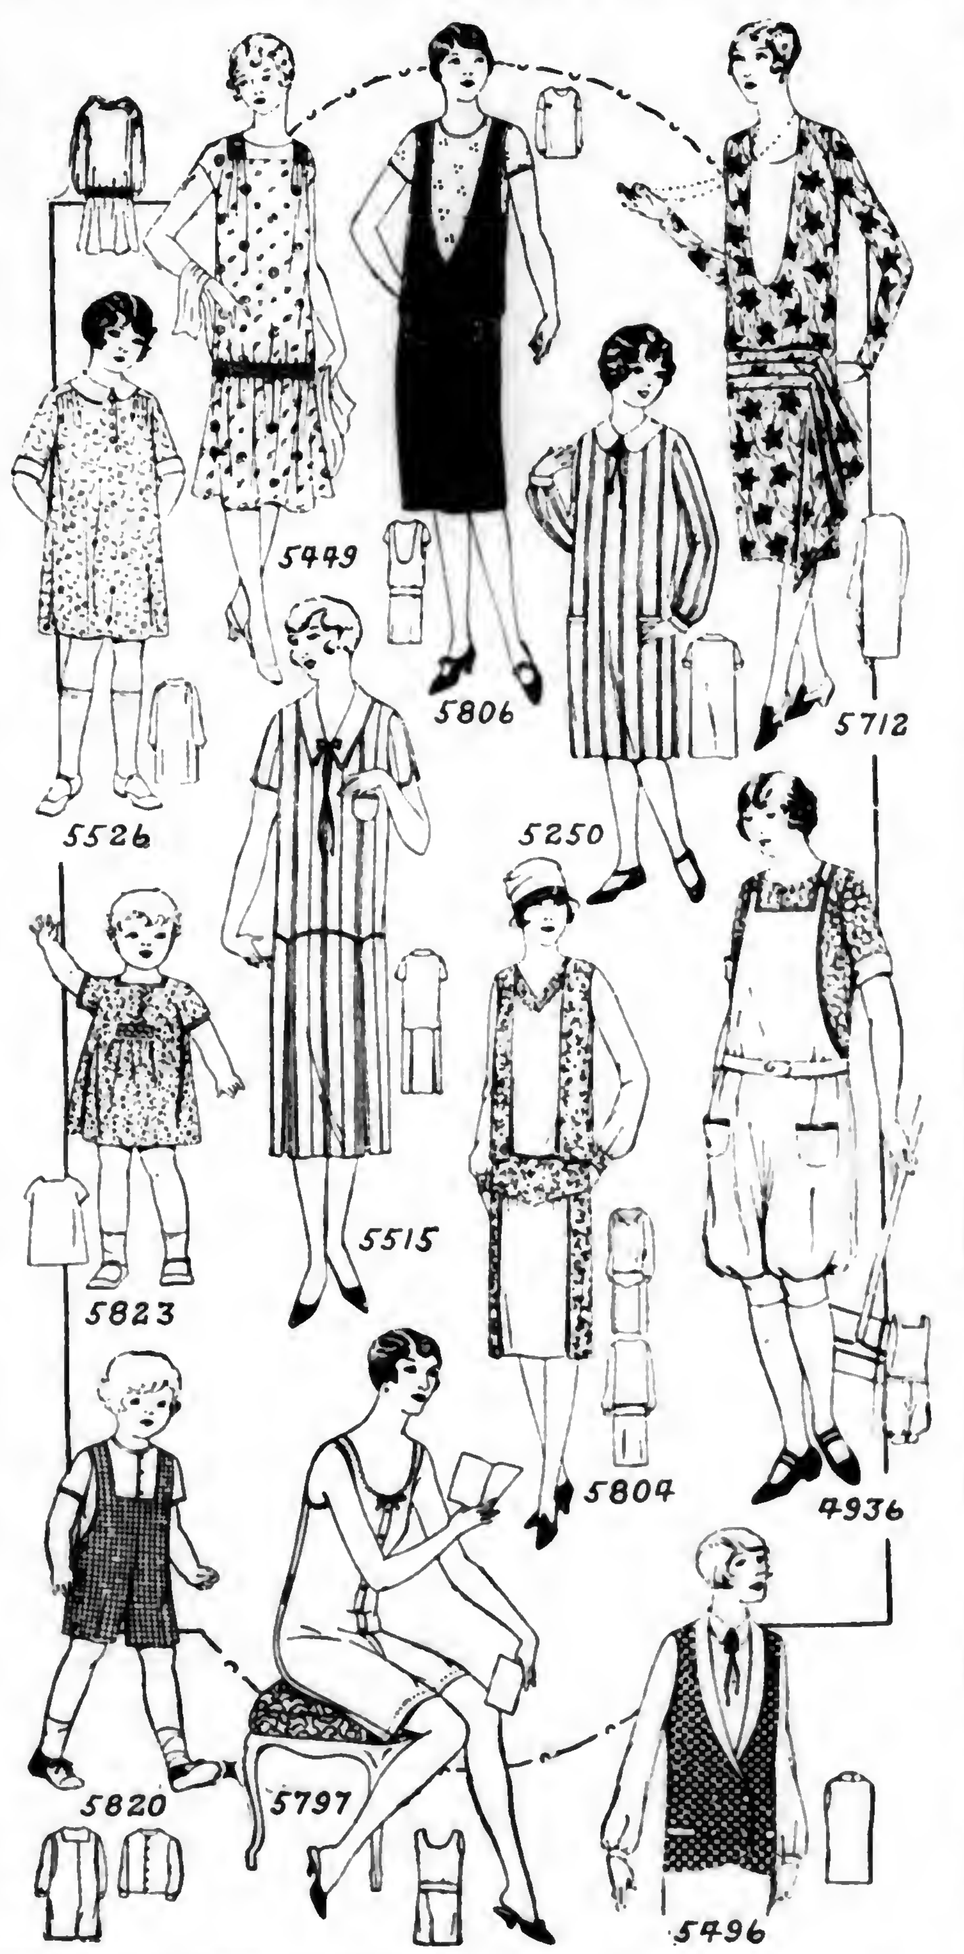
TELL the advertiser you saw adv. in Pennsylvania Farmer.

Fashion Decrees Chic Styles



Directions for Ordering.—Give figure or figures of each pattern exactly as printed at beginning of each description. Give bust measure when ordering waist patterns, waist measure for skirt, and age for children's patterns. Address Pennsylvania Farmer, 261 S. Third Street, Philadelphia, Pa.

5526.—Four sizes, 4, 6, 8 and 10 years. A 6-year size requires 1⅝ yard of 36-inch material with ¼ yard of contrasting material. If made with long sleeves and of one material 2 yards will be required. Price 10c.

5449.—Four sizes: 14, 16, 18 and 20 years. A 16-year size, if made as shown in the large view, will require 3 yards of 40-inch material and one-sixth of a yard of contrasting material ⅓ yard wide for facing on the yoke insert. If made of one material entirely and with peasant sleeves, it will require 3⅞ yards of 40-inch material. Price 10c.

5806.—Three sizes: 16, 18 and 20 years. An 18-year size requires 1⅞ yard of 32-inch material for the guimpe if made with long sleeves and 2⅛ yards of 40-inch material for the dress. If the guimpe is made with short sleeves ⅜ yard less of the material is required. Price 10c.

5250.—Four sizes: 6, 8, 10 and 12 years. A 10-year size requires 2⅝ yards of 32-inch material with ¼ yard of contrasting for collar, cuffs and pocket facings if made with long sleeves. With short sleeves 2⅜ yards will be required. Price 10c.

5712.—Six sizes: 34, 36, 38, 40, 42 and 44 inches bust measure. A 38-inch size requires 4 yards of 40-inch material with ¼ yard of contrasting material. Price 10c.

5823.—Three sizes: 6 months, 1 and 2 years. A 1-year size requires 1¼ yard of 27-inch material. Price 10c.

5515.—Six sizes: 34, 36, 38, 40, 42 and 44 inches bust measure. A 38-inch size requires 4⅝ yards of 36-inch material with ¼ yard of contrasting material. Price 10c.

5804.—Three sizes: 16, 18 and 20 years. An 18-year size requires 1⅞ yard of plain material 40 inches wide together with 1⅝ yard of figured material. If bolero is omitted, and the dress is made without contrasting material, it will require 2⅜ yards of 40-inch material. Price 10c.

4936.—Four sizes: small, 34-36; medium, 38-40; large, 42-44; extra large, 46-48 inches bust measure. A medium size requires 3⅛ yards of 36-inch material. Price 10c.

5820.—Four sizes: 2, 3, 4 and 5 years. A 4-year size requires ⅞ yard of 36-inch material for the blouse with long sleeves and ⅝ yard with short sleeves. For the overalls 1⅜ yard will be required. Price 10c.

5797.—Four sizes: small, 34-36; medium, 38-40; large, 42-44; extra large, 46-48 inches bust measure. A medium size requires 2½ yards of 36-inch material. The belt portion of elastic webbing will require ⅝ yard 2½ inches wide. Price 10c.

5496.—Six sizes: 34, 36, 38, 40, 42 and 44 inches bust measure. A 38-inch size requires 1⅝ yard of 40-inch material together with ⅝ yard of contrasting material for collar and pocket facings. Price 10c.

Send 10c in silver or stamps for our up-to-date spring and summer 1927 Book of Fashions.

Vines Afford a Quiet Retreat in a Busy World

(Continued from page 21)

with a cool, shady back door and brickwalk. Climbing roses may spread over the whole end of a house and frame dining room windows, or creep to the topmost branch of the tree in the back yard.

Or, a giant old wisteria may almost have hid a roomy porch, where sway the purple racemes, with their haunting fragrance. The hardy clematis makes for beauty, with its many blooming periods from July to November and its wide range of colors. The honeysuckle, too, is found in most gardens. The Maderia vine, twiner and quick grower, has the charm of scent, making up for its rather small bloom. The Dutchman's pipe, with its large, broad leaves, long has been popular for screens and arbors.

The Kudzu vine is another broad-leaved variety, good for screening, vigorous and soon attaining great length. The popular Virginia creeper and the Boston ivy, sometimes known as Japanese ivy, are different forms of the Ampelopsia. Once started they grow quickly and soon will completely cover a stone or brick wall with a thatch of green in summer, turning later to a glorious red.

English Ivy Clings to the North

The evergreen bittersweet, often called wintercreeper, is the one reliable evergreen vine and will continue to increase in favor as it becomes better known. It can be used to run up tall trees, cover walls or carpet the ground—and it has the virtue of being cheap as well as beautiful. The English ivy does not live up to its best in this country on account of our climate, but will do best on the north side of a building.

Other good evergreen ground-coverers are the myrtle, or periwinkle, with its dainty, lavender-blue blossoms all summer, the partridge berry with its pretty pink flowers, followed by scarlet berries which last all winter, and the Japanese spurge (Pachysandra), which spreads slowly, but makes a close, green mat. These all thrive in the shade.

Annual vines often are most useful on account of their rapid growth and quick results. Everyone knows the lovely morning glory, fresh with the dew every day, and its evening blooming relation, the moonflower. The cardinal climber is a wonderful red of the same family, the "Heavenly blue," a newer member of this family; the Brazilian morning glory, a charming rose hue, while the Imperial Japanese is of remarkable size and unusual shade.

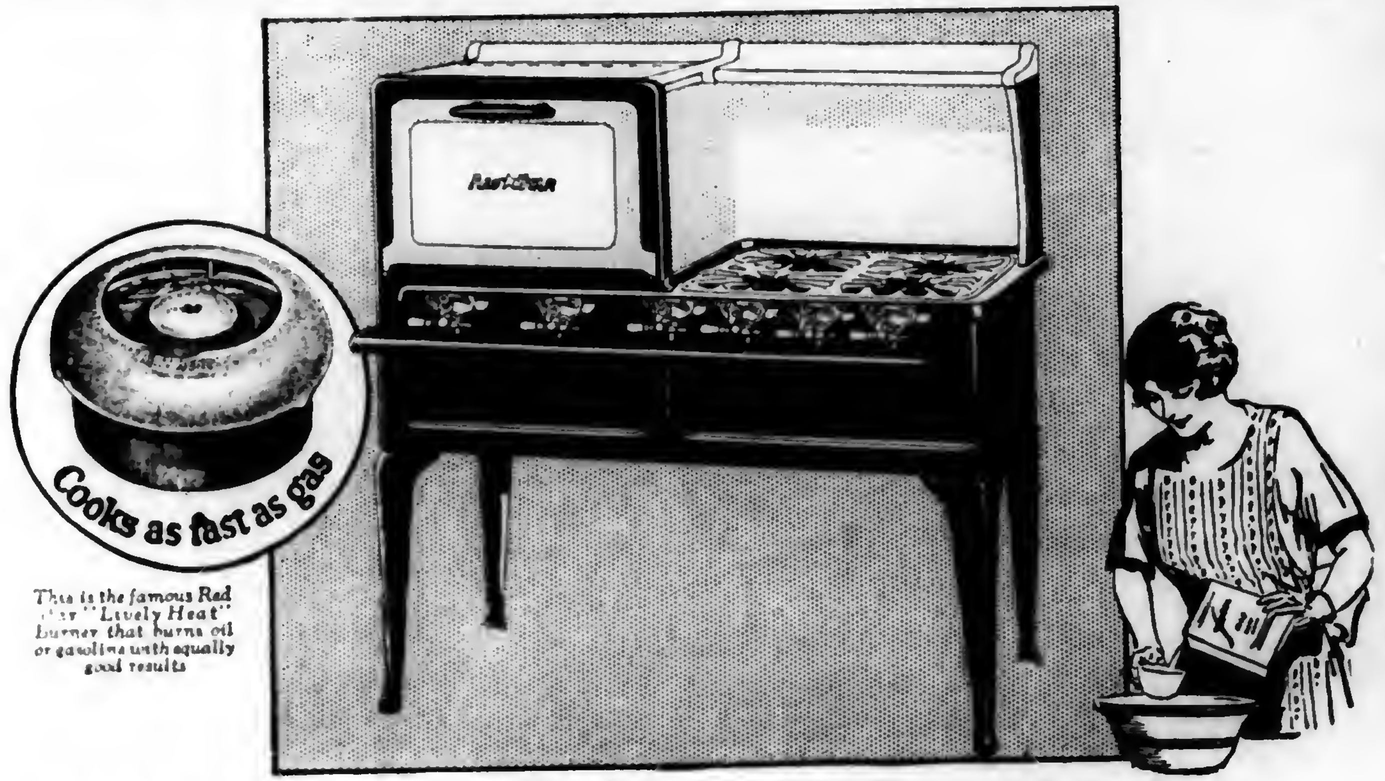
The Scarlet Bean Climbs Fences

The scarlet runner bean makes a fine vine for draping clothes poles and back fences, as well as for charming table arrangements of red and green. Climbing nasturtiums form good porch screens and furnish plenty of bloom for cutting. The canary-bird vine—with flowers quite like its namesake—comes in canary-yellow and lasts well after cutting.

The hyacinth bean grows fast and has flowers of purple and white. The cup-and-saucer vine (with the big name Cobaea scandens), spreads rapidly, sometimes running for forty feet, and has an unusual flower in greenish purple or greenish white, like Canterbury bells. (The seed should be set on edge—not planted flat).

The growing of gourds, with their curious shapes, is a sense of humor in action. There are the hop vines, the leaves of which our grandmothers used to dry to make yeast for their bread, as well as for a drink to cure—not make—a headache.—Earle W. Gage, N. Y.

THE RED STAR OIL STOVE BURNS OIL OR GASOLINE



Cooks as fast as gas

This is the famous Red Star "Lively Heat" Burner that burns oil or gasoline with equally good results

"We prepared dinners for thirty hungry harvest hands"
—says Mrs. John S. Hurie, Tallula, Illinois

Dear Sirs: "There was a time when I thought 'cooking for farm men' had to be done on a red hot coal range.

"Now, in a cool kitchen, I have the same intense 'Lively Heat' from a Red Star Oil Stove on which we recently prepared dinners for thirty hungry harvest hands.

"I made pies early; when meat, vegetables, and rolls were done, I kept them hot in the oven, the door open and the 'Lively Heat' burners low. This week I made preserves; also cold-packed beans. I put them on over adjusted 'Lively Heat' burners and forgot them for two hours. There is no waste in fuel; no dirt; no heavy coal buckets; no black cooking utensils. My improved disposition since I am not 'dying from the heat,' is worth the price of the stove to my family."
(*Signed*) MRS. JOHN S. HURIE.

Thousands of women, like Mrs. Hurie, have found the Red Star Oil Stove, with its wonderful, *wickless* "Lively Heat" Burners, the final answer to their cooking and baking problems.

Go to the nearest Red Star dealer. See a demonstration and be convinced. Made in two to six burner sizes and at a price for every purse. In smaller sizes cost no more than ordinary oil stoves. If the list below does not contain a dealer near you write us at once. We will send the Red Star book *free* and the name of a dealer near you.

THE DETROIT VAPOR STOVE COMPANY, Dept. 111, *Detroit, Michigan;* makers of famous Red Star Oil Stoves and White Star Gas Ranges.

Steers, good to choice (Lancaster)..........	11.25	10.62½	11.00	9.50
Hay, Number 2 timothy, baled (Phila.)......	21.50	21.50	21.50	20.50
Wheat, No. 2 red winter (Philadelphia).....	1.52	[illegible]	1.51	1.60
Oats, Number 2 white (Philadelphia).......	.61½	.61½	.63	[illegible]

Strawberry Season Reaches Peak

Review of the Week Ending June 11

POTATOES—The new potato market opened firm but as the week progressed heavy supplies and a slack demand caused a weaker tendency. On Saturday prices dropped sharply. Early in the week Cobblers sold at $10 to $11 per barrel but closing prices ranged from $6.75 to $7.50. On Monday, June 13, the market opened weak with still further declines. Old potatoes held steady thruout the week but offerings were very light and trading slow at the relatively high prices.

STRAWBERRIES—Receipts of strawberries in Philadelphia and New York were heavy during the week, but the market was firm on the best stock. Luptons and Big Joe brought top prices. The Delaware season has passed its peak. Truck receipts in Philadelphia on several days totaled 14,000 crates. The New Jersey season is more active and on June 13, there were 150 crates of Pennsylvania berries offered.

EGGS—Receipts of eggs in New York were somewhat lighter and the market was generally steady. Some lots moved into storage at slightly lower prices. Toward the close of the week there was a firmer tone on fancy nearby stock, and prices were higher. Many dealers still had a surplus on hand.

HAY—The hay markets were inactive under moderate receipts and a limited demand. Timothy was firmer but prices were generally unchanged. Alfalfa markets continued dull. Country loadings were generally small due to farm work and unfavorable weather in some sections.

POULTRY—The live poultry market in New York was generally satisfactory. Fowls met a fair demand and broilers sold readily. Prices advanced on fowl and old roosters. The dressed poultry market was steady with broilers and fowls moving freely.

GRAIN—Prospect of a lighter winter wheat crop resulted in a good demand for wheat and higher prices. Rye advanced 6 to 7c per bushel and sold readily. Corn dropped about 8c per bushel due to heavier receipts and more favorable weather conditions.

FEEDS—The feed market was slightly weaker with good pasturage causing a lighter demand. Bran was lower but middlings and red dog were steady. Linseed meal was firm in the East while cottonseed was weaker. Hominy feed was weaker.

LIVESTOCK—Hog prices were lower on the Chicago market at the close of the week. Beef steers advanced sharply while cows, heifers, vealers and heavy calves advanced. Stockers and feeders were higher. Fat lambs, yearling wethers and fat ewes sold at higher prices with fat lambs showing the most gain.

BUTTER—The demand was unsatisfactory and trading was slow. The market was unsettled and prices somewhat lower. Buyers were purchasing for immediate needs only and were placing very little stock in storage. Receipts were 21,695 tubs heavier than the previous week.

What of Our Boys and Girls?

(Continued from page 3)

Opportunities to attend socials, parties and picnics seem about equally available to both town and country and the town young people do not appear to have as much advantage in attendance at movies as one might anticipate.

Farm girls appear to have more leisure for sports, games and hikes than their brothers, and indeed, excel their village sisters in this regard. Town boys have the best of the situation, however, no doubt due to demands upon the farm boy for assistance in the field and barn.

Farm boys and girls are apparently very much handicapped in comparison with the village youth in the matter of musical instruction and diversion. The vote is practically two to one in favor of the village when it comes to membership in a band or musical group, while individual opportunities to engage in singing or the playing of any instruments are also with the town youngster. Attention of school authorities and parents is called to this lack in the cultural opportunities for farm youth as those two groups are apparently in the best situation to provide the remedy.

Farmers Own More Automobiles

Questionnaire replies indicated that more farm homes have telephones and automobiles than do the village homes, but fewer have running water, phonographs and radios. Apparently the farmer gives more attention to communication and transportation and less to home conveniences and entertainment than his city brother.

While eighty-five per cent of the homes covered in the replies have water in the kitchen, only twenty-one per cent have bath tubs and eighty-seven per cent have outdoor toilets.

Health authorities point to the fact that the death rate per thousand inhabitants is decreasing faster in large cities than in the open country. However, the small town appears less healthy than either the farm or large city. Apparently the small town encounters the dangers of massed inhabitants without the advantage of sufficient finances to provide adequate protection.

The practice of junior extension workers in advocating the selection of farmers as leaders for agricultural clubs is apparently justified by replies indicating that the larger number of farm boys look to some farmer, other than their fathers, as their exemplar and ideal. Ability and character are the leading traits influencing the choice.

Parents Influence Boys' Ideals.

Town boys are more apt to make an ideal of their fathers, while character comes first and ability second in their minds.

Apparently a farmer must be successful in his business first and be a good citizen secondly, to merit consideration as the ideal for his neighbor's boy, while the responsibilities of the village parent are reversed.

It is the conviction of the writer that two other factors influence farm boys and girls in their like or dislike of the farm and the choice of their life's work. The two are quite closely connected and involve the parents' success in the business of farming and their expressed attitude on the question of whether or not they wish their children to continue in that vocation.

A statement recently appeared in one of our large daily papers purporting to show that when divided into five main groups with respect to relative ability to make an annual profit, only that group of farms which was relatively the most profitable has continued to make as much or more profit since the close of the World War as they did previous to it. It is easy to understand how life on a profitable up-to-date farm would appeal to the boy or girl living thereon and how easy it must be to become discouraged where life is hard and conveniences lacking.

It has been our experience that the successful, wide-awake farmer wishes his boys and girls to continue farming and that the unthinking misfit does not wish his boys and girls to have to experience what he has gone thru. The responsibility for keeping the right type of boys and girls on the farm rests largely with the present-day parents.

(To be continued)

The Market Place

By W. R. WHITACRE
Pennsylvania Bureau of Markets

WHAT would you answer if someone asked a question that was put up to me the other day?

"How do you account for the low prices of farm products when our population is increasing and so many are leaving the farm?"

The man who asked this question is located near Philadelphia and, I understand, ships his products to this market. In the first place there is a question as to "how low is low?" for what one man may consider a low price may be a fair price to another. Prices in the long run are only relative and the man with a big overhead and high production costs is going to find it hard to make a living even at high prices.

The fact that some farmers are leaving the farm and that population is growing does not indicate that there is or will be a shortage of food. I read a report that showed that during the years 1917 to 1919 the annual average rail shipments of the sixteen principal fruits and vegetables amounted to 478,540 carloads. For the years 1924 to 1926 the annual average was 848,099 carloads, which was an increase of 77 per cent compared with ten years ago. In contrast to this increase, the total population during the period increased only 12 per cent.

Move to City Has Little Effect

It does not seem to me that the man who leaves the farm and goes to the city to work makes much of a dent in the supply of farm products. If he leaves a good farm usually he is replaced by another man who will grow even more produce. If he leaves a poor farm the effect is even less apparent for it never did cut much of a figure in production.

When you see large acreages of farm land being turned over to real estate development or abandoned it seems that it must make a difference to the supply. The point that we overlook is that today we draw our food supply from all over the globe and the small community that we know is almost negligible when the total production is considered. Modern transportation has opened up new acreages better suited for production and many are learning that they must produce more and more cheaply.

I have had four arguments about this question so I know there is plenty of room for further discussion. One benefit of a good argument is that it makes you think and each time you discuss a problem you get new thoughts and ideas. I know I didn't answer the question as to whether prices are low or high but I do not think we can gain much from that. It seems to me that no matter whether you consider them high or low, the growth of population and the movement from the farm during the past ten years are not to blame.

Market Men Gather in Reading

AT THE first June meeting of the newly organized Pennsylvania State Association of Markets, held in Reading, June 6, H. A. Hanemann, of the Pennsylvania Bureau of Markets and Secretary of the association, outlined the purpose of the new organization as follows:

1. To work for the general improvement of existing marketing methods in Pennsylvania municipalities.
2. To bring about closer coordination of the work of municipal, state and private market officials, particularly for the purposes of developing closer contact between producer and consumer and of encouraging the producer to market better quality food-stuffs in Pennsylvania.
3. To promote the general interest of public and private markets in Pennsylvania.
4. To sponsor and support constructive marketing legislation in this state.

Other speakers were: H. Seidel Throm, president of the organization; Daniel F. Printz, of Reading; H. L. Shank, of Lancaster, a farmer and the president of the newly formed Farmers' Market Company in that city, and F. H. Ettien, Superintendent of the Reading Terminal Market, Philadelphia.

Thirty-five representatives and owners of farmers' markets in the cities of Harrisburg, York, Lebanon, Lancaster, Reading and Philadelphia attended the meeting. After the close of the meeting those present made an inspection of the recently remodeled buildings of the Farmers'-Kissinger Market House Company at Reading.—H. A. H.

County News and Comment

Armstrong County, Pa.—Very disappointing corn weather continues. Oats and meadows are showing good promise and pasture is abundant. The late April and early May freezes had an injurious effect upon wheat and rye. Peaches, plums, pears and cherries will be almost a failure. Apples gave early indication of a full crop but the June drop will cut the crop to less than 50 per cent of normal. Potato spraying has not yet commenced. Much seed corn was low in vitality; is not showing a uniform stand. Garden vegetables are making a creditable showing. Spring farrowed pigs growing nicely, entirely free from hog cholera. Heavy losses among chickens. Prices: Good work horses $150 to $200 each; milk cows, $50 to $150; good eight-week-old spring pigs, $12 to $15 pair; baled hay, $25; straw, $14; wheat, $1.40; corn, $1.25; oats, 60c; potatoes, old, $2.25, new, $3.50; butter, 45c, eggs, 25c.—W. M. P., June 6.

Berks County, Pa.—Potatoes about three inches high. Most of the corn had its first cultivation, while some farmers have started to replant. Grass fields look good. Wheat and rye promises fair return. Public roads are being put in good condition by the supervisors and farmers. Work on the different state roads is progressing nicely. Farm labor is more plentiful than last year. Most of the old wheat and corn has been sold. Apple prospects about the same as last year. Eggs, 21c; hay, 20c; oats, 52c; corn, 70c; wheat, $1.35.—W. N. M., June 6.

Butler County, Pa.—Cold, backward weather still prevails in this section. Ground was fit to work only four or five days during May. Some corn planted, some ground yet to plow and in low flat ground farmers did not even get their oats sown. Early-sown oats looking fine. Grass and wheat growing nicely. Wheat thin on ground. Mortality high among young chicks, mostly coccidiosis.—F. E. P., June 6.

Centre County, Pa.—The weather with us continues wet and cold. Some farmers have had to replant corn. Numerous deer have been seen in the western end of our county. They are destructive to farm crops. Efforts to frighten them away have not been successful. The price of wheat has advanced, being sold today at $1.35; rye, $1; corn, $1, oats, 45c; butter, 45c; eggs, 22c.—A., June 4.

Cumberland County, Pa.—Weather continues cool and rainy. Corn planting much delayed. Corn planted earlier shows a poor stand; quite a number of farmers are replanting. Potato stand is good. Indications for oats, wheat and grass crops are good. Some early seeded wheat has been reported affected with fly. All fruit has been more or less injured by late frosts, especially strawberries and cherries. Sheep-shearing about finished, the increase of the wool crop is 10 per cent over last year. Poultry raising increasing. Prices: eggs, 20c; butter, 50c; lard, 20c; wool, 30c; lambs, 16c; hay, $20.—A. L. B., June 7.

Juniata County, Pa.—Cold, wet weather delayed the spring planting, some corn to plant yet. Many who planted earlier are compelled to replant. Indications point to a big wheat and hay crop. Oats is making an excellent start, early varieties of fruit damaged by late frosts. More chickens raised this year than ever before. Not many turkeys being raised. Wheat $1.30; corn, 95c; eggs, 17c; butter, 40c.—C. B. L., June 6.

Montgomery County, Pa.—Corn planting is mostly finished. Some replanted on account of poor seed and wet cool weather. Oats is growing fast as is also grass. Wheat that came thru the winter all right is looking good, but the acreage will be about one-half of last year's. The potato acreage was greatly increased. Machinery dealers were sold out of some potato machines. There has been increased activity in the cow testing for T. B. Some of the large milk companies are trying to get their shippers to sign up. The new concrete road connecting Pottstown and the Perkiomen Valley is now open. It will be a great help to the farmers of the upper end of the county. Prices: wheat, $1.30; corn, 80c; oats, 70c; eggs, 30c; poultry, 25@30c.—C. N. D., June 2.

Northumberland County, Pa.—With more than half of May rainy and cold, farmers are having real difficulty in getting corn and potato crops planted. Some fields are being replanted. Seed corn is scarcer and of poorer quality than for some years. Oats all sown and show up nicely. The hay crop, mainly timothy, is short and late. Wheat making rapid growth with some fields lodging before coming out in heads. Prices: 3 per cent milk, $1.90; calves, 12c; hogs, 12@14c; chickens, 28c; corn, 75c; oats, 50c; wheat, $1.40.—W. C. G. May 30.

Somerset County, Pa.—Bright sunny days are with us after a long rainy spell. Farmers who planted their corn during the wet weather are replanting. Potatoes, oats and grass looking fine. T. B. testing in Brothers Valley Township was finished May 28th. Only 11 reactors in 85 cattle tested. P. C. Linderman, tester. Cows keeping up in milk flow. Pasture in good condition. Prices: hay, $15; oats, 60c; buckwheat, $1; old potatoes, $2; new, $4; 3.5 per cent milk, $2.44 cwt. for April. Highest price paid for April milk since April, 1923. Eggs, 22c; old chickens, 25c; veal calves, 9@11c.—H. W. B., June 10.

Eastern States Farmers' Exchange

Big Gain in Year

Eastern States Feeds Are Making Good in Pennsylvania

The Eastern States Farmers' Exchange received orders for 125 more carloads of feed and grain during the month of May 1927 than during the same month of 1926. For the first 5 months of 1927 the Exchange is running 295 cars ahead of the same 5 months in 1926. Farmers in eastern Pennsylvania who had heard good reports of this great cooperative from farmers in Delaware and New England succeeded last spring in having the Exchange extend its service into Pennsylvania. That farmers in Pennsylvania find the service valuable is best demonstrated by comparing the number of cars shipped in May of this year with the number of cars shipped last May.

In May 1926 the Exchange shipped 6 carloads of feed and grain into Pennsylvania and in the same month of 1927 it shipped 19.

The increase in carloads ordered by farmers of Pennsylvania has been a gradual month to month increase. Groups of farmers about a shipping station have learned of the satisfaction which Eastern States service has given to neighboring groups and they have tried an initial carload. Actual experience with Eastern States feeds has confirmed the favorable impression made upon these farmers by early reports and they have not only continued to purchase feed and grain regularly thru their Exchange but have in many cases been instrumental in introducing the service to groups at adjacent stations.

The Eastern States Farmers' Exchange is a non-stock non-profit cooperative purchasing organization owned and controlled by the farmers it serves. Therefore its sole object is to secure for feeders feeds that will produce maximum returns in terms of growth, health, and production.

Until you compare on your own farm the difference between Eastern States quality feeds selected in this manner and the feeds you have been using, you cannot appreciate the reason why the list of Pennsylvania Eastern States boosters is increasing so rapidly.

Where records are kept Eastern States Open Formula Feeds prove their worth.

For information on the Eastern States feed service for poultry and livestock, a service which should not be confused with car door service offered by private manufacturers through dealers or groups of farmers, write the office.

United States Experiment Stations Study Dairy Problems

(Continued from page 2)

state experiment stations are cooperating with the Dairy Bureau in this study and 130 complete records of the internal organs and external conformation have been secured on cows of known producing ability. Many interesting correlations are evident, e. g., the depth of the chest is more indicative of the size of the vital organs than is the width of the chest.

Thru extensive udder studies it is hoped that eventually an examination of the udder of a heifer calf will reveal what that udder will be likely to do in the way of milk production after the heifer freshens.

Further studies show that contrary to former belief, most of the milk yielded by a cow at a particular milking is already in the udder when milking begins. A cow was killed instantaneously, her udder severed from the body and held at normal temperature until it could be milked. The cow had been yielding two and one-half gallons at a milking prior to being slaughtered and her udder yielded this much milk after slaughter, or 100 per cent normal.

Capacity Greater Than Supposed

Two other cows gave 74 per cent and 67 per cent respectively of the normal yield, the average for the three cows being 80 per cent. A measured quantity of fluid was then pumped into the udders and it was found that the average amount of fluid held by each udder was the equivalent of 63 pounds of milk. The udders of several dry cows were found to contain on the average, the equivalent of 25 pounds of milk, while the udder of a beef cow had capacity for but 8 pounds of milk. It would, therefore, appear that the capacity of the udder for carrying fluid is greater than has been commonly believed.

Sprouted oats have been fed to cows that had failed to breed. Eleven cows that were giving breeding trouble have conceived during the past year. Some of these were reactors to the abortion test and some were not. Such cases as were successfully overcome were functional and not pathological.

Mineral and protein requirements of dairy cows are receiving considerable study in the Bureau. The function of reproduction is one of the first to give way to faulty feeding. Such procedure may also produce disease not attributed to feeding. Animals need in their rations twelve different mineral elements, eighteen amino acids and five or six elusive substances known as vitamins. Cows get these vitamin factors mostly from hay, grain supplying lesser amounts. Good hay, therefore, solves most of the difficulties. Alfalfa is better than timothy hay, not necessarily because it contains more protein and calcium but more especially because the calcium is more assimilable and because the alfalfa contains the other dietary principles. Silage does not help much from a vitamin standpoint.

Quality Hay Produces More Hay

The quality of hay is important. Experiments with high grade hay showed that it produced considerably more milk than ordinary No. 1 hay. The addition of mangels to the ration gave better results than from hay and grain alone, unless the hay was of the finest quality.

Feed standards usually call for .7 lb. of digestible crude protein daily for the maintenance of a 1000-lb. animal. For milk production purposes, additional protein is provided to the extent of 1.6 to 2 times the amount of protein in the milk. Recent experiments by some investigators indicate that this much protein is unnecessary. Some say that .5 lb. digestive protein daily for maintenance per 1000 pounds live weight of animal plus 1½ times the protein in the milk for production purposes, is all that is necessary.

Results of Test Feeding

In order to get further light on the subject the Dairy Bureau fed cows according to the Savage standard, i.e., 7 lbs. protein per 1000 lbs. live weight for maintenance, plus twice the protein in the milk for production purposes. The allowance of protein was then cut 20 per cent or to about the amount recent workers have claimed to be sufficient. The milk flow dropped 35 per cent in fifteen days. The protein supply was then doubled and the milk flow increased 35 per cent in 12 days.

The kind of protein is also of importance. A combination of corn and milk proteins was found to be superior for milk producing purposes to a combination of corn and gelatin. In answer to a question, Dr. Carey who discussed this subject, stated that one will never injure a cow by feeding as much protein as the highest standards call for.

The crop rotation practiced at the Beltsville farm is corn 3 years, alfalfa hay 3 years. Pasture is permanent. This cropping system has resulted in a profit twelve out of the last thirteen years. The hay field is approximately three tons per acre while corn yields eleven to twelve tons per acre.

Little Choice Between the Two

Sweet clover for pasture has been compared with a mixture of timothy red top, orchard grass, blue grass, red clover and alsike clover. The sweet clover yields a little more pasture per acre, but the necessity of reseeding it every two years makes the cost of maintenance somewhat higher. Therefore, the cost for a given amount of pasture grass is about the same in each case. The sweet clover comes no earlier in the spring, is more subject to injury by tramping and is more likely to freeze out than the mixed grasses.

The four 150-ton silos at the farm were filled last fall without tramping or even leveling off the silage except at the top to keep the blower from clogging up. As much corn as usual was put into the silos and it kept as well, the only drawback being that the cobs had a tendency to collect in spots. These, however, got mixed with the rest of the silage when it was taken out so that no inconvenience in feeding resulted.

Editor's Note:—Mr. Borland will discuss more of the problems being studied at the Beltsville Farm in later issues.

Value of Pennsylvania Plan Recognized

THE State of Washington will use the Pennsylvania plan for the control of bovine infectious abortion, according to a letter received by Dr. T. E. Munce, director, Bureau of Animal Industry, State Department of Agriculture, from Dr. Robert Prior, who is in charge of the animal disease work in Washington.

The Pennsylvania plan, which is based upon sanitary principles, repeated blood testing and the elimination of reactors, was developed by the Bureau of Animal Industry and adopted in 1921.

In giving his opinion of the plan, Doctor Prior said, "I believe it is the best that I have seen bearing on that work."

CARBOLA
The Disinfecting White Paint
Paints and Disinfects—Dries White
Use as a Paint or Powder
Spray it Brush it Dust it

Make Your Farm Produce More Dollars

CARBOLA will help you get more out of poultry—chicks—hogs—cattle. Makes orchards and gardens more productive, too.

CARBOLA

is a pure mineral product (NOT LIME) mixed with the strongest disinfectant known. Entirely harmless to man, bird and beast.

More Milk

is the sure result of using CARBOLA regularly to disinfect cow barns. Because CARBOLA quickly kills the pests that keep down milk production.

Fatter Hogs

are certain when pens are free from insects and parasites. Dusting or spraying with CARBOLA keeps pens disinfected.

More Eggs

are always gathered from healthy hens. An occasional dusting with CARBOLA puts an end to lice and mites—and is the start of real poultry profit. CARBOLA is good for gardens, too.

Spray It—Dust It

CARBOLA dissolves readily in water and can be applied with any spray gun—or use it the new way—by dusting. A few cents' worth of CARBOLA makes dollars of difference in farm profit.

Get this Big Dust Gun

Strongly made. Heavily enameled. Will last for years. Has big chamber with extra large opening for filling. Length 17 inches. Get it from your CARBOLA dealer or order from us direct.

CARBOLA CHEMICAL COMPANY,
Natural Bridge,

PEDIGREED BIG TYPE CHESTER WHITES 125 fall pigs, 25 service boars, 85 bred sows, priced low, shipped on approval. **C. E. Cassel, Hershey, Pa.**

Veterinary

Conducted by Dr. J. F. Shigley
Associate Professor of Veterinary Science, Pennsylvania State College, and Veterinarian in charge of College Livestock

Advice thru this department is free to our subscribers. Each communication should state history and symptoms of the case in full; also the name and address of writer. Initials only will be published. We invite readers to make use of this service. Clippings from this column when properly preserved and classified, make one of the most valuable medical symposiums a farmer-stockman can obtain.

CAKED UDDER.—We have a cow that has been fresh six weeks with her second calf. She has lumps in the udder which appeared before she was fresh. The udder was caked afterward and is yet. She was affected this way the first time she freshened. Her mother and her grandmother had the same trouble. What is the cause of this?—C. B., Kerrmoor, Pa. The lumps in the udder represent areas where inflammation is present or has resulted in a new growth of tissue. Bathing with warm water, milking several times daily and massage, usually show favorable results. This condition is not hereditary but may be evident with an especially good milker.

COW FAILS TO SHOW HEAT.—We would like to buy a fine Guernsey heifer if we can breed her, but she has shown no definite signs of being in heat. She keeps up well in her milk and test. Any advice you may give us will be very greatly appreciated.—Mrs. B. F., Mercersburg, Pa. A veterinarian having some experience in handling the reproductive organs would be able to examine this cow and tell you of the possible breeding future of the animal. There is no drug that can be administered that will serve as a substitute for a careful physical examination. There is, in all probability, a persistent corpus luteum in one ovary that inhibits heat. This could be squeezed out and heat would appear in from three to seven days.

GOAT NOT DOING WELL.—I have a three-year-old goat. I am expecting her to come in about the middle part of June. She is very quiet but will not eat her feed. Please advise what to feed her and also if I should allow her to go in the pasture with the rest.—A. R., Freehold, N. J. You are advised to keep this goat in a separate enclosure from the others and give her special attention. By that I mean the provision of grain, preferably corn, inasmuch as she is not eating very readily. Pasture should be provided as you, no doubt, have an access to clean water and salt. If there is any evidence of constipation small doses of castor oil may be given until after the goat has given birth to the young. It is doubtful if any additional medicinal treatment would be indicated in this case.

Our Readers' Classified Advertising Department

A market place to buy or sell at little expense. Over 100,000 farm families read Pennsylvania Farmer every week. Rate 6 cents a word each for one, two or three consecutive weekly insertions, 5 cents a word each for four or more insertions. Count each number and initial and send cash with order. Orders, discontinuances or changes of copy must reach us by Wednesday of week preceding date of issue. All advertisements set in uniform style, no display type or illustrations. Poultry advertising may run here, but if displayed or illustrations used must run in display advertising columns at commercial advertising rate (65 cents per agate line). Livestock ads not accepted in this department. Minimum, ten words.

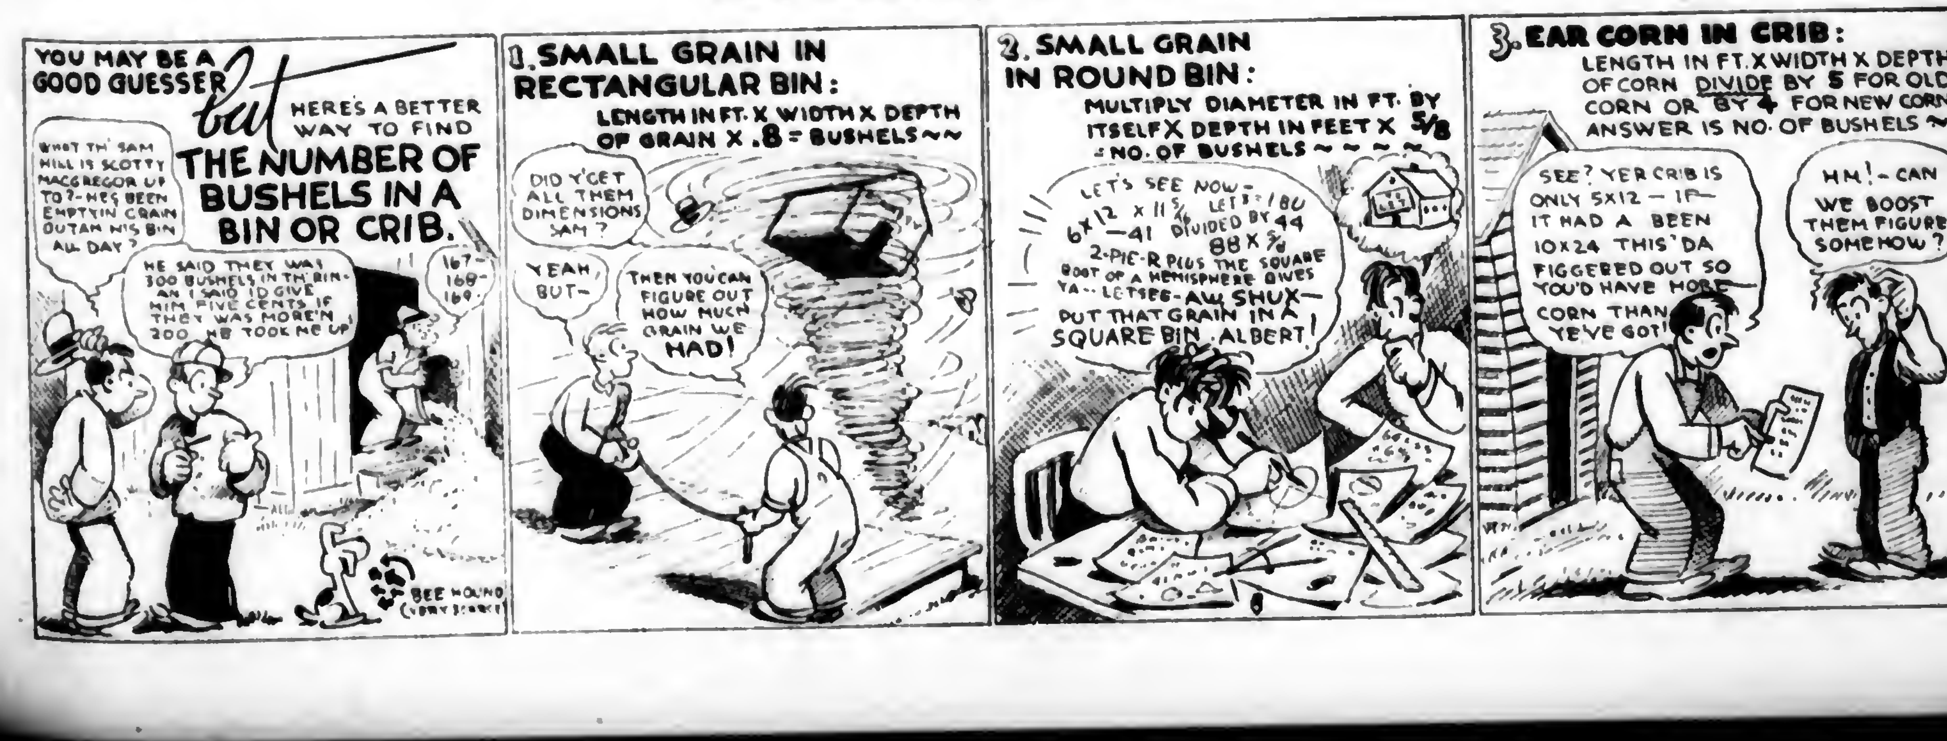
Herb the Handy Man Tells How—



YOU MAY BE A GOOD GUESSER but HERE'S A BETTER WAY TO FIND THE NUMBER OF BUSHELS IN A BIN OR CRIB.
WHOT TH' SAM HILL IS SCOTTY MACGREGOR UP TO? HE'S BEEN EMPTYIN' GRAIN OUTAH HIS BIN ALL DAY!
HE SAID THEY WAS 300 BUSHELS IN TH' BIN AN' I SAID THEY WAS MORE'N 300 HE TOOK ME UP!
167-168-169
1. SMALL GRAIN IN RECTANGULAR BIN: LENGTH IN FT. X WIDTH X DEPTH OF GRAIN X .8 = BUSHELS~~
DID Y'GET ALL THEM DIMENSIONS SAM?
YEAH BUT-
THEN YOU CAN FIGURE OUT HOW MUCH GRAIN WE HAD!
2. SMALL GRAIN IN ROUND BIN: MULTIPLY DIAMETER IN FT. BY ITSELF X DEPTH IN FEET X 5/8 = NO. OF BUSHELS ~~
LET'S SEE NOW- 6X12 X 11¼ ... 88 X 5/8 ... ROOT OF A HEMISPHERE GIVES YA- LET'SEE- AW SHUX- PUT THAT GRAIN IN A SQUARE BIN, ALBERT!
3. EAR CORN IN CRIB: LENGTH IN FT. X WIDTH X DEPTH OF CORN DIVIDE BY 5 FOR OLD CORN OR BY 4 FOR NEW CORN ANSWER IS NO. OF BUSHELS ~
SEE? YER CRIB IS ONLY 5X12 — IF IT HAD A BEEN 10X24 THIS'DA FIGGERED OUT SO YOU'D HAVE MORE CORN THAN YE'VE GOT!
HM!- CAN WE BOOST THEM FIGURES SOMEHOW?

Friendly Talks

By EDGAR L. VINCENT

WHEN a man is astraddle the fence, the side on which he gets off makes a lot of difference.

Not in a good many years have so many farmers been astraddle the fence than at the present time. Seems as if we find them everywhere we go; and I know enough about it to understand that it is a decidedly uncomfortable position.

Only yesterday a young farmer said to me, "I don't know how to shape my farm operations." By a little inquiry I found out that the weather had been so wet that he had not sown his oats, his potatoes crated up for seed were still in the cellar, when they ought to be coming up, and not a kernel of corn was in the ground. It surely did seem as if he were astraddle the fence and uncertain which side to g t down on.

The Other Side Is No Better

And it has gone so far with a good many farmers that they have half made up their minds to leave the farm and go to doing something else. With most of these it is a pretty serious question which side of the fence they shall get off. One thing I have noticed, and that is that often when the grass looks knee deep on one side of the fence, we find when we get over that it is not a bit better than that on the other side.

Sheep and cows many times have this longing for the other side of the fence. How short the grass is on the home side! All stamped down, too, and gnawed clear to the roots! But when they land on the other side, maybe it is with a broken leg or a sore head, and, anyhow, the grass is not a bit better than it was where they came from.

So it does make a difference which side of the fence we get off when we are sitting astraddle the top rail. It is not easy to see to the end, no matter what we undertake. And it is great to hold right on, unless we are positive that we better let go where we are. The letting go may be easy, but the landing is not so good.

We Have More Than One Chance

One season does not make up a lifetime. A year is a small part of our allotted time. We can redeem the losses of this year another season. God never cuts us off with a single chance.

If the season is short at one end it may be long at the other. When frosts come late in the spring, they may hold off along into early winter. Some of our best garden stuff comes in time to help out a lot in August and September.

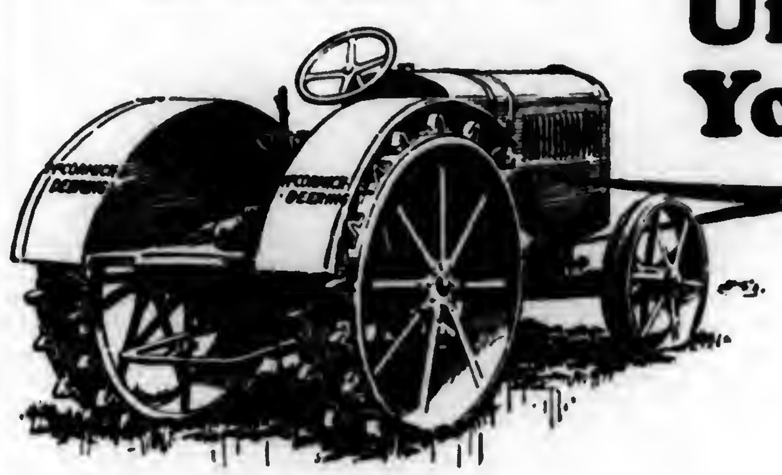
So let's be careful which side of the fence we get down on. As a general proposition it is good to stick to one's job, and stick like a dog to a root. We may be compelled to change our plans and put in one crop where we had intended to sow another. Success often depends on one's ability to adapt himself to circumstances.

And how many times have we found it true that when hard luck gives us a wallop in one place, fortune soon changes and we get a big lift over the hard place in the road. If we only push on thru the shadows we shall soon come out into the clearing, and how bright the sunshine looks then!

Are you astraddle the fence? Be careful which side you get down on!

"What is your chief worry?"
"Money."
"I didn't know you had any."
"I haven't."—Witt.

Drawbar, Belt, and Power Take-Off—
Ample Power for all Jobs at all Times



Don't Underpower Your Farm!

Invest in 15-30 Three-Plow Power

USE liberal three-plow power! Don't overlook the many good, sound, practical reasons why you are investing in tractor power. You want to do much more work with the same or less labor expense. You want to handle each field, each crop, each job faster. You want to extend your farming operations in various directions, do each job at the right time, cut down weather risks, etc.

Be prepared for the many new calls for power—drawbar, belt, and power take-off—that may come along during the next few years.

The man who replaces horses with a small tractor is taking a big step forward. The man who goes to the three-plow tractor at once is getting himself ready for power farming on a broad scale, and for profit. He can also add to his income by outside field work, threshing, silo filling, grinding, shelling, sawing, baling, and hauling. He can do road work for the community. He can earn hundreds of dollars a year by custom work with the 15-30.

In the long run the McCormick-Deering 15-30 tractor is cheaper to buy than the two-plow tractor. It is able to earn *extra* money so easily. On the well-handled farm the extra cost is often returned to pocket in a single season, and then the liberal power of the 15-30 goes on making a profit for its owner in the proportion of three-plow to two-plow. When you buy your tractor, go into this thoroughly. Look the 15-30 over at the dealer's store.

"Please accept my thanks for equipping me with a 15-30 McCormick-Deering. The smaller tractor gave me good service, but the 15-30 is much more economical, working at a greater saving in man hours as well as fuel. I do not see how I could handle my farm on a paying basis without the McCormick-Deering."
E. A. STAMBAUGH,
Green Park, Pa.

15-30 Power Advantages

ALL along the line the McCormick-Deering 15-30 *adds 50 per cent to the day's work of the smaller tractor without adding to labor costs!* A 3-furrow strip instead of 2; 12 acres plowed per day instead of 8; 30 acres double-disked as against 20. Time is saved, labor is saved, work is increased, and costs are reduced in every season.

The 15-30 will handle threshers, ensilage cutters, etc. with greater efficiency and profit. In grain and corn harvesting, 15-30 power is essential for power take-off operation of the *harvester-thresher* and the *corn picker. Be ready in the future to handle new equipment such as these two important modern machines.*

The McCormick-Deering Harvester-Thresher saves 20 cents per bushel over old methods in the harvesting of grain. It requires 15-30 power.

The McCormick-Deering Corn Picker, sensation of the corn belt, goes into the standing corn and does the work of six hand huskers. The 15-30 tractor does the work.

Rambles of a Pennsylvania Fruit Grower

XIV. By the Rio Grande

CROSSING the Mississippi on an auto trip west is like crossing the Rubicon—you don't know what is ahead of you, especially in the ways of roads, and can only hope for the best. So you fortify yourself with a liberal helping of "gumbo" or some other strange Creole dish at one of the old French restaurants in New Orleans, perhaps at "Antoines" or "Begneys," and take the gravel road westward with a feeling of adventure. The broad high levees which shackle the sullen river, the great fields of rice and sugar cane and the rich black soil of this alluvial delta are in sharp contrast with the flatwoods and sands of western Florida a few miles eastward.

The rain descends and the cloud bursts. Soon a sheet of water covers the highway. In a low place an impromptu river submerges the road. The water reaches the carburetor, splashes into the distributor—and there we are! It is well to pass lightly over the painful proceedings that follow, or to indicate by asterisks that there is a break in the continuity of the story.

East Texas Trials Better Forgotten

Much might be said, also, of a certain fifty-mile detour on the black adobe soil of east Texas, but it is better to dwell on the pleasant things in life. Beyond San Antonio, center of the Spanish dream of empire in the Southwest and home of the Alamo, the shrine of Texas liberty.

The prairies of east Texas, with their great herds of cattle, merge gradually into the foot-hills; the ranch gives place to the range. Then we are in the West of the small boy's dream; the West of illimitable space, of purpling hills and gray valleys, of sage brush, cactus and greasewood on the mesas and cottonwood along the water courses; of cow-boys with sombreros, chaps and lassos, but minus the traditional six-shooter in each boot leg. One who has been accustomed to towns and gas stations a few miles apart finds a seventy-five-mile jump across the desert a novel experience especially if there is a blow-out midway.

A Bumper Gate Blocks the Way

The dirt or gravel roads are good, when dry. Numerous abrupt concrete dips at the bottom of shallow gullies are an effective barrier to speeding. They are dry now but the water gage on the side, graduated up to seven feet, shows that travel over the great American desert has its diversions when there is a cloud burst. The "Bumper" gate is another interesting feature. The highway is blocked by a solid wooden gate ten feet high and seemingly impassable. You draw close, go into low, and bump it hard. Then the gate swings open and shuts behind you.

After days of desert travel, the restful green of the irrigated fields in the upper Rio Grande Valley is welcome. Here, a century before the Pilgrims landed on Plymouth Rock, the Spanish explorers and padres laid the foundation of modern irrigation practice. El Paso boasts of over 330 cloudless days a year, which is quite in contrast with our Pennsylvania weather. The rainfall is about nine inches and the altitude 3700 feet. Land, with water, is $200 an acre. Irrigation is expensive. It costs nearly twice as much to raise crops here as it does in the East. The farmers complain of hard times. With cotton producing one bale (500 pounds) at 14c for last year and alfalfa yielding five tons an acre, there is little profit.

On the range, conditions are even

(Continued on page 17)

A Dining Room to Be Used

By ARTHUR C. PAGE

IN PLANNING the new house we said we would have a large kitchen for several good reasons, one of which was so the family could eat in there at least part of the time. Now with that point settled, we hasten to say that we will have a dining-room, too, and expect to use it.

For the dining-room we must have plenty of windows, so it will be light and airy and cheerful, and the room must be placed so that the windows command a view of the yard, and if possible the front gate. This is the same as we specified for the kitchen. For supposing while the family is at the table the dog barks, and you know somebody has come into the yard, there is quite an advantage to be able to see the gate and the driveway right from the head of the table, instead of having mother or Willie jump up and go to see who's there.

A Tea Wagon Makes One Trip

The door from the kitchen to the dining-room ought to be a wide one, not a double door like a restaurant, but wide enough so a tea wagon or "Helpful Hetty" will go thru easily without crowding. The idea of using a wheel tray to carry in dishes of food, and to carry all the soiled dishes out to the sink at once, saves lots of steps when you get accustomed to it.

Some people like to have a cabinet built in the wall between dining-room and kitchen, with doors opening to both rooms. Then when the dishes are washed they are set into this cabinet from the kitchen side, and they are ready to take out on the dining-room side for the next meal. Servings of dessert can be put in the cabinet from the kitchen early in the meal, and when it is time to serve them, they are handy.

Buffet May Be Built In

The buffet, that we used to call a sideboard, is pretty important. If you are sure of just what you want, you can order a buffet "in the white," that is, all complete except that it has no hardware and no varnish, and build it right into the house. Then you can have it finished in the same color as the rest of the woodwork. Of course, if you may want to move or change around, you might want to buy an ordinary buffet. A good buffet is a step saver, for it has a place to keep dishes, linens and a host of things needed in the dining room when a big meal is to be served.

As to the size of the dining-room it needs to have capacity for a real crowd of folks at the table, remembering threshing crews, and all the relations you'd like to have at Christmas, Thanksgiving or when you entertain the Sunday school class. But if you build the room as big as you would like for all that, it will make a pretty big house, so here is an idea for increasing its capacity without building it so big. Put the living room, which is the modern parlor, at the end of the dining-room, with a big cased opening or colonnade between. Then you can stretch the table right on thru.

Keep Cats To Improve the Clover Crop?

Well, Maybe Not, But the Idea Isn't As Fantastic As It Sounds

By E. M. GRESS, Ph.D.
Pennsylvania State Botanist

OLD maids love cats;
Cats eat mice;
Mice rob bumblebees' nests;
Bumblebees pollinate clover.

Therefore, as Huxley suggested, the more old maids, the more cats; the more cats, the fewer mice; the fewer mice the more bumblebees; the more bumblebees, the larger the clover crop. Furthermore, according to Carl Vogt, one of England's most important foundations of wealth is her cattle which feed principally on red clover; and Haeckel says that "Englishmen preserve their bodily and mental powers chiefly by making excellent meat (roast beef and beefsteak) their principal food.

The above jocular comparisons, with the exception, perhaps, of Haeckel's conclusion, are based upon rather sound logic, and considered seriously show the interdependence of plants, insects and other animals, including man and even the prosperity and progress of nations.

Of Basic Importance

Clover is one of the most useful plants in agriculture, the basic industry of human society. It ranks among the very best plants in maintaining the fertility of the soil. As a forage crop in feeding the meat-producing animals it is surpassed by no other plant.

"To live in clover," no doubt alluding to the eagerness with which it is eaten by the grazing animals and visited by the honey-loving insect, is extended figuratively to indicate a life of luxury and affluence among human beings. To dream of the clover flower is thought by some of the peasants of Europe to foretell a happy marriage, long life and prosperity, and to find a four-leaved clover is still considered by many a sign of good luck.

From the standpoint of science the clover possesses many points of interest for both botanist and chemist.

One Inside Other

The roots have the habit of forming small round growths called tubercles about the size of a head of a pin. Inside of these tubercles are small microscopic living plants called bacteria. These bacteria have the power to take from the air present in the soil the chemical element called nitrogen and, in some wonderful way, of manufacturing it into a substance called nitrate, which is a fertilizer most useful in the growth of farm crops.

Common red clover

Each of the three leaflets which form a clover leaf has a slight swelling on its stalks which is very sensitive to light. This swelling called pulvinus responds rather quickly to a change in light, which causes the leaves to droop at night into a so-called sleep position. This movement of the clover leaves is still more marked in some of the other plants belonging to this family. For instance, the leaves of the sensitive plant show a very marked visible movement at a slight touch.

The flowers of the clover plant form a compact, round or oval head which contains a large number of individual flowers whose structure is peculiar and fittingly adapted to insect pollination. Each flower has calyx, corolla, stamens and pistil. The persistent calyx has five sharp-pointed teeth. The corolla which is very irregular is composed of four petals: the large, prominent petal is called the standard or technically the vexillum, the two below or in front of the standard are the wings and the one below or in front of the wings is the keel which is in reality two petals grown firmly together. There are ten stamens, nine of which are grown together thus forming a tube with a slit along the upper side where the tenth separate stamen is located.

So highly specialized is the red clover flower that only the bumblebee can pollinate it efficiently. This was made very evident when clover was first introduced into Australia. It grew well and produced an excellent crop but no seed, and since it is a short-lived perennial plant, of course it soon disappeared. It was suggested that it might probably produce seeds if they had the bumblebee to pollinate the blossoms. The bumblebees were, therefore, imported and the clover, as usual, produced seeds.

It Requires a Long Tongue

The honey is at the bottom of the tube formed by the stamens and in the ordinary red clover flower this tube is about a half inch long, therefore, only the long-tongued bumblebee is able to reach the nectar. Sometimes the short-tongued bumblebee nips a hole in the tube and steals the honey without helping to pollinate the flowers.

In dry weather the tube may be so short that the honey bee may be able to reach the nectar as he is always able to do in the white clover. An interesting incident is related by Lovell in his book "The Flower and the Bee" which shows how a drought may affect the length of the flower tube of red clover.

A beekeeper in Ohio had two apiaries about two miles apart. At the one place there was plenty of rainfall while at the other there was a drought. The honey bees were so plentiful on the clover heads in the dry region that in mowing a field of clover the farmer and his horses were stung by the disturbed honey bees while no honey bees were found on the clover in the region of the plentiful rainfall.

Honey Bee Works in White Clover

The white clover (trifolium repens) so common in lawns, gardens and waste places has smaller flowers than the red clover and is, therefore, pollinated by the honey bee. The flowers of the white clover head have a peculiarity of turning down and becoming dark colored after they have been fertilized. This is very noticeable and is thought by some to be a signal to the bee that the honey has been taken. As the older flowers on the head are around the lower edge and are, therefore, visited first, a varying number of these on different heads is seen to be turned down while the upper younger flowers stand erect until they have been visited by the bee. Sometimes heads with but a single upright flower are seen, which in some localities are sought by children as "old-maid clovers."

OUR JOB is to serve our readers. Whenever you are puzzled write to us and we will help you if we can.

Don't be content with doing only your duty. Do more than your duty. It's the horse who finishes a neck ahead who wins the race.—Andrew Carnegie.

Farm Tenancy Increases

MORE than one-third of the farms in the United States, 38.6 per cent to be exact, are farmed by tenants. Those who take comfort from the fact that the tendency in this direction is slight must remember that it is steady, and that the number of tenanted farms has increased several hundred per cent in fifty years. Neither does it help the matter to say that most of the owners live nearby. While there are exceptions, the general effect of tenancy is detrimental to the development and progress of a neighborhood. Landlords and tenants look with different eyes at taxes, improvements, fertility, local institutions, etc., with the result that neighborhoods are apt to decline where tenancy is the general rule.

Bad Weeds Increasing

BECAUSE some farmers insist upon buying mixed grass seeds of uncertain quality for the reason that they are cheaper, certain weeds are becoming a menace in some sections. The four kinds most commonly seen in large numbers are, winter cress, pepper grass, wild mustard and wild carrot. Dr. E. M. Gress, State Botanist, says that most of these have been introduced by sowing unclean seed. Pennsylvania has one of the best seed laws in the country and the seed sold within the state is inspected, but the law does not reach the mail order trade.

One-Eyed Motors Dangerous

THE Keystone Automobile Club calls attention to the menace the one-light motor operator is to the traveling public. Altho it is against the law to drive a car with only one headlight burning, there are those who will go on the highways at night with but one light. The conditions are frequently such that it is impossible to tell which one is lit as the one-eyed monster approaches and the law-abiding driver may have a collision, or be forced off the road. The plea usually made by the driver of such a car is that he did not know it had gone out. Nine times in ten that is not true. If the traveling public will take this matter up in earnest and make prompt information against drivers of one-lamp cars the menace to travel can be reduced.

Horse and Mule Shortage Soon

THIS country will wake up some morning during the next five years and find itself short of enough horses and mules to do the necessary work, unless there is an immediate resumption of breeding. No matter how extensively motor power may be adopted there will always be a need for animal power. It is a mistake to reason that the present rapid development of mechanical power machines will speedily eliminate horse-power altogether, and that the breeding of horses and mules should be stopped.

Estimates made by the Department of Agriculture show that there has been a decline of seventeen per cent in the work stock population since 1920. The decline in Pennsylvania is twenty-four per cent and at the present rate this will be increased to thirty or forty per cent in the next five years unless breeding is resumed.

Good horses in all classes and good mules still bring good prices, and those who contemplate breeding should remember that high-class animals are wanted all the time at paying prices. Of course, it never has and never will pay to produce inferior animals.

Tax Reduction Talk

THE politically-minded press has a great deal to say about the beneficial effects of past and prospective tax reduction. They "point with pride," and prophesy with hope concerning the subject, but all the while the common man's taxes keep mounting higher and higher. We have no wish to argue for the keeping up of federal taxes beyond the needs of the government, but we are not going to get excited over any real or fancied tax reductions until they are reduced where the common man can feel it. The practice of relieving corporate property from paying local taxes is a most unfair arrangement. Local governments and local institutions are as vital to the welfare of corporate interests as they are to local residents and all should be taxed alike to maintain and improve them. The costs of maintaining state and federal governments are small in comparison to the costs of local government in these days, and the old arrangement for putting the burden of the former upon rich men while the latter are met by the local residents may have been a smart deal but it is a most unfair one.

New Jersey Field Day

THE forces of nature conspired to make Field Day at the New Jersey Experiment Station one of the best and most largely attended in recent years. The heavy rain the day before, followed by beautifully clear weather, made the fifteenth ideal for a trip to the Station. The experiments and demonstrations were viewed with eagerness and profit. The small tractor demonstration was a popular feature, while the poultrymen of the state were interested in the experiment of rearing and keeping chickens in close and perpetual confinement. This experiment is being undertaken to find, if possible, some way of overcoming the menace of the intestinal worm which is now threatening the poultry industry. The horticulturists, the women, the boys and girls, and the dairymen all found enough to make them feel that the day was well spent.

International Company Absolved

THE long litigation between the Government and the International Harvester Company for alleged violation of the anti-trust law was ended recently in the Supreme Court when the court rendered a decision in favor of the company. The suit was begun in 1912. In 1918 it was decreed that the Company should not have more than one dealer in harvesting machinery in any city or town. This, the Supreme Court finds, had been strictly adhered to by the Company, altho the "provision constituted a drastic limitation on its methods of distribution to which none of its competitors have been subjected."

It is interesting to note that the Supreme Court in this decision reaffirms its declarations made in a previous case that "the mere size of a corporation, however impressive, does not, when unaccompanied by unlawful conduct, constitute an offense against the laws of the United States."

Training Young Leaders

IT MAY be true that leaders are born, not made. The fact remains, however, that leaders need training. Instances could be cited in many rural communities where untrained leadership has been almost as bad as none at all.

One of the most important forward-looking movements in Pennsylvania agriculture is the training in leadership being given farm boys and girls thru the 4-H Clubs. Topping off the work of the clubs is the Second Annual Leadership Training School, now being held in connection with Young Farmers' Week at State College.

It is to be deplored that our schools and colleges don't follow the example of Pennsylvania's club leaders by giving more sound training in leadership, in the place of time-wasting non-essentials.

Mr. Goodling Makes Good

THOSE who have visited State College during the past seventeen years have without doubt met the Farm Manager, the big, genial C. L. Goodling. His success in handling the 1300 acres in the college farms has been rewarded by his being chosen Director of the National Farm School situated in Bucks County, near Doylestown. The primary purpose of this school is to teach practical farming to city boys, altho admission may be granted to boys from the country as well. Mr. Goodling was chosen because of his experience in directing large farming operations. This ability will find exercise in overseeing and managing the students at the National Farm School, since they are required to do the actual work on the several hundred acres connected with the school.

Editorial Sidelights

ONE DAY many months ago we were startled to find in one of the old magazines of the so-called quality group an article bearing this heading: THE BEE'S KNEES. To think that this conservative magazine should stoop to the anatomical school of slang!

But upon reading the article we found nothing slangy about it. There was no reference to the feline's pajamas nor to the reptile's hips. It was a most informative article about the knees of the bee,—their marvelous structure, the way they are adapted, like pairs of specialized tools, to the various needs of their owner.

Of all of which we are reminded by Doctor Gress's article on Page 3 in which he brings out the close relationship between cats and bees and the clover crop.

SOIL CONGRESS MEETS

Delegates from Thirty Countries Hear Coolidge at First Session—Corn Crop Compared With Argentina.

Washington, D. C.

SCIENCE is not confined within any natural boundaries. Its achievements and its benefits, like the achievements and benefits of all truth, are at the service of the world for the lightening of human labor and the enrichment of human life. With this thought as the keynote of his address, President Coolidge welcomed the 400 or more delegates to the first International Congress of Soil Science at its opening session in Washington.

Thirty Countries Represented

In attendance at this conference are the world's foremost soil chemists and geologists, who represent an international movement for the solution of the problems of soil conservation and crop productivity. Upwards of 150 delegates from 30 foreign countries participated in the proceedings, in addition to more than 200 American delegates. Each delegation brought exhibits of types of native soil, which, including the exhibit by the United States Bureau of Soils, made a large display of special interest to soil specialists and students. The Russian delegates brought with them two carloads of soil specimens. The value of this exhibit, which will be left in Washington, is estimated at more than $50,000. The papers and discussion were mostly of a highly technical nature.

From the President's Address

In the course of his address President Coolidge said that "with practically all our fertile land now under cultivation, except for irrigation and reclamation, further increases in total production must come from increased acre yields instead of from increased acreage.

"Recognizing the fundamental importance of agriculture to the welfare and happiness of all citizens, the United States government long ago adopted the policy of federal aid and support for agricultural education and research." In reviewing the development of the land-grant colleges and experiment stations, President Coolidge said that the personnel of the state experiment stations, together with the research staff of the Federal Department of Agriculture, constitutes the largest organized body of research workers in agriculture in the world.

What Does It Cost?

The Tariff Commission has been requested to investigate costs of producing corn in this country and Argentina, the principal exporting country. It is expected that an investigation will be undertaken early in the fall. The corn crop in Argentina is reported to be a large one, and the Corn Belt farmers feel that they should have whatever protection an increase in the tariff rate on corn can give them.

Organization Is the Key

If farmers in the United States would become as strongly organized as they are in other countries, they could obtain a fairer opportunity all along the line, including farm relief legislation and the obtaining of better prices for the products they market from their farms, said Representative Swank, of Oklahoma, who has returned from a study of the farm problems and systems of marketing in Denmark, England and Germany.

Engineers' Study Under Way

The nation-wide reclamation movement promoted by the Bureau of Reclamation is now under way. Reclamation engineers employed by the bureau have returned from an extended investigation of proposed swampland drainage projects in several southern states, and it is expected that a report will be made soon on the feasibility of reclaiming large areas of swampland and cut-over lands. This movement has the backing of the Reclamation Bureau, the railroads, local chambers of commerce and real estate promoters, and is meeting considerable opposition from the farmers who feel that they have enough competition now, without the government developing any more ready-made farms. —E. E. R.

ROAD WORK BEGUN

Extensive Highway Improvement Program Being Started—Jap Beetle Quarantine Now in Effect.

Harrisburg, Pa.

STATE Highway Department officials have begun work on what may be the most extensive road improvement program of any year since the state began highway betterment. As the result of appropriations and the prospects of huge payments of motor license fees, more operations can be undertaken and in addition to the contracts for building state officers are getting into touch with counties as to the projects they have in contemplation. So much work is in sight that contracting firms are sending people to Harrisburg to study the big list to be bid upon this month. A number of counties have already sent word of intention to match state allotments and local roads will come in for improvements to a great extent.

Refuse Electric Charters

Indications that the incorporation of electric companies by this state may be diminished are to be seen in the refusal of charters to a number of concerns projected for northeastern Pennsylvania and the holding up of others for study. The number of electric companies chartered this year has increased over last year, but there are many which have not been acted upon. The committee in charge of rural electric matters has been arranging for close observation of conditions in several sections where service has been asked.

Borer Campaign Closes

State inspectors and others in charge of the corn borer campaign have about finished their inspections of properties where corn was raised last year and the distribution of funds for cleaning up has been put under way. This covers the additional charges for labor. In some of the northwestern counties there will be liberal allowances.

Must Clean Plates

State Highway authorities have awakened many owners of trucks and other motor vehicles as to the importance of clean license plates the last few weeks, and the cars reported as running with tags not easily read because of dirt and also those improperly displayed have not all been in cities and towns.

May Harvest on Time

Wheat fields in some of the southern central counties where the grain is extensively grown are taking on customary appearance in spite of weather conditions and the harvest may be on time. In quite a few townships wheat harvest has come about July 4 and the men are getting ready, altho there is still some time to go. In the northern counties the wheat may be late. Corn is away behind generally.

Beetle War Starts

The State Bureau of Plant Industry has announced the Japanese beetle quarantine will be made as effective as twenty-four-hour inspection a day can make it. The road men have been mobilized altho the weather has made the beetle late. Seven new district offices have been opened and the roads have been marked. Cooperation of local markets has been obtained in several places.—T. C.

EXPECT HUGE CROWD

Federation-Grange Picnic will Draw Farmers From All Parts of State—Cranberries Hit by Frost.

Trenton, N. J.

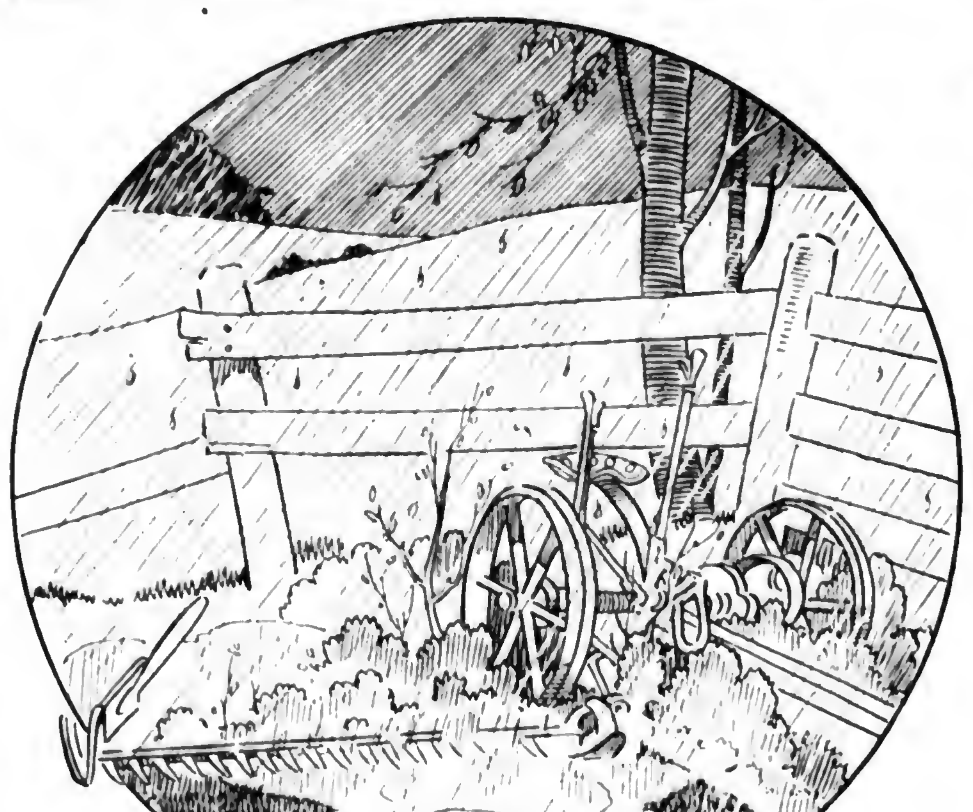
THE New Jersey Federation-New Jersey State Grange state-wide farmers' picnic promises to be the biggest outdoor gathering of farmers this summer. County groups will assemble at local points early in the morning of July 29 and proceed to High Point Park in Sussex County for a speaking and holiday program. Two national speakers, following usual addresses of welcome, are now being scheduled. The Sussex County Board of Agriculture and Pomona Grange are to furnish music and coffee.

The feature event of the holiday is the second state-wide horseshoe pitching contest, for which prizes aggregating $160 are offered. Arrangements have been made with hotels in Sussex and Franklinville by which the farmers may secure reasonable accommodations for over night.

Jersey Cranberries Damaged

Frosts in New Jersey cranberry bogs, since the water was drained off in mid-May, have caused serious damage, according to a recent survey made by the New Jersey unit of the American Cranberry Growers' Association. It appears that Burlington and Ocean Counties have not been as hard hit as other sections of the state. The big growers in this central part of the cranberry area were able to avoid serious trouble by using special equipment for re-flooding. The water is usually drawn from the bogs about May 10 but it was held even later this season due to the delayed arrival of spring weather, but even at that protection against frosts was not sufficient.

FARM TRAGEDIES NO. 2



ANOTHER ORPHAN OF THE STORM
LEET

Poultrymen Visit Demonstrations

Somerset County poultrymen on June 21 were scheduled to visit several of the larger poultry farms to study the rearing of young chicks; a tour under the auspices of the County Board of Agriculture with the State College cooperating. Free demonstrations in the rearing of young chicks in confinement are being conducted in the county.

Each of the poultrymen cooperating is trying the new method of raising a part of his young stock entirely indoors, never allowing it range. The methods are being thoroly explained on the tour. The county agent's office reports that more poultrymen are keeping economic management records and calendar flock records than ever before.

Testing Association Meets

The annual meeting of the Salem-Cumberland-Gloucester Cow Testing Association, held at Daretown last week, brought out a large crowd of dairy enthusiasts. The meeting was addressed by Professor E. J. Perry, of the New Jersey Experiment Station, and reviewed the cow testing work of the last season. All dairymen of the three counties were invited to attend the meeting, whether members or not.—W. H. B.

WILL STUDY RELIEF

Poultry Judging School Turns Attention to Poor Returns—Experts Urge Culling of Non-Producers.

Ithaca, N. Y.

THE low price of eggs and the high price of feed, with the great increase in the number of poultry farms and poultry farmers, is causing concern in this state. The State College will hold its tenth annual school for poultry judging June 27 to July 2 and will give attention to methods of relief from poor returns. Rigid culling of poor producers and the selection of the best producers for breeding will be stressed. The most expert poultry judges in the United States and Canada will give their advice and experience. About 110 people attended the school last year, most of them commercial poultrymen.

More Poultry Judges Needed

The poultry department of the State College of Agriculture reports a rapidly increasing demand for persons qualified to judge poultry for production or exhibition value, and for men trained to give demonstrations in judging as a part of extension instruction in this college and in many agricultural schools and other colleges.

It Pays to Cull Boarders

With the cost of feeding a hen running around 20 to 30 cents a month it is of interest to know that the cost of culling by trained poultry judges is but 6 cents a bird. Last year a total of 252,000 birds was handled, a small part of the whole number of hens kept in the state. It is believed that 25 per cent of the poultry on the farms does not pay its way.

Fruit Promises Poor Yield

Following the unusually heavy fruit crop of last year, apples have bloomed scantily in many sections and early spraying was handicapped by the weather. Cherries will be a light crop and grapes much lighter than last year.—M. G. F.

the Weekly Suggestion

to make your farm more PROFITABLE and more LIVABLE!

The object of these "Farm Service" Hardware Store weekly announcements is to tell you how the hardware store can benefit you, to tell about the numerous handy, time-saving devices that will lighten your labors, the countless mechanical conveniences to help you keep warm or cool, to give light, air, water as you want it and in the best way. The local Hardware Man is your local neighbor, he lives and prospers just as you do. He suffers from bad seasons along with you and enjoys the benefits of a good season in just the same way. He makes a big investment in slow-moving merchandise, such as emergency repair parts that are rarely needed, and in staple goods that carry almost no profit, and he stays open every day to supply your needs. Therefore you should trade with him as much as possible. Buy your kitchen equipment, your harness, stoves, paints, your heating and plumbing supplies, your roofing, fencing, and other things at a "Farm Service" Hardware Store. The more you buy from him, the better service you will get; because of the larger assortment he can afford to carry.

Each week in this paper your "Farm Service" Hardware Man is going to make suggestions of seasonable goods on which there may often be special prices, as well as suggestions for new ways to do everyday jobs. Read these messages each week and take advantage of the genuine service of a "Farm Service" Hardware Store.

Find the store that displays this tag!

NESHAMINY GARDENS

WHERE AN EDITOR WORKS AND THINKS

BY R. P. KESTER

GOOD old summertime has come at last. One week of really warm weather with enough moisture has started things a-jumping, and has done much to make up for the previous slow season, except in the matter of corn. Corn will have to take some long, rapid strides if it is to reach the poetic stage of "knee high by the Fourth of July." In spite of the seeming unfavorable weather we have had some things earlier than we ever have had them before,—asparagus, spinach, radishes, strawberries and peas.

◆ ◆ ◆

THE muskmelons (cantaloupes) did in eight days this year what required over three weeks last year, viz., get thru the ground. But several conditions were different. In the first place, we did not put a forkful of manure at the bottom of the hill this year. We find this tends to cut off the capillary movement of moisture in dry weather. Secondly, we had a nice rain just after they were planted, and thirdly, the days following were very warm. Just before the plants came thru the hills were sprinkled with hydrated lime. This not only provides the necessary sweetness of soil, but also prevents the formation of a crust which sometimes makes it difficult for the tender plants to get thru.

◆ ◆ ◆

THE writing of these notes has been interrupted and made difficult today by the look-out which is being kept inside and outside the office for the appearance of Lindbergh and the attendant fleet as they go from Washington to New York. A little after eleven A. M., they appeared and winged their way onward. Philadelphia feels somewhat slighted at not being given a chance to vent its enthusiasm, but the people did the best they could at honoring the world's latest hero by gazing, cheering and the blowing of whistles.

◆ ◆ ◆

THERE is something about the meteoric appearance of Colonel Lindbergh into prominence that gets under the skin of even sober-minded people. No man or woman ever before reached the heights of popularity, even in a lifetime, that he has attained in three weeks. And what is the cause of the wild enthusiasm? Partly because he made a successful, non-stop trip from New York to Paris in an airplane alone. That is an unprecedented feat. But he did more than that. He flew from comparative obscurity to the top of the world AND KEPT HIS HEAD. So far, the praise and notoriety that has been showered upon him by kings, princes and common people has not made him dizzy. By the rules laid down in Kipling's "If" he has proven himself a man.

◆ ◆ ◆

BUT to come down to earth. The yield of strawberries on our old setting is almost phenomenal. Nothing was done towards cleaning up the patch after the crop was gathered last year, because the continued rains made it impossible. Weeds grew so fast and so big that we decided it was not worth while. But the weeds were all annuals and died down. New plants grew this spring and set a good crop of fine berries. We find the varieties,—Aroma, Big Joe and Premier,—very satisfactory as to size, yield and quality. We shall plant these kinds next year. Strawberries are the most finicky of fruits as to soil types, and when one has found successful varieties it is best to stick to them until better are found.

◆ ◆ ◆

THE Laxtonian peas are the best dwarf variety we have ever found. We had the first peas to eat this year on June 13, which, because of the season, is a record for us. The vines are loaded with pods, and what is better, they are filled with peas. One trouble with the Gradus, aside from the height, is that the pods are often only partially filled. The Little Marvel is also good in every way, but has a smaller pod. We discontinued planting the little, smooth Alaska pea some time ago.

The Cheerful Plowman

Guessing Their Weight

EACH one of my neighbors has hobbies, I 'spose, and I have my hobbies as everyone knows, but Neighbor DeKorum spends half of his days in very unwise and unprofitable ways! He has a queer habit of arguing "horse," or guessing the age, and the breed, and the force, and of guessing the weight of each nag that he sees; tho he's usually right, yet he seldom agrees! My Neighbor DeKrimpun, and Neighbor DeWise, have habits the same and of similar size, and when those three fellows convene in a place, then time is forgotten, forgotten is space!

They argue and argue: DeKorum will say, "Twelve hundred is all Whipple's dapple will weigh!" "Twelve hundred, your grannie!" DeKrimpun will shout, "your guesser is crooked, I haven't a doubt! That dapple is blocky, and chunky, and square; she's pretty blamed solid, she's some little mare; she'll weigh thirteen hundred, I'm sure that she will! She'll weigh thirteen hundred, I'll leave it to Bill!"

"You'll leave to me, sir?" DeWise will remark, "I'd put her twelve-fifty as quick as a lark. She's blocky, and chunky, and all that you say, but not so blamed chunky as Netherby's gray! The gray, I would reckon, right off of the bat, weighs more than twelve hundred when rested and fat!"

Thus endless they argue with time on the wing, accomplishing nothing, no never a thing! Now, I love my horses, I think they are great, but spend no time foolishly guessing their weight! We all have our hobbies, but why, may I say, do so many men waste their minutes that way?—Just sitting around—it's a hobby, of course—eternally talking this subject of "horse"?—J. Edw. Tufft.

HAY BALER

Make More Money

You can make good money baling hay and straw. The FARQUHAR Peerless Baler does a nice, clean job of baling. Puts up straight, attractive bales.

Solid steel saddle holds main bearings in proper alignment. Baler is simple, strong, dependable, easily operated and has large capacity. A big money maker.

Friendly Talks

By EDGAR L. VINCENT

WE WERE raising a big barn. The frame was made largely of hard wood timber and was heavy. We had invited our neighbors from far and near, because we knew it would be no slight job to lift the bents to their place.

The first bent proved almost too much for our men. The boss carpenter shouted himself hoarse with his "He' o He'," and still the timbers scarcely moved. It was a critical moment. Would the bent have to come back and the barn wait for more men? All at once a little boy darted into the line and grasped the pike held in the hands of one of the men.

"I'll help you!" he called like the brave little man he was, and up he tugged with all his might and main. Whether the few pounds the little chap could lift was the cause of it, or whether the sight of the wee lad and the sound of his cheery voice did it, the great timbers slowly went above the "dead center" and soon began to rise to an upright position.

Is Your View of Life Distorted?

Helped out of a hard place by a little fellow scarcely ten years of age! Times come when it seems to us things are moving slowly in this old world of ours. "Things are going backward," so we say. "They were better when we were young!" and we take gloomy views of life. Well, it may be doubted whether this is true or not. I have known men to be mistaken about matters of far more importance. The glasses we wear may have something to do with our view of life.

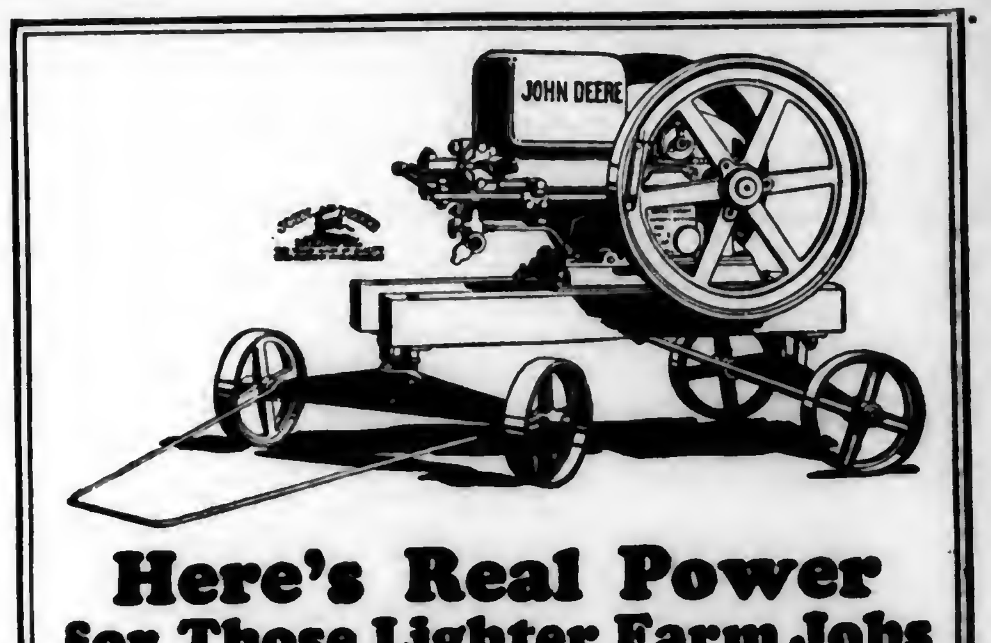
But one thing is certain. If things are bad and growing worse, it is time for us all to take our places and lift every pound we can.

Just how it is we may not be able to explain, but there is an inspiration in the good example of one man, even tho that man may feel that he is pretty small in the sum total of mankind and in his own eyes of little consequence, morally, mentally or physically. The fact that such a man has his shoulder down under the big beam and is putting the best there is in him into trying to lift the load is enough to put heart and courage and power into others who may be unable to move forward a single inch.

Every Good Deed Rewards Itself

"That may be so, with other folks, but I can't do anything. Better men than I have tried and failed." But have you tried? Have you done your very best? Leave out of the question what the other fellow has or has not been able to accomplish. The great thing with you and me, is, "Have I done my best?"

It is the faith of all Christian people that sometime there will be a day of reckoning. But whether such a day of reckoning comes in the far-off future or not, it is a fact that here and now, today and every day, we receive great rewards for every effort we put forth in behalf of others. When the barn frame stands still at the raising for lack of a few more pounds of strength on the pikestaff, and we come to the front with that little more of power, we do not have to wait for our reward until the judgment day. We get it right here and now. Men thank us, and the words linger in our memories; but the finest return is the consciousness we have in our own hearts that we have done our best when the pinch was hardest. And we may all know the joy of that consciousness.



Here's Real Power for Those Lighter Farm Jobs

Think of the time and labor it would save if you had this dependable, tireless mechanical hired hand to pump your water, run the washer, the churn, separate cream, turn the grindstone, grind feed, shell corn plus the many other jobs you will find for it.

When the John Deere Type E engine, the enclosed engine that oils itself, goes to work on the farm it means freedom for you and other members of your family from many of those tedious, time-taking jobs.

It is ready for duty day or night, week day or Sunday and the low cost of running it will surprise you.

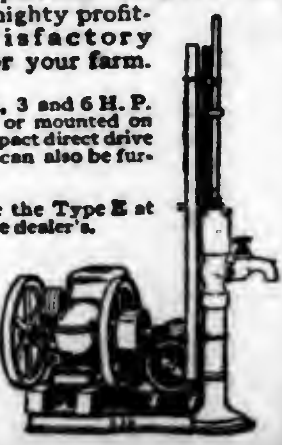
Don't confuse the John Deere with the ordinary farm engine. All of the working parts on the Type E are fully enclosed and operate in a bath of oil—no grease cups or sight-feed oilers to fill and watch—runs without one minute's attention until the fuel is exhausted.

Free Booklet Tells All About It
Write John Deere, Moline, Illinois, and ask for Booklet WT-638

This advanced construction results in more years of service, lower upkeep costs, more power and convenience of operation—makes the John Deere mighty profitable and satisfactory equipment for your farm.

Built in 1-1/2, 3 and 6 H. P. sizes—on skids or mounted on wheels. A compact direct drive pumping outfit can also be furnished.

Be sure to see the Type E at your John Deere dealer's.



Let the John Deere Direct Drive Pumping Outfit Solve Your Water Pumping Problem

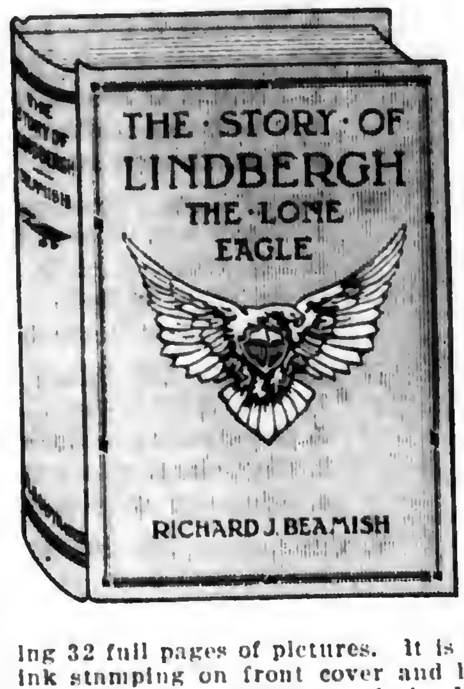
From the Plow to the Plane

Another farm bred boy gains eminence



THE STORY OF LINDBERGH THE LONE EAGLE
RICHARD J. BEAMISH

You will want to read the story of the "Flying Fool," who was far wiser than his critics knew. His non-stop flight from New York to Paris has enrolled his name among the immortals.

The story of Lindbergh, together with the development of aviation, epoch-making flights, and historic efforts to bridge the distance between the Old and New Worlds, is more thrilling than fiction and every word true.

The complete book measures 6 x 8½ inches and comprises approximately 300 pages, including 32 full pages of pictures. It is bound in rich cloth, with gold and ink stamping on front cover and back. It is written by Richard J. Beamish, whose "History of the World War" had the largest sale, within a given time, of any book ever published.

How to Secure One Free

Send us three yearly subscriptions to Pennsylvania Farmer at 50 cents each—your own renewal will count as one—and we will forward the book to your address postage prepaid. The book will not be given with your own subscription alone. Two other subscriptions must accompany your order.

PENNSYLVANIA FARMER,
261 South Third Street, Philadelphia, Pa.

Who Will Be the Master Farmers?

Readers Are Asked to Name the Outstanding Farmers of the Eastern States

WHO are the really successful farmers in Pennsylvania Farmer territory? Who are the men whose standing in their own home and community qualifies them to be pointed out as worthy of emulation by the younger generation?

We know that there are many really great farmers in Pennsylvania, New Jersey, Delaware and Maryland. They aren't called great by their neighbors; they are known simply as good farmers, good fathers and good citizens. Nevertheless, if they have attained a high standard of achievement in all the major branches of their life work they deserve to be called great.

Pennsylvania Farmer wants to honor the great farmers in its field by conferring upon some of them the degree of Master Farmer and awarding them a gold medal in recognition of what they are and what they have accomplished.

The editors are depending upon readers to help select the men on whom this honor will be conferred. If you have a neighbor or acquaintance who deserves recognition for what he has accomplished as a farmer and a citizen, please give us his name and some information about him by filling out the Score Card on this page and sending it to the Master Farmer Editor, PENNSYLVANIA FARMER, Philadelphia.

Any real farmer living in Pennsylvania, New Jersey, Delaware or Maryland is eligible for the award.

Any qualified farmer for whom the score card on this page is filled out and sent in will be considered a candidate for the award.

Score cards may be sent in by neighbors of the candidate, or by county agents, extension specialists, fellow Grange members, or anyone who knows him well enough to fill out the card with a fair degree of accuracy.

All candidates later will be scored independently by members of the PENNSYLVANIA FARMER staff or their representatives, and final selection of the twelve farmers to receive the award will be made by the Board of Judges.

All personal information appearing on the score card or secured by the editors or judges will be kept confidential, except with the consent of the candidate.

The degree of Master Farmer will be conferred and the medals will be awarded at a public meeting to be held in Harrisburg during the Pennsylvania State Farm Products Show next January.

Please make your nomination by filling out the score card for your candidate and mailing it not later than July 15 to the MASTER FARMER EDITOR, PENNSYLVANIA FARMER, 261 South Third Street, Philadelphia.

Extra score cards and directions for scoring may be obtained from the Master Farmer Editor.

The following suggestions will be helpful in filling out the Score Card for your candidate:

I. Operation of Farm—A Total of 290 Points.

1. Maintenance of Soil Fertility—60 Points.

Drainage—On soils that lack natural drainage, suitable ditches or tile drainage systems should be provided. Where drains have not been provided on such land, deduct up to 10 points.

Manure—If all manure is carefully saved and is hauled to the field with the least possible loss, make no deductions under this head. If manure is located so as to leach badly, deduct 15 points. If half or more of the manure is left in yards or piles, during the summer, deduct 8 points; other cuts in proportion.

Lime—If soil is too acid to secure a good stand of legumes three years out of four, deduct 15 points where no lime has been applied. If applied in adequate amounts make no deductions. If less than this amount, cut in proportion.

Legumes Plowed Under—If most of the plowed fields are devoted to cash crops, at least one-fourth of the cultivated acreage should be in legumes each year, and at least half of this legume acreage should be plowed under. If this is done, make no deduction under this head. If no legumes are plowed under on a farm where cash crops are extensively grown, deduct 15 points; if less than one-eighth of the total crop land produces a legume for plowing under, make deductions accordingly.

Commercial Fertilizers—If used in sufficient quantity with barnyard or green manure to replace plant food removed by crops, make no deduction; if not, deduct accordingly up to 15 points. If other methods of maintaining fertility are followed, disregard this point.

2. Crop Rotation—25 Points.

A good crop rotation should keep at least 25 per cent of the cultivated acreage in legumes. Deduct 1 point for each 1 per cent in which the rotation falls short of this.

The crop rotation should include a maximum of the most profitable cash crop, or on a livestock farm a maximum of feed most needed. The crop rotation should also provide for the distribution of labor. Cuts should be made in proportion as it falls short in these respects.

3. Seed Used—25 Points.

If home-grown seed has not been carefully selected and stored, deduct 10 points. If seed has not been tested, deduct 5 points. If seed has not been treated for the control of disease, deduct 5 points. If seed of mixed, unknown or unadapted varieties is used, deduct 5 points.

4. Quality of Livestock—35 Points.

If all sires are purebred, and all females productive and high-grade, make no deduction. If all females are purebred, add 10 points to the total score. Deduct 10 points for each grade or scrub sire in use.

Alternative

Fruit and truck growers will deduct if trees or garden crops are not of varieties most suitable for locality; if trees or seed and plants are not secured from reliable growers.

5. Feeding and Care of Livestock—30 Points.

On a dairy or beef farm, if no silage or legume hay or an insufficient quantity is produced and fed, deduct 10 points. Whatever the class of livestock, if grain is not properly supplemented with protein feeds (home-grown or purchased) deduct 10 points. If used in insufficient amount deduct in proportion. Livestock should be thrifty, healthy, productive and properly housed. If not, deduct accordingly.

Add 5 points to final score if sufficient alfalfa hay is produced for all livestock; add 5 points if cattle herd is U. S. accredited. Add 5 points if hogs are immunized against cholera; deduct 20 points if any contagious disease is present in the stock.

Alternate

Fruit and truck growers will deduct if trees or garden crops are not sprayed according to schedules recommended by the State Agricultural Experiment Station or other recognized authority; if general orchard or truck growing practices are below standard; if trees are not pruned regularly and properly; if weeds are not kept down; if insects or diseases are present.

6. Efficient Use of Man and Horse Labor—25 Points.

Work should be managed to keep labor and horses occupied with seasonable work. Deduct if winter hauling, machinery repairing, etc., are neglected and allowed to interfere with rush season work.

7. Adequate Tools, Machinery and Equipment Well Housed and Repaired—35 Points.

If the equipment is inadequate for the efficient handling of the farm work, is poorly housed, or in poor repair, deduct accordingly.

8. Convenience of Farm Arrangement—15 Points.

Where buildings are located in a manner that requires additional labor to perform work about them, deduct up to 8 points. If fields are not conveniently arranged as to shape and size, deduct up to 7 points.

9. Products of Farm—Yield and Quality—40 Points.

This paragraph covers all products sold off the farm. If the five-year crop average yields are twice the five-year average for the state, make no deduction. For yields below this standard deduct accordingly. The remaining twenty points are to be credited to quality of product. In this the scorer, or judges, will have to use their best judgment.

II. Business Methods and Ability—180 Points.

1. Relation of Income to Expenses—100 Points

If operating and living expenses (including interest and taxes) exceed income for an average of five years make full deduction. If income exceeds expenses, make no deduction except in the case of extravagant expenditures.

2. Accounting Methods—30 Points.

If a checking account is kept and all expenditures and receipts are properly recorded, give 15 points. If complete book account of income and expenses is kept and balanced at least once a year, give 30 points. If accounts are kept on a cost account basis give full score.

3. Business Reputation—50 Points.

If bills are promptly paid, and if reputation for honesty and square dealing is good, give full score; if not, deduct accordingly.

III. General Farm Appearance and Upkeep—90 Points.

1. Repair and Upkeep of Buildings—30 Points.

Buildings should be kept well-painted and in good repair; if they fall short, deduct accordingly.

2. Appearance of Yards—30 Points.

Lawns should be in good condition, and well mowed. Shrubbery and trees should be healthy and properly cared for. Yards should be neat and free from weeds and rubbish. If they lack in any of these matters, deductions should be made accordingly.

3. Condition of Fields—15 Points.

Fields should be neat, and free from noxious or unsightly weeds. If they fall short of this standard deduct accordingly.

4. Condition of Fences and Ditches—15 Points.

Deduct for broken or rotten fence posts, unstapled or broken wires, broken or missing gates, unsightly fence rows; and also for ditches that are not working properly or are clogged with rubbish or filled with weeds.

IV. Home Life—300 Points.

1. Convenient House—50 Points.

Do not score on size or cost of farm house, but only on its convenience and adaptability as a home. Deduct in proportion as it falls short of this.

2. Labor-Saving Equipment in the Home—75 Points.

If no water system is provided, deduct 20 points.

If no sewage disposal system has been installed deduct 15 points.

If no heating system other than a stove is in use, deduct 10 points.

If no lighting system other than kerosene lamps, deduct 10 points.

If no refrigerator or cooling system, deduct 10 points.

If no power washer deduct 10 points.

If any of these conveniences are insufficient or in poor repair deduct accordingly.

3. Character as a Husband and Father—100 Points

This must be necessarily a matter of judgment. A man who is kind to his wife, makes her tasks easy, gives her trips away from home, and sees that she is provided entertainment, who is also a companion to his children, taking an interest in their training, their recreation, and their problems, should receive a full score. Deduction should be made in proportion as he falls short of this standard.

4. Education and Training of Children—75 Points.

If children are kept in school thru eight grades, give 30 points. If sent thru high school give 40 points. If sent thru college give 50 points. If home is well supplied with good books and periodicals, add 15 points. If the children are helped and encouraged with their school work add 10 points.

V. Citizenship—140 Points.

1. Neighborliness—40 Points.

Do neighbors regard him as a good neighbor and a healthy friend? Is he cheerful and friendly, always ready to help where help is needed and always avoiding a quarrel with a neighbor? If so, give full score. If not, deduct in proportion as he falls short of this standard.

2. Interest in Schools and Churches—40 Points.

If he visits schools, or otherwise shows evidence of an active interest in school affairs, give 15 points.

If he attends church with reasonable regularity give 15 points.

If he is active in religious education work, give 10 points.

3. Interest in Other Community Enterprise—30 Points.

If not a member of farmers' organizations, deduct 15 points.

If an inactive member, deduct 5 points.

If known in the community as a chronic "knocker" on community enterprises, make full deduction.

4. Interest in Local and National Government—30 Points.

Deduct 15 points for failure to vote in either of last two elections, unless prevented by sickness or other unavoidable occurrence.

The Master Farmer Score Card

THIS score card will be used in selecting the 12 men on whom the degree of Master Farmer will be conferred by Pennsylvania Farmer. It also will be valuable in assisting farmers generally to measure their own accomplishments.

POULTRY

R. L. SCHARRING-HAUSEN
Staff Contributor and Adviser
Glenview Farm

More Than One Way to Catch a Thief

MOST suggestions on preventing the theft of poultry seem to favor the organization of poultrymen and farmers as about the only means of protection. The organization will be all right but there are a lot of things many poultry owners can do either in or out of a protective organization which will tend to reduce the stealing of poultry.

Poultrymen who furnish electric lights in their houses have a protection from thieves. When one press of the button can illuminate all the laying houses it is a great help in frightening away marauders. An additional light outside the houses to brighten up part of the range will also help. The long distance flashlights which will throw a narrow beam of light about 300 feet are of great help if it is necessary to locate a disturbance on the poultry range at night.

A good watchdog is of great importance on a poultry farm. Usually it pays to keep the dog in an open front colony house with a good view of the laying house. A small, warm kennel can be placed in one corner of the house. The dog is under control but is always there to bark.

Dogs and Padlocks Guard the Birds

More than one dog is frequently useful on a poultry farm. The dog fastened near the large poultry houses can sound the alarm and the house dog can be released for locating the trouble when it occurs. No poultryman gains by keeping a tramp dog. Such a dog may run with stray dogs and attack sheep and it is better to have hens stolen than be responsible for a neighbor losing a fine flock of sheep. In addition there are few poultrymen who have much egg money to spare for paying sheep losses.

The poultryman should own as many good padlocks as there are buildings containing birds. And lock every house at sundown. Open front windows should be protected by hardware cloth nailed on the inside. The fine mesh is hard to cut and helps to keep out thieves.

The frequent inventory of the flock is a help in keeping down poultry thieving. Know how many birds you own. Then if the flock is slowly dwindling it may be due to the type of thief that is picking off a few birds at a time. At the same time you may locate weasels, rats, skunks or hawks as the cause of the losses. Such thieves are easier to control than human thieves. At least you can fight them with more severe measures and less trouble.

In fact, I think a lot of the poultry thieving is done by pests like weasels. Some farmers never know how many chickens they have until fall when the birds go into winter quarters, then they count the flock and it is about fifty per cent short of their expectations. At once they broadcast that somebody stopped the other night and stole forty or fifty chickens. The loss did not occur in one night but was the result of continued depredations of pests over a period of many weeks.

Gun Used Only As the Last Resort

The use of set shot guns or bear traps is a dangerous plan and should not be followed. There is too much danger of causing injury where it is not intended. In any case the gun should be used only as a last resort.

If poultry are on a fenced range near a roadside the power of the fence can be increased with either two or three lines of barbed wire. Nail a little block on each post and place the two lines of barbed wire parallel to each other and about six inches apart and the fence is very difficult for a man to climb.

It pays to market all broiler cockerels as soon as they reach marketable weights. This cuts down the chances of losing them thru theft and reduces the size of the flock it is necessary to protect. It makes the inventory less difficult.

The State Police and other officers are a great deal of help to poultrymen but each individual poultry producer can do a lot to help himself and cooperate with the officers by giving the poultry as much protection as possible. This will increase the danger and the difficulty of stealing poultry. And when it is combined with stiff sentences for convicted thieves the business may be less attractive.—R. G. Kirby.

Tobacco Speeds Cure

Do chicks get worms and what kind? Have you had any experience with worms in chicks? Of course, most of us know of worms in older birds but I am referring to chicks.—W. A. B., York County, Pa.

Chicks certainly do get worms, both roundworms and tapeworms, and in some sections of New Jersey where the poultry industry is heavily concentrated cause a great deal of trouble in rearing the young stock. Young chicks are especially liable to infestation if they have been running over ground that has had chickens on it before, or are in contact with old stock. If you think that your chicks have worms it would pay you to slit a set of intestines and try to discover them, or send a specimen to the Poultry Department of Penn State at State College, Pa. Chicks that are eight weeks of age can be fed tobacco dust in the mash at the rate of two pounds per 100, feeding the mash with the dust three weeks, skipping the dust three weeks, and then using the dust three weeks again. For younger stock, halve the quantity. I think it a good plan to keep chicks in the brooder houses until they are a few weeks old, using a cod liver oil mash to keep them in health, as the confinement enables them to get a start in life without danger of infestation from worms and other ground-borne parasites.—R. L. Scharring-Hausen.

Rattling Bad Eggs

Is there any reason for eggs being rotten, except infertility? I set a hen on fifteen eggs from a chicken farm. Only hatched one chick and the other fourteen rattled. I think I would be justified in writing to the man from whom I got the eggs, but want this information first.—Mrs. D. A. M., Blair County, Pa.

Eggs that are infertile are not liable to decay easily, but eggs that are fertile in which the germ has died are the ones that become so decidedly rotten. I imagine that the eggs you had which failed to hatch contained weak germs that failed to develop. Perhaps if you write to the farm that supplied the eggs they will make some arrangement with you, as most poultry breeders are anxious to have satisfied customers.—R. L. Scharring-Hausen.

THE Hungry Rope

By Katherine Mayo

COPYRIGHT BY KATHERINE MAYO

Continued from last week

AT THE farmyard entrance he picked up the trail of the team, thence with his pocket flashlight tracing it back and back along the road. Clearly enough it stood out—the deep imprints of springing hoofs distinct among the marks of common traffic—for a full quarter-mile. Then it suddenly stopped.

"Look!" said the Sergeant to the recruit who accompanied him. "Right here's where they gave their first jump. Here's where the shot was fired. We'll search the sides of the road."

Carefully they hunted thru brush, briar and the deep, dry tangles of tall dead weeds and grass. The recruit made the first discovery.

"Here's a bucket," he announced—"an old brown bucket—and two doughnuts in it—one with a piece bitten out."

The Sergeant stood at his shoulder before he finished the phrase. "That bucket might have been here a month," said the Sergeant. "These doughnuts"—and he held his flashlight close—"could be a week old. But as for the bite—that's as fresh as paint. That was done within the last few hours."

Then again he turned his light upon the ground. "Here's where somebody's been sitting, this afternoon—bent grass, broken stalks—See 'em? And what's this?"

He was stooping over an old tree stump, first scrutinizing its surface, then feeling around it, then twitching gently at some object lodged beneath its spreading roots. With a last persuading tension he drew it forth.

"Hold the light, till we look," he commanded, straightening up, with the thing in his hands.

The recruit turned his lamp on the Sergeant's find—a crumpled piece of white cotton cloth. The Sergeant carefully smoothed it out. It was a sort of rude sack, and about the size of a meagre pillow-case. In one side four holes had been cut, like the holes in a Jack-o'-lantern face. The two ends were raw, and had been torn, not cut.

"This stuff is new," Sergeant Snyder pronounced. "It has never been washed. Moreover, it has been under that stump only a matter of a very few hours. Feel of it. It hasn't lost its stiffness yet. And see these loam-marks, where the outside creases came—how fresh and sharp-edged they are still. The man that had this mask bunched it up in his hands and rammed it under this stump no longer ago than Daniel Wagner's shooting. That rounds out his picture:

"He was sitting here hidden in the tall weeds, waiting; and eating doughnuts while he waited. In his pocket he had the mask. He dozed, maybe,—a darky always will doze, you know, on the slightest chance,—and waked up with a jerk at the sound of a team close on him. He lifts his head, sees only one man in the wagon, drops his precious, half-eaten doughnut back into the pail for safe-keeping, pulls on his mask, jumps out, and blazes away at poor Wagner.

"BUT he had forgotten the horses. The horses run, carrying Wagner, Wagner's purse,—if that was what was wanted,—and above all, the evidence of the crime.

"So the fellow knows it is only a question of hours, or less, when the chase will be on. He must make the most of the interval. He is scared—badly scared. He grabs off his mask, balls it up in his two hands, and, as he thinks, sticks it out of sight under this old stump.

"But he doesn't take time to make a good job of it. He knocks off a bit of loose bark in his haste—and leaves that mark, there, blazed on the stump, a tell-tale. Then he cuts and runs."

"Who was he?" the recruit baldly bleated.

"How should I know!" the Sergeant sadly replied. "But in the morning, my lad, you'll be out with the first crack of dawn. And you'll be looking for that big darky that collects guns."

Meantime, other wheels had been turning—wheels set in motion on the first alarm by the Sergeant's practiced touch. "C" Troop's resources, depleted tho they were, had all been sensitized to the need of the hour. And so it was that Private Buono, prospecting with purpose around the town of Pottsville, made a discovery.

THE discovery was that one Charles Wilson, colored, before the day of the State Police sentenced to nine years' imprisonment and to them unknown, had but just finished serving his full term; that Wilson was a very large man; and that his mother now lived in Pottsville. Upon this, having in view the stealer of rides, the collector of guns, Private Buono, in civilian clothes, had betaken himself at once to the house indicated.

There in her kitchen Private Buono sat talking with the negress, the convict's mother, gathering as he felt, some valuable points, when a slight change of expression seemed to flit across her face, and he thought she made a signal to someone behind him.

He swung around to look. No third person was in sight. But, "Ah reckon Ah'll be goin' now," called a big, half-laughing negro voice somewhere in the outer hall. And the street door slammed.

With a jump Private Buono followed. As he reached the street he saw the man whom he believed to have preceded him running ahead.

Private Buono pursued. The runner turned, levelled his revolver and fired a shot that whistled very close to the Trooper's ear.

It was dark now—after six o'clock—and the narrow streets and alleys of the quarter were pockets of night. Doubling in and out, the fugitive managed after a time to throw his pursuer off the track, until once more he betrayed himself, yielding to the temptation to fire again, from an alley mouth, as the Trooper ran past.

But, tho the range was close, the aim failed. Private Buono wheeled into the alley. The negro dashed out at the farther end, and, rapidly turning corners, again escaped from sight.

A swelling crowd of excited onlookers now complicated the situation—blocked the view.

"There! There he goes!" yelled a voice on the far outskirts.

"There!" shrieked others. "There he runs! There below!"

FOLLOWING their indication Trooper Buono clove his way thru the throng and plunged down the incline—the slope of the hill on which the town is built. At the bottom the fugitive stood as if waiting, gun in hand. As the officer neared he fired again, then sprang over the fence and dived into an old cemetery where, hidden and lost among tombs and the far-extended planting about them, he passed beyond any one man's powers of discovery.

Hot over his failure Private Buono still had no need to stop to think. Help he must have. Useless to report to Barracks, for, as he well knew, not another man could be drawn from that source. So he must ask for the town police.

His call came in to City Hall just as the night men filed in for duty. The night men were seven.

"Jump onto this job, every last soul of you," Chief Hoepstine commanded. "Take the first motor you find in the street and light out!"

They lit out. At the door they found not only a motor, but a motor with a driver ready and eager for the chase. It was only a four-passenger car, to be sure, but with two standing on either running-board, it served as well as a bus. Thru the thickly crowded main thorofare they drove with care. But they whipped into the first available side street, speeding apace, and when they came to their proper corner, had, in their enthusiasm, attained such headway that they could not make the turn.

The car skidded, crashed into a tree. Its occupants shot hither and yon. And the first of that crowd that rushed to the scene found eight dazed men, sitting or lying about the roadbed, all somewhat injured, two badly hurt.

FOR a time the calamity befallen the guardians of the town consumed the town's attention. But by half after seven o'clock the prior interest again prevailed, and City Hall overflowed with citizens offering themselves and their vehicles for the hunt.

Trooper Buono sped in the first car. Railway police officers cast themselves into those that followed. During half an hour the town of Pottsville threw off motors into the night as a pin-wheel throws off sparks. For general belief now held that the fugitive negro and Daniel Wagner's assassin were one, and not a man in the county could give a thought to other concerns while that assassin remained at large.

Flying in every direction, singly or in pairs, the cars covered the territory immediately outlying the town. Every house, barn, or saloon that conceivably might shelter the negro, was searched, every passer on the road was questioned, every patch of woods and brush was combed, the brickyard, with all its ovens and drying-houses, was ransacked. Wild rumors fluttered down out of the skies, and, as each alighted, a car darted out in whatever direction that rumor pointed.

But at three o'clock in the morning, when the searchers foregathered at City Hall, not one had a ray of news to offer, and by common consent the entire company went home to bed.

At dawn—the dawn of Wednesday, November 1—First Sergeant Snyder put his every available man on the job, the citizens helping with a will. All negro and foreign settlements in every town in the county were searched, the mountains hunted over, and each report of the presence of an unknown black, whence-ever it came, sifted to a conclusion. By means of track-walkers, switchmen, station agents and train-hands, the two railroads had been turned into mantraps on the first alarm. But still another day ran on—another night dragged thru its hours, without result.

On Thursday popular excitement and the popular activity remained at fever pitch. North, east and south there was mounting and riding over the hills. South, east and north, sped false alarms.

BUT well on into Thursday afternoon came at last a word that rang with a new sound. It rose from out of the west, and if there yet remained an able-bodied man who had not joined the chase, he joined it now.

Then First Sergeant Snyder, wise in times and seasons, feeling that the hour was nigh, quietly laid aside another and most vital work, and took the open road.

The hunt burst into western Schuylkill with a rush. The trail grew hot and hotter, and yet again and again disappointment dashed sure hope. By nine o'clock on this, the third night of pursuit, most of the chase, tired out and discouraged, had once more turned back toward home. And then it was, and not till then, that Sergeant Snyder got his real news.

He was scouting about the little town of Donaldson when it came, borne by a breathless messenger.

"They've caught him! Over in Tremont! Shut him up in a swamp! Some hunters beyond the creek saw a light in a cabin where nobody lives. They guessed it might be the nigger, so they went and told the man that owns the shack. He told the Chief Burgess and everybody else they met. The Chief Burgess turned out, and the whole town after him. When they got to the cabin—cabin's on the creek-bank—Burgess threw his car headlights square on it. Then the nigger runs out of the door and jumps over the bank—must be eighteen feet high—into the creek below. From there he cuts into the swamp, and now the crowd is surrounding the swamp, shooting."

SERGEANT Snyder covered the distance between Donaldson and Tremont at a speed that the emergency condoned. With his mind's eye he saw the embattled farmers falling in windrows, dropped by the cross-fire of their own guns. Was it in the power of engines to rush him there in time?

As his car dashed into the scene the visible gravity of the situation confirmed his thought. Two hundred men and more, armed with shotguns and rifles and pitchforks, had encircled the swamp. The headlights of several cars, placed at intervals, struck sharp rays into its murky depths, exaggerating every little flicker across the shadowy planes.

Crack! went a rifle, off to the left. The Sergeant almost winced, in anticipation of a cry of pain from some wounded man. Even if they did not slaughter each other, they were tempting the madness of their quarry. Whatever creature they held penned among them was a creature fighting for his life.

Now, First Sergeant Walter Snyder, like every other officer of the Force, sees his own relation to given crises purely from the Force's standpoint; which standpoint, in the matter of personal danger, hurt and cost, even to cost of life itself, affords no view at all.

So, very promptly, he requested the Burgess to call off his men.

"But—we've come out to get the hound!" protested the Burgess hotly.

"You have got him, Burgess. You've held him. Now I'll just go fetch him out for you, that's all."

"You mean you'll go in there?"

"As soon as you draw off your men. It's the only thing to do."

"But—"

"DON'T you see, Burgess, how nervous they are? Firing like this . . ."

Crack! Crack! Crack!—a little tempest of hysterical shots broke loose even as he spoke.

"Cross-firing like this, it's the Lord's mercy they haven't killed each other already, filling the woods with lead."

The Burgess, moved against his will, sent the message around the line. Growling resentfully, the farmers fell back.

"Put them way off—way off. Tell 'em to close up the escapes," the Sergeant advised.

But while he so both advised and exacted, his deepest motive lay hid in his own breast.

He watched them fall back, back, spreading farther apart. Quickly then he turned to the Trooper attending him:

"See that they stay there. Don't let them get to shooting again. Head the car for the home road. Keep them as far away from it as you can, and stand by."

Then he waded into the swamp.

What of Our Farm Boys and Girls?

(Continued from last week)

IN TWELVE northeastern states there are 688,710 farm boys and girls, of whom 251,983 are not in school. The maximum enrolment of farm boys and girls in school comes in the eighth grade and drops off markedly after the sophomore high school period. Only 10 per cent will finish twelve grades or more.

The advantages of college or vocational school training in agriculture and home-making are apparent. However, in the entire United States there are only about 15,000 students in agriculture and home economics in colleges, and 89,000 taking similar courses in the vocational schools. Together, they make up only a small proportion of the seven million rural boys and girls of the country. The value of general agricultural courses as conducted at present in our rural schools can be questioned. Too frequently they are mere reading courses, not reinforced by actual experience on the part of the teacher or laboratory practice for the pupil.

Training Available if Desired

With a third of our boys and girls not in school, and approximately seventy-five per cent of all farm boys and girls remaining on farms it is essential that facilities for training, guidance and self help be provided if the group remaining in the open country is to be economically successful and provided with those things which go to make up a satisfactory rural life.

Thousands upon thousands of adults and young people are availing themselves of the correspondence courses of our agricultural colleges and the number is growing. The influence of demonstrations in agriculture and home economics carried on in rural communities is expanding continually. Thru these activities at their very doors, farm boys and girls can have the advantage of the latest scientific discoveries and can take home for themselves those things which they can apply readily.

The extension service of the Land Grant Colleges is splendidly equipped to assist in the solving of questions involving economical production, orderly marketing, sanitation, recreational and social activities. It is not in a position to furnish musical instruction and will never enter the field covered by the churches in their rural work.

Taught by Experience

Club Work is almost universally available to the boys and girls of a rural community if they and their parents desire it. The great majority of our agricultural counties are provided with extension agents and the organization of local groups to receive and carry on the work is simple. At present more than 600,000 farm boys and girls are being reached thru this channel and the number is ever increasing.

Based on the theory that "experience is the best teacher," club work offers the boy and girl a "doing" program closely connected with farm and home life; it makes possible the association of boys and girls with others of similar interest and provides opportunities for comparison and friendly competition. "Exposure" to the realities of farm life and related activities comes thru participation in county fairs, auto trips to outstanding farms, inspection of factories dealing with farm products, trips to State College and inter-state shows.

Club Work has well-balanced educational, economic and social aspects and there is much evidence that it is leading a large number of farm boys and girls on to the point where they will become part of a large group enjoying a prosperous, happy, contented rural life.—Allen L. Baker.

A Trooper Asks Questions

Checking the credentials of suspicious characters is one of the methods used by the Pennsylvania State Police to prevent crimes against farmers and their property

Did you ever hear this one?—

New Uses for Drug Stores

A novel use for drug stores has been discovered in Jamaica. It is the custom there for negro mothers to choose the most complicated and high-sounding names for their children. Long biblical names have been used so often that they are no longer desirable, and the natives are finding that the only way to achieve startling originality is to appropriate words from druggists' prescriptions or from the labels of the bottles on their shelves.

Accordingly one finds children not only Epaminondas or Gabriel, but also Epsom or Sulphuric.

A certain negro woman appeared one day before an Episcopal clergyman for the christening of her recently arrived twins.

"I want to call one Benzine and one Tartaric," she said.

"But, my dear woman," objected the minister, "I cannot give them such awful names."

"Dat's what I'se wantin' to call dem, sah."

"It is not fair to the children," said the clergyman. "I shall christen one John and the other James."

The mother's objections were overridden, and the children duly named John and James. But after the ceremony was over, the negress turned to the minister and said:

"All right, Boss, all right. But one o' dem kids is a gal."

Good Proof

A gang of men were working on street repairs in front of a woman's house. She seemed quite interested in them and asked one of them, a big burly Celt, "Which is the foreman?"

"Oi am, mum," he replied proudly.

"Really?" continued the lady.

"Oi kin prove it, mum," rejoined the Irishman. Then, turning to a laborer at hand, he added: "Kelly, ye're fired!"

Quit Splashing!

A Kansan sat on the beach at Atlantic City, watching a fair and very fat bather disporting herself in the surf. He knew nothing of tides, and he did not notice that each succeeding wave came a little closer to his feet. At last an extra big wave washed over his shoe-tops.

"Hey, there!" he yelled at the fair, fat bather, "Quit yer jumpin' up and down! D'ye want to drown me?"

Hot Days

Arriving home from the party, friend wife confronted her husband. "I'll never take you to another party as long as I live," she fumed.

"Why?" he asked in amazement.

"You asked Mrs. Jones how her husband was standing the heat?"

"Well?"

"Why, her husband has been dead for two months!"

Corporal—I hear that the drill sergeant called you a blockhead.

Private—No, he didn't make it that strong.

Corporal—What did he actually say?

Private—Put on your hat; here comes a woodpecker.

Cute Mascot

Rub—I have a new attachment for my car.

Dub—What is it?

"Sheriff's!"

OUR YOUNG PEOPLE'S FORUM.

Another "Treasure Hunt" Contest

SINCE our Treasure Hunt Contest last winter several Forum cousins have written in asking for another one. All right, here it is. Those of you who chased thru Pennsylvania Farmer hunting sentences for the other contest may remember the rules of the game but in case there are some who do not, and for the benefit of those who weren't with us then, I'll print the rules again. Better read them thru before mailing your correct sentences just to be sure you haven't forgotten anything.

Instead of directions telling you where to go the jumbled words below will send you off on your chase for the correct sentences which are to be found somewhere in this issue of Pennsylvania Farmer.

First: Read these twelve jumbled sentences which don't make a bit of sense as they are:

1. It broiler as cockerels soon as reach they weights pays all to marketable market.
2. Legumes, are the as a satisfactory, most rule.
3. Weeds so so grew fast that big and decided it we not was while worth.
4. Thru thickly main the crowded they thorofare with drove care.
5. Flower has each, corolla, calyx pistil and stamens.
6. You can then have finished the same in it as color the woodwork of the rest.
7. Some of northwestern in the allowances counties will be there liberal.
8. Paper is the cut a strip in two and long half yards by a wide fifteen inches.
9. She, first out tray hunted convenient sized a.
10. Look the puzzle and thru out which find comes letter oftenest.
11. Out of a helped place hard by fellow a little ten years scarcely of age!
12. You ever did notice things how cycles in run?

Second: Look thru this issue of PENNSYLVANIA FARMER. Somewhere between pages 1 and 20 the correct sentences are to be found.

Third: When you find the correct sentences write them down as neatly as you possibly can, telling on which page each was found. Please do not copy these jumbled sentences. I want you to send in correct sentences.

Fourth: In the upper left-hand corner of your paper write the word "Contest" and in the upper right-hand corner your name, age and address, including county. If you want to write a letter to the Forum at the same time please use a separate sheet of paper.

All contest papers should be addressed: Cousin Ruth, care of PENNSYLVANIA FARMER, 261 S. 3rd St., Philadelphia, and should reach me on or before July 9th.

The treasures, six prizes, three for those over twelve and three for those twelve and under, will be sent to the six Forum cousins who send in contest papers which are absolutely perfect and are the neatest.

I hope you enjoy this hunt as much as the last one. What other contests would you like to have?

COUSIN RUTH.

Letters from Forum Members and Friends

Dear Cousin Ruth:—Our school closed May 13th. On that day Klingeman's school and Walburn's school went together and had a picnic over at Ellis Grove. We sure had a fine time. We started from the school at a quarter after eleven. We met at the turn that leads to the grove at half past eleven. The other school was there first but they waited till we came.

Our cousin came a few weeks ago to visit us. We wrote and asked him to bring his camera along. He is going to take my picture and then I will be sure to send you a print of it. Today is a misty and rainy day. I like to ride horseback but today we went down to the creek for a load of sand but there wasn't any and when we were about to turn around the horse fell in the creek. They had an awful time to get him out and when they did get him out he had the chills so they took him to the barn. Then father, brother and my cousin took the other two horses and went to another place for sand.—Myra Klingerman (X), Schuylkill County, Pa.

SPOTTY IS FIFTEEN
Laura Stephens, (X), Chester Co., Pa.

Dear Cousin Ruth and Forum Friends:—I have three little puppies about six weeks old. I have four horses. I am going to plant two acres of corn and cut about eight acres of hay with them, tend to the garden and help my father.—Carolyn E. Dates, Tompkins County, N. Y.

Dear Cousin Ruth:—I want to tell you about two wrens who started to build a nest in our clothespin bag hanging beside our kitchen door but I suppose they have changed their minds on account of too many people going in and out of the door. When I looked inside the bag they had twigs and spider web in it ready to build a nest. When the father bird gets some twigs he put them into the bag and calls the mother bird and she comes and fixes them. Then he makes a funny noise way down in his throat. It sounds as if he is saying it is all right.—Harriet Marie Heckler, (X), Montgomery County, Pa.

Dear Cousin Ruth:—I am sending a picture of my pet dog, Laddie. As you see I have great fun playing with him. He is all dressed up for a ride.

READY FOR A RIDE
J. Arthur Eshenshade (X),
Lancaster County, Pa

I have a camera and will try to send you more pictures later.—J. Arthur Eshenshade, (X), Lancaster County, Pa.

Dear Cousin Ruth:—Our school closed April 30th. We had a grand time. Our teacher served ice cream, candy and cakes. We played all kinds of interesting games in the school house. It had rained the night before and there were showers off and on thru the day.

I also went to West Chester play festival with my teacher, her sister and one of my school and class mates.

We have a lot of strawberries. Last year we had three rows. We set out 950 plants this year, too. I wish you could come out and help me pick some, then start and eat till we were just filled up and couldn't eat any more.—Nina L. Cox, (X), Chester County, Pa.

That strawberry invitation sounds interesting. You don't live very far away from me so if I could find the time I might surprise you in strawberry season. I'm not going to count on it too much, tho, for I'm afraid I'll be busy elsewhere and can't come.

COUSIN RUTH.

Dear Cousin Ruth:—My pet cat is over his cold. I received your pin. Yesterday I was in a dialog at the society in Slepestown. I was glad for the pin. We still have a few rooms to clean in the house. I helped to clean every one. I like to clean house. I have thirty-seven music lessons and Margaret, my sister, has five music lessons. We are cleaning house today. Margaret was fishing yesterday but she didn't get anything.—Laila M. Danner, (X), Lehigh County, Pa.

Dear Cousin Ruth:—I do not live on a very big farm. We raise mostly fruits, strawberries and pears. I would like to send you some of the fruits but they are not ripe. The trees are just blooming.

We have our garden all dug and planted lots of things. I planted pumpkins to make spooks for Hallowe'en.—Ruth Adams, Berks County, Pa.

Dear Cousin Ruth and Forum Friends:—I received the membership pin. Thanks very much. I live on a farm of ninety-seven acres along the Lincoln Highway five miles east of Lancaster.

Last year we started an orchard and finished it this year. We planted 1100 trees in all, 350 apple trees and 750 peach trees. One of the peach trees I saw had four little peaches on it.—Reba Ranck, (X), Lancaster County, Pa.

Dear Cousin Ruth and Readers:—I received my membership pin and was very glad to get it. I wore it to school and all of the children asked me if I was really a member or if I had someone else's pin. They wanted to know how I got it and if they could get one and so I told them that they could if they would send in a letter to the Forum page.

Helen F. Hreher and I go to the same school. We are both in the eighth grade. We are only taking three subjects now, English, history and hygiene. We are trying to finish school soon.—Jennie E. Jones, (X), Broome County, N. Y.

I hope you made it clear to your schoolmates who asked how to earn a Forum membership pin that only particularly good contributions were so honored. It wouldn't be any fun at all if the writer of every letter received a pin. I read all the letters that come in each week and from them select what I consider the best. These are the Forum cousins who are made members and to whom I send a pin.

COUSIN RUTH.

OUR LITTLE FOLKS' PUZZLE CORNER

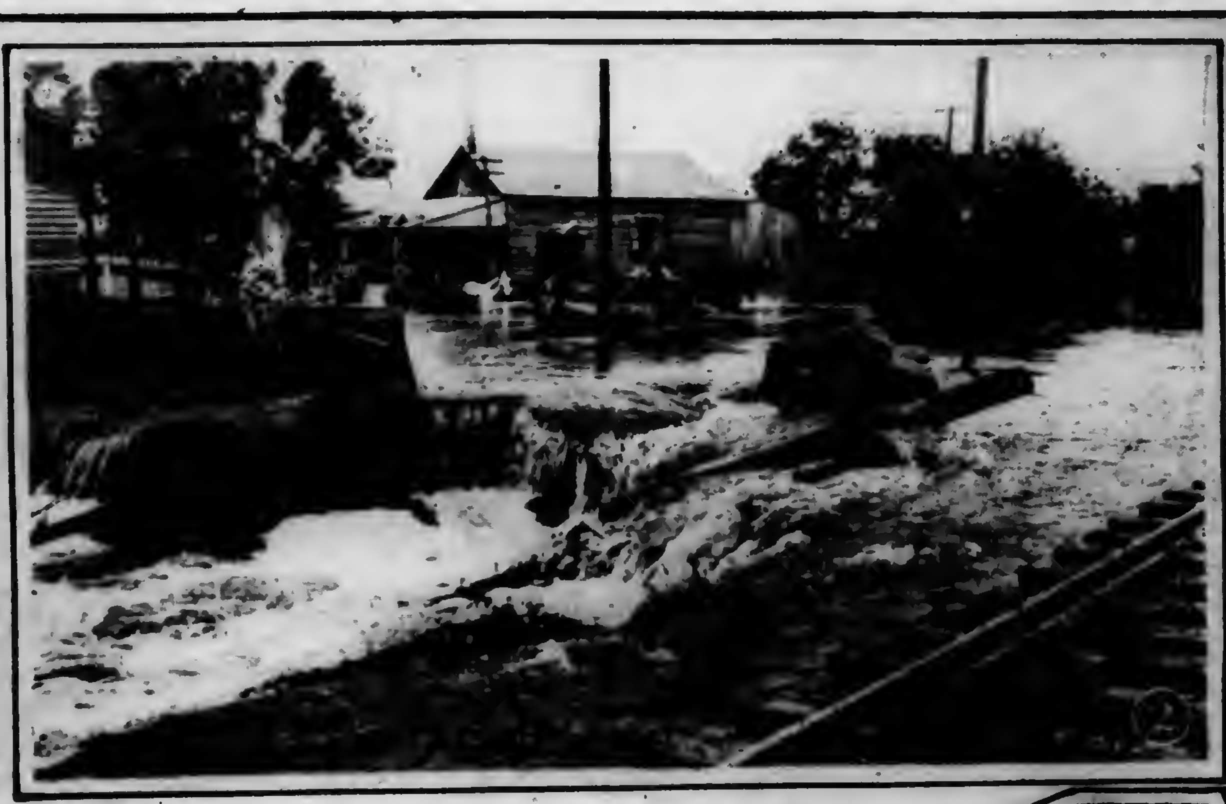
DEAR LITTLE FOLKS:—Did you ever spread out your things that you wanted to pack up to take away with you on a little trip? Did you ever find out that, after all, you could get along without quite a number of these things? As a matter of fact, these letters that are spread out here in our puzzle this week all seem to think they are going on a trip. There is one letter, as you will see if you go carefully over the letters in the square, that keeps pushing its way in and doesn't belong there at all. Look thru the puzzle and find out which letter comes oftenest. Then see, if by leaving that letter out, you can group the letters into words which form a sentence which you may have often heard. All the other letters are in the correct order, but you will need to find out where one word ends and another begins because you don't want to make itlooklikethis when you pack up your answer. Let me have your answer by July 2nd. You may send it on a postcard or in a letter but BE SURE TO SAY HOW OLD YOU ARE, WHEN YOUR BIRTHDAY COMES AND THE NAME OF YOUR COUNTY. The prizes go to the ten children, sending in the correct answer, whose cards or letters are the best in grammar, spelling, punctuation, penmanship and general appearance. Address all puzzle answers to The Puzzle Editor, PENNSYLVANIA FARMER, 261 South Third Street, Philadelphia, Pa.

LEN OLUG
HILS ALS
GLOL OLD
LASLA
FLE LAST

The answer to the puzzle in the June 4 issue (the one about the ten words which began with the same letter as the names of three months of the year) is: 1. Jonah; 2. Jam; 3. jelly; 4. Jan; 5. jail; 6. jump; 7. jay; 8. joy; 9. Jersey; 10. jewel.

The prize winners are: Elizabeth R. Bucher, age 13, Gettysburg, Pa.; Ruth S. Crouthamel, age 13, Ottsville, Pa.; Isabel Emery, age 11, Lewisburg, Pa.; Merle Fowler, age 11, Latrobe, Pa.; Gwendolyn Gray, age 10, DuBois, Pa.; Genevieve Hahn, age 9, Union Bridge, Md.; James C. Hartle, age 11, Waynesboro, Pa.; Ralph M. Kerchner, age 10, Lineboro, Md.; Marie Smith, age 11, Bedford, Pa.; Emily Smithcoss, age 5, Elmer, N. J.

PASSING EVENTS IN PICTURES



(Copyright by Underwood & Underwood)

1.—Clarence Chamberlin and C. A. Levine just before the start of their record-breaking long distance flight to Germany.
2.—When the first flood waters reached New Iberia, La., Texas cowboys helped to corral and drive all livestock to safety.
3.—The President and Mrs. Coolidge on board the Mayflower just before they sailed down the Potomac to Hampton Roads where the President reviewed the Atlantic Fleet.
4.—Pennsylvania State College made a good showing at the Intercollegiate A. A. A. A. Track and Field Championship meet at Franklin Field, Philadelphia, on May 28th. Alfred H. Bates, of State College, won the broad jump with a leap of 24 feet, 8½ inches.
5.—The first Distinguished Flying Cross ever struck off was presented to Col. Charles A. Lindbergh by President Coolidge on June 11th.
6.—Lloyd Kaiser, Gertrude Kaiser and Kenneth Walters, of Clayton County, Iowa, the champion dairy judging team of the United States, are on their way to Europe to compete with judging teams there.

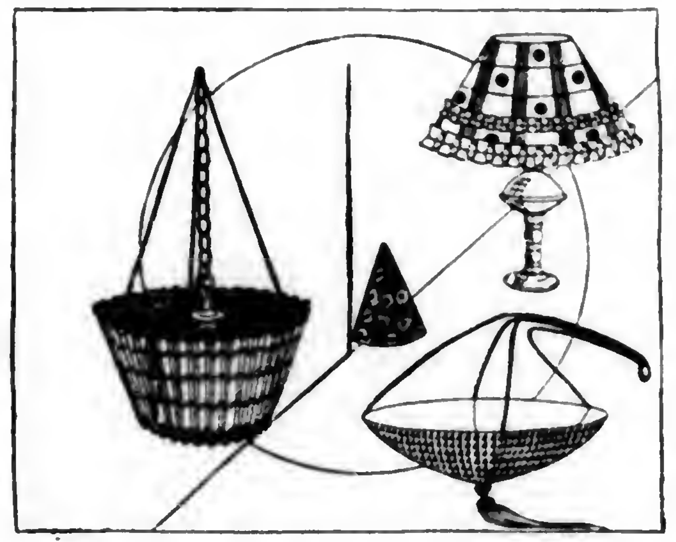
Lights Shaded with Soft Colors Screen the Glare That Ruins Eyes

EYESTRAIN is caused by too brilliant a light just as it is caused by too dim a light. The shade is an eye saver but many people do not know how to use lamp shades. Warm colors, such as yellows and pinks, and even red violets, are best for this purpose as they are more cheerful and do not absorb the light as do blues and some greens. Where blue is used for a lamp shade it should be lined with yellow or peach or sand.

The most modern fad for lamp shades is gingham, in keeping with the peasant and Colonial interior rage now sweeping the country. The colors are warm and beautiful, and very effective with the light shining thru the designed or one-tone fabric. Some of the new novelty ginghams in the thinner weaves give just the right note of interest to the room both during the day and at night when the lamps are lighted. So much gingham is being used for window drapes and slip covers that lamp shades to match or accent the upholstery and draperies, in the same material are ideal.



An attractive shade for the small chandelier, such as is suspended from the ceiling by a single chain, can be made by pleating gingham over wrapping paper. For a fifteen-inch shade this will require one and a quarter yards of thirty-two-inch gingham cut in half to get the two and a half length. The paper is cut in a strip two and a half yards long by fifteen inches wide. A three and a half inch strip in a contrasting color or pattern is cut two and a half yards long for the top and the bottom of the shade. This should be in a plain gingham accenting the predominating color in the design if the shade is of figured material, and in a figured material if the shade is of the plain.

Figured Gingham Bound with Plain

The band is used as a deep binding doubled over the edges of the paper and gingham and hemmed down. This is pressed and the gingham and paper are pleated together in inch pleats, or even deeper. Two discs of about nine inches in diameter are cut from thin cardboard, covered with the gingham, and joined together. The shade is seamed, and the bottom sewed to the gingham disc. A cord is run thru the top, and the whole fastened to a frame. The shade is suspended from the chandelier by cords as shown in the sketch. A strong light shade wrapping paper should be used. Tissue gingham is best for the outside.

The cone-shaped sconce to set over the bracket wall lamp is of a green and yellow novelty pattern. The shade for the inverted ceiling light in the lower right-hand corner is of green and yellow check with either a green or yellow tassel and green or yellow cords.

The shade for the table lamp with a glass base shown in the upper right-hand corner is of one of the handsomest of the new novelties. It is here shown as made from the fabric in a plaid on a peach ground, the plaid formed by pin stripe white lines with a superimposed blue dot which looks like embroidery. It also comes in rose with a green dot, blue with a red dot and orange with a green dot. The shade as shown in the sketch has ruffled pleatings of the one-tone peach, and is most effective with the light shining thru.

The colors in the shades must be in harmony with the color scheme of the room. They either "tie up" with the colors used in the draperies, or may be accenting color spots in contrasting shades, as for instance a yellow spot in a blue room, or a rose spot in a green room, or they may be in designed material matching the trim of the drapes, or carrying thru the colors in the wall paper. Care must be exercised never to have too much design in one room.

Note:—The charm of the lamp shades in our homes today is a very subtle thing, and I hope you will reread this story and then get busy. Nothing adds greater welcome than a fireplace, and the lamp comes next. Make a pretty shade this summer, and see if you agree. These designs are just as appropriate with gas or kerosene lights as with electricity, so do not wait for power to have beautiful lamps.

You may feel anxious about the working frames, if so, we want to help you. We are glad to give you the address of a firm that has all sorts of shapes and models to build on. If your lamp fixture is much out of the ordinary, they will make a frame to order.

Write me about your plans and let me assist you. Address Home Page Editor, care of PENNSYLVANIA FARMER, 261 S. 3rd St., Phila., Pa. Please send me a self-addressed, stamped envelope for reply.—Gertrude S. Stewart.

The Kitchen Cabinet

POTATO CUP WITH JUNE PEAS

MASH and season fresh boiled potatoes, adding a taste of grated onion or a few drops of kitchen bouquet. Form into cups with the hand, and arrange on a large serving plate. Pour into the cups green peas or diced string beans that have been cooked and drained. A generous slice of butter and a dash of paprika top off each serving. Then set in the oven to keep heated thru until ready to serve.—C. R.

• • •

CHERRY TART

Into a baked shell of rich flaky pie crust, pour two cups of pitted, stewed, sweetened cherries. Do not use the juice, but heap over the top a cover of whipped cream, sweetened and flavored to taste.—Clarice Raymond, N. Y.

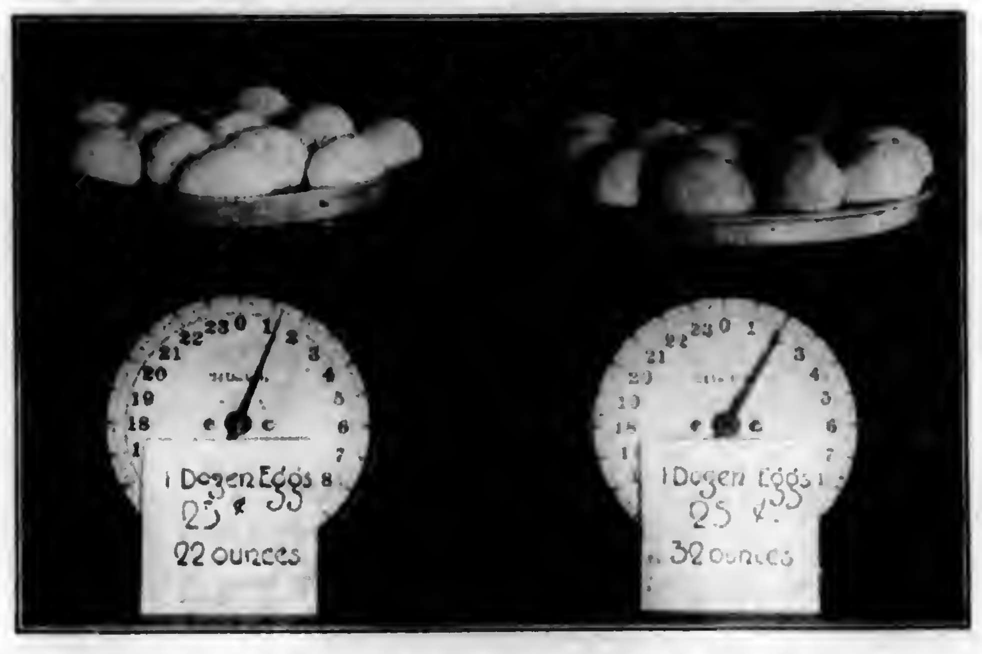
• • •

PICTURESQUE PICNIC SALAD

Dice five cooked potatoes. Prepare 1 cup of cooked macaroni and cool. Arrange attractively washed lettuce leaves to extend well out on the salad plate or bowl. Scatter a layer of potatoes over the leaves, then a few slices of onion then the cooked macaroni, and lastly the remaining potatoes. Cover with the following salad dressing.

Heat to nearly boiling 1 cup vinegar. Mix one-third cup granulated sugar, 2 tablespoons flour, 1 beaten egg, 1 tablespoon butter and 1 tablespoon mustard. Stir this mixture into the heated vinegar and thin to desired consistency with cream or top milk. Garnish the finished plate with rosy red radishes that have been peeled partly down the sides to open like flowers.—Mrs. Eugene Williams, N. Y.

Note:—Unless the potatoes and macaroni have been well seasoned in the cooking, you should add salt to this dressing.—G. S. S.



The value of eggs at a certain price varies with the size. Some day they may be sold by the pound as bananas now are in some places.

A Versatile Tool Cuts Thru Many Tasks

YOU keep a pair of shears in your work basket and walk ten miles every year going after it and taking it back to its place. In fact, you probably know only half the uses to which shears should be put.

To be properly furnished a house should have at least six pairs of shears. One in the sewing room, always bright and sharp. One in the bathroom or medicine cabinet to cut the strip of bandage when you tie up Freddie's cut finger, trim that unruly lock of hair that drops down in little daughter's eyes, or cut the frayed ends from a hair ribbon. The third pair in the kitchen, to cut string, paper and open pasteboard boxes, also to clip the meat for salads, the marshmallows you are scattering over the pudding, the lettuce, celery and parsley of which you want only a little, not enough to pay for getting out the chopping board.

On the back porch (a heavy pair) to use in cutting off green tops from radishes, carrots, beets or turnips, to take with you when you go out for the bouquet for the dinner table, to cut a discarded apron into right sizes for dust cloths, and fit into a hundred emergency uses. Keep a pair (blunt pointed ones) in the children's play rooms, since "cutting out things" is one of the dearest delights of the small girl or boy. I have an extra pair on my writing desk, for opening envelopes, clipping notes, etc., and could not well dispense with them.—Lalia M. Thornton, N.Y.

Sealed Edges Bar the Moth Invader

STORE winter woolens clean and in sealed boxes or trunks to avoid damage from moths, advises the New York State College of Home Economics. If no moths or moth eggs are in the garments when they are put away and if there are no openings in the container so they may enter, woolens will come out of storage in as good condition as before.

Dry cleaning, washing or thoro brushing with special attention to pockets, seams and pleats where eggs may be hidden is necessary. Sunlight and air are enemies of moths, and it is well to hang garments out-of-doors in the sun for a few hours before storing them.

Cardboard suit-boxes make good containers for wool garments that are not used during the summer. If the clean garments are put in the boxes and the edges are sealed with strips of gummed paper or with newspaper and paste, moths cannot get at them.

Napthalene and paradichlorobenzene, either of which may be obtained at most drug stores, help prevent moth damage. Scattered in folds of blankets or clothing before they are wrapped, these substances give additional protection against the pests.

One of our readers, Mrs. Harry C. Davis, has requested a leaflet and a library book, enclosing stamps for the latter, but failed to give her address. Won't you please tell us where you live, Mrs. Davis, so that we may send the book and the leaflet to you?

Alma Makes a Startling Discovery

ALMA had been fortunate in having reliable kitchen help from the very beginning of her married life—until the situation changed and she had to start in getting meals herself. She wasn't pleased about it for her memory of pre-mealtime in the kitchen was that of a disordered, steamy and confused place. But Alma was systematic and she made up her mind to keep everything picked up as she went along to save steps.

First, she hunted out a convenient-sized tray.

Second, she spread some newspapers about on table and drainboard.

Third, she held herself strictly in hand to take a load both ways.

Fourth, she put things where they belonged, steadily avoiding setting them down to be taken care of later.

Bored No Longer

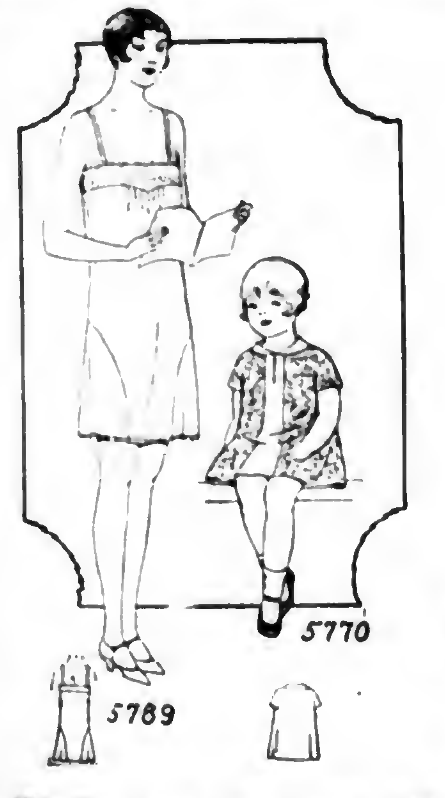
And last, but not least, she aggregated all left-overs into the smallest possible space and used them up from meal to meal to make good things to eat. Salads, soups, little casserole dishes and creamed foods attractively served on crisp buttered toast, all helped out.

In place of being bored to death as she had expected, she suddenly found herself tremendously interested, and of her own free will and without solicitation, soon enroled in a housekeeping class where she learned much of value to her.

"You see," smiled Alma the other day, "what I thought was going to be a terrible trial, really proved a blessing in disguise.—E. G. W.

Foundations Count

Directions for Ordering.—Give figure or figures of each pattern exactly as printed at beginning of each description. Give bust measure when ordering waist patterns, waist measure for skirt, and age for children's patterns. Address Pennsylvania Farmer, 261 S. Third Street, Philadelphia, Pa.



5789.—Four sizes: Small, 34-36; medium, 38-40; large, 42-44; extra large, 46-48 inches bust measure. To make the garment for a medium size will require 1⅜ yard of 36-inch material. For yoke portions of lace or of embroidered banding 1⅜ yard will be required. Shoulder straps of ribbon require 1⅛ yard. Pattern, 10 cents.

5770.—Five sizes: 1, 2, 3, 4 and 5 years. A 3-year size will require 1½ yard of 27-inch material, together with ⅝ yard of contrasting material for panel and facing on the collar. Pattern, 10 cents.

Send 10c in silver or stamps for our up-to-date spring and summer 1927 Book of Fashions.

Needs no watching

Color in Newest Perfections!
Gray porcelain enamel tops. Gray legs. Satin-black body finish. White enamel warming cabinets. Large white front ovens. —On newest Perfections, and *all* those with Superfex burners.

The modern Perfection Oil Stove cooks merrily away while you do other things.

Put your roast or cake into the Perfection Oven, your vegetables on to boil. Set the flames high or low to suit your cooking needs. You can trust them to remain as you set them, while you do other things.

Have your dealer demonstrate the newest Perfection Oil Stoves. You can then see for yourself that they need no watching. One to five burner sizes. Priced from $7.25 to $130.

PERFECTION STOVE COMPANY, *7609 Platt Avenue, Cleveland, Ohio*

PERFECTION
Oil Stoves & Ovens

WARNING: Use only genuine Perfection wicks on Perfection Stoves. *They are stamped with red triangles.* Others will cause trouble.

No smoke, soot, or odor with Perfection long chimney burners.

Kill All Flies! THEY SPREAD DISEASE
Placed anywhere, DAISY FLY KILLER attracts and kills all flies. Neat, clean, ornamental, convenient and cheap. Lasts all season. Made of metal, can't spill or tip over; will not soil or injure anything. Guaranteed. Insist upon DAISY FLY KILLER from your dealer.
HAROLD SOMERS Brooklyn N. Y.

Why Burn Coal?
or Wood in Your Cook Stove or Heater when you can have instant heat with convenience by installing a Uni-Hete Kerosene Burner in five minutes' time?
For a limited time we offer to send C. O. D. this $15.00 burner complete — including flexible fuel supply tubes, regulating valves and galvanized iron tank, ready to install, for only $6.00.
Fits Any Stove or Range
Fully guaranteed against all defective workmanship and material for one year. Any part that proves defective, if returned, will be replaced free of charge.
$6
New 1927 Uni-Hete Burner Outfit
vaporizes kerosene or distillate, mixes it with air, producing an intensely hot, clean, smokeless, silent burning flame. Heat can be regulated to any degree by fuel controlling valves. Improves your stove 100%. Have been manufacturing oil burning devices for thirty-three years. We make this offer for a limited time only. Specify if for range or heater.

Oats, Number 2 white (Philadelphia)	[illegible]	[illegible]	[illegible]	[illegible]

Supplies Depress Potato Market

Review of the Week Ending June 18

POTATOES—New potatoes were generally weak altho during the middle of the week there was a firmer tendency. Shipments continued heavy and prices made further declines at the close. Heavier movement from North Carolina and the Eastern Shore of Virginia was chiefly responsible for the decline. The mid-western markets are now receiving home grown potatoes thus cutting down the outlet for eastern stock. Old stock was in light supply and altho prices were lower they were still high as compared with present prices for new stock. On Monday, June 20, the market opened firm in Philadelphia with Virginia Cobblers ranging from $5.75 to $6.25 per barrel.

SMALL FRUITS—The strawberry season has passed its peak and arrivals in Philadelphia are light. There is a wide range in quality. Fancy stock sold as high as $9.50 per 32-quart crate. The cherry season has opened and this week will probably see heavy shipments from Pennsylvania and New Jersey. The market is in good condition with cherries of good quality selling around 10@12c per pound. Gooseberries are on the market and are in limited demand. A few raspberries have been offered at rather high prices.

POULTRY—The live poultry market in New York was dull early in the week with considerable carried-over stock. On Wednesday the demand improved and by Thursday the market was about 1c higher. On Friday heavier receipts attracted by the price advance caused prices to drop and several carloads were carried over. The dressed poultry market was steady with fancy broilers and fowl selling readily.

BUTTER—The markets were unsettled with trading rather unsatisfactory. There was an almost complete lack of speculative demand. Receivers placed considerable butter in storage to prevent losses. Prices held generally steady and closed about one-half cent lower in eastern markets.

EGGS—The New York egg market improved during the week due to lighter receipts and a more active demand. There was very little business on Monday on account of the Lindbergh reception but toward the close of the week trading improved and prices advanced.

LIVESTOCK—The Chicago hog market was irregular and prices were lower toward the close of the week. Fed steers and heifers were strong while cows were unsettled. Vealers and heavy calves advanced 50c while stockers and feeders were generally steady. Fat lambs and yearlings dropped sharply with fat ewes and feeding lambs weaker.

GRAIN—The grain market was irregular and at the close wheat prices were lower due to a lack of export demand and better weather conditions. Corn was about 6c higher than last week but showed a weaker tone at the close. Oats were practically steady.

HAY—Hay markets were generally quiet with a limited demand. Receipts of timothy were generally light and most of the offerings were of common to ordinary hay. Top grades were scarce and active but most other stock was quiet under a limited demand.

FEEDS—The market was generally steady with the strength in the corn market. Bran was generally weaker but red dog and shorts were steady. Linseed and cottonseed meal were steady.

NEW YORK MARKETS

LIVESTOCK

Cattle—Steers scarce, steady; good bullocks, $[illegible]@12.75, few $12.10, medium, [illegible]. Cows, 10@25c lower; all cutters, $[illegible]@4.40, common and medium, $5.50@7.25. Bulls, 25@50c lower, medium bulls, $6.50@7.50, light weights downward to $5.75. Calves, vealers, steady; choice, $14@14.50, medium and good, $11@13.25; cull and common, $8@10.50, slaughter, [illegible]. Lambs, $7@8.75, average [illegible]@320 lbs.

Hogs—[illegible] lower, desirable slaughter [illegible] 10.25, 200@250-lb weights, [illegible], heavy sows, downward to [illegible].

Sheep—Lambs, [illegible] $1 [illegible] lower; decline [illegible] of the [illegible], extreme top for [illegible], $17 [illegible], bulk at the close, $15.25@[illegible], few $[illegible], [illegible] per cent cuts, [illegible]. Sheep weak to [illegible] lower; bulk [illegible] ewes, $[illegible], $2 [illegible] 3.50.

HAY AND GRAIN

Soft winter wheat middlings	39.25@45.50
Flour middlings	42.75@48.50
Red dog flour	48.50@51.00
White hominy	41.20@42.00
36 per cent cottonseed meal	42.00@44.50
41 per cent cottonseed meal	45.50@46.00
43 per cent cottonseed meal	47.50@48.00
34 per cent linseed meal	52.50

Millfeed easier with demand light and production ample for nearby requirements.

County News and Comment

Berks County, Pa.—Since June 9 hot weather conditions have been favorable for growing crops. Wheat is heading, none has lodged and the fields look favorable. Oats fields are well covered with young plants. Much corn was replanted due to poor seed and cold season. Most of the corn was not tested before planting. Grass looks good. Most of the farmers are arranging to attend the biggest Grange and farmers' field day and picnic on the Reading Fair Grounds on Tuesday, June 21, when prominent speakers will deliver addresses. Farmers and Grange members are expected to attend from Berks, Lehigh, Northampton, Lebanon, Schuylkill and adjacent counties. More interest is being taken in the county Grange than ever before. Over 500 attended the meeting at Bernville on Saturday, June 4, in spite of the rainy weather. The Granges of the county will run an excursion to Willow Grove on August 10th. Never before in the history of the county has so much interest been taken by the farmers with the idea of knowing and helping each other. Old alfalfa fields have been seeded to corn and potatoes. In some localities corn has received its second cultivation. Wheat, $1.40; oats, 50c; old potatoes, $4; eggs, 24c; butter, 45c; hay, $24; straw, $15.—W. N. M., June 11.

Frederick County, Md.—Corn planting is late on account of wet weather in May. Little oats was planted, cold spring. Grain crop will not be more than three-quarters of average crop this year. Fruit looking good. Prospects are for a fair crop. Grass is extra good and should make a bumper crop. A large number of herds of cattle have been T. B. tested in the past two months. The county should be cleaned up soon. Eggs low, 19@20c; young chickens about 30c; hay, $15; corn around $1; strawberries low, a good grade selling in local retail stores at 2 boxes for 25c.—R. J. W., June 13.

Lackawanna County, Pa.—The last of May and first few days of June were wet and cold with a killing frost in some sections on the 2nd, damaging early gardens, tomato plants and fruit. Meadows look good. Corn not all planted and gardens are just being planted in many places. Spring pigs have been rather scarce, bringing $12 to $14 per pair; butter, 48@50c; eggs, 30@35c; early strawberries, 27c qt.—E. A. K., June 10.

Lancaster County, Pa.—Recent rains have been very favorable for transplanting tobacco and young plants are being set out. There has been a heavy loss in the plant beds from a plant disease known as "wild fire." Corn is growing but is very small for the time of year. Cold weather has injured the timothy. Sweet clover and alfalfa are making better progress. Potatoes very scarce and high in price, $2.50 bu. at the farm. Eggs have been plentiful and have dropped to 21c. Butter remains about the same price, as does also milk.—R. C. R., June 14.

Monroe County, Pa.—Edwin R. Gearhart, of Tannersville, celebrated his 95th birthday on June 8th. Farmers are replanting corn. Potatoes are coming thru, seed scarce and high. Grass, oats and truck crops looking good. Heavy thunder showers and severe winds passed over the county on the 10th. Buckwheat ground is being plowed. Little sown.—E. S., June 10.

Passaic County, N. J.—Except for the last few days the weather for the last month has been too cool for the growth of vegetables. Strawberries from this section were in market June 7 for the first time and brought about 25c a quart. New beets and carrots are in also. The asparagus season is closing with a rather poor year as the season started late. Owing to the warm weather at the end of last week, the market was slow except for warm weather foods—lettuce, radishes and strawberries. A light frost on May 28 did little damage.—N. D., June 12.

Potter County, Pa.—Fair weather has arrived after weeks of rain. Oats and most of the potatoes are in the ground, gardens just made or being made. Frost came when fruit trees were in blossom. Apple crop injured but pears and plums show little injury. Strawberries plentiful. Dairy cows are selling at $100 each. Potatoes sold in nearby towns for $4 bu. Cabbage 20c; eggs, 25c; cheese, 23c.—M. C. S., June 11.

Salem County, N. J.—There is more prosperity in the county at this time than for many years. Every indication of a bumper crop for almost everything grown commercially. The white potato outlook is one of the best for a great many years. The vines are almost knee high with no signs of disease. Corn is late and the tomato plants are not yet all set in the field, both having been delayed on account of cold weather. Most of the fields have a good stand of corn. There are plenty of young chickens on the farms and they have made a fine growth. There are very few reports of any disease.—E. M. B., June 9.

Snyder County, Pa.—Farm work well advanced. Corn all planted but slow coming up. Much replanted. Oats, wheat and grass showing splendid growth. Potatoes are being sprayed. Much testing of dairy cattle with less percentage of loss than previously. Raspberries promise immense yield; cherries poor, apples will be half a crop and peaches somewhat better. Most orchards sprayed, some spraying second time, as early rains defeated the plans of fruit growers. Good demand for fowls by hucksters and market men. Buckwheat is being sown. Pays on scant hillsides and even rich lands better than most crops. Locally grown strawberries good crop and a ready sale at good prices.—W., June 13.

Tioga County, Pa.—The continued wet weather has made farming difficult. Hay promising and pastures good. Oat seeding and corn planting late. Gardens two weeks behind normal. Most dairies doing well. Eggs plentiful and very cheap. There have been heavy losses of baby chicks due to cold, wet weather. Some farmers plowing for buckwheat. The prospects for fruit not very good. Potatoes scarce, seed bringing good prices. Young pigs fairly plentiful, bringing $5 each. Eggs, 21c.—P. W. L., June 14.

Rambles of a Pennsylvania Fruit Grower

(Continued from page 2)

worse. Three dry years (1933 to 1925) left the range bare of grass and cattle starved to death by the thousands. Banks failed. The year 1926 was a good grass year but the cattle men have had trouble in borrowing money to buy new stock.

The fruit growing of the upper Rio Grande resembles that of the Pacific Coast. Eastern varieties of grapes do not succeed here. California varieties of Vitus, Vinefera, especially Muscat, Alexandria Cornishon and Mission are grown on a stump training without a trellis, the fruit bearing shoots that spring from the short trunks are strong enough to support the clusters of grapes, from the ground. The vines are buried in soil for water protection when young.

Pruning Differs from That of East

Pruning consists of selecting five to ten strong canes and cutting each one back to two or three shoots. A good vine will bear 50 pounds of grapes. Clean cultivation with no cover crop is the rule but the older vineyards so treated are beginning to show the need of organic matter. There are no rots and mildews to combat in this dry climate. The only spraying is an occasional application of nicotine for red spider.

An eastern fruit grower notices the close pruning and the thick tops of the fruit trees. Apples are set twenty to twenty-five feet apart, headed at the ground, and the tops are kept as brushy as some of the horrible examples used in eastern pruning demonstrations. This is necessary, I am told, because of the intensive sunshine; a tree that is pruned as open as we prefer it in Pennsylvania would sun scald. The trees are short-lived; apples begin to die out in twenty-five to thirty years.

Irrigation is mainly by flooding, usually every month of the year, and applying two or three inches each time. Most of the orchards are not cultivated at all but are left in alfalfa which is renewed every seven to ten years. Frequently the alfalfa is taken off for hay. No fertilizer is used. Six or seven sprays are applied to apples, mainly for codling moth which has four broods, making it necessary to use arsenic within three weeks of harvesting. This makes a serious arsenical residue problem. Wiping is not satisfactory; it is necessary to dip fruit in a chemical that will remove the stain.

Elberta Pear Ruined by Blight

Stayman, Jonathan and Delicious are the "big three" in the valley, with Rome and Winesap added in mountain orchards. The sawdust-like Arkansas Black, also, is a favorite—for selling to unsuspecting eastern tourists. There has been a prosperous Elberta pear industry but fire blight has ruined it and only Winter Nelis, Flemish Beauty and the worthless Lincoln are safe for planting. The J. H. Hale peach is superseding the Elberta for local trade.

The biggest hazard here is frost killing of the blossoms. Peaches and pears are now in full bloom (March 29) and I see a number of orchards that are supplied with heaters. Heating is expensive but it pays.

It was depressing to visit the New Mexico Agricultural College and find the faculty in danger of losing their positions from time to time according to whether the state administration happens to be Democratic or Republican. We have plenty of politics in Pennsylvania but, fortunately, not in our State College.

A glimpse of Juarez, Mexico, across the Rio Grande was not particularly inspiring. My most vivid impressions are of an almost unbelievably dirty, smelly and fly-specked Mexican market and of crowds of Americans who jammed the saloons which apparently comprise three-fourths of the town. I like it much better this side of the river.—S. W. Fletcher.

The Market Place

By W. R. WHITACRE

Pennsylvania Bureau of Markets

IN THE old days all good stories began with, "Once upon a time," ambled along leisurely and eventually ended with, "lived happily ever after." Today stories have been pepped up and the hero woos his lady, wins a fortune and marries her all in the course of a few pages. I read a story about a young man who "played" the stock market. At first he followed all tips on the market and invariably lost. It occurred to him that he always lost when he followed the other fellow's tip, so after that he always did the opposite. His luck changed and he soon accumulated a fortune and the girl of his dreams.

Contains Sugar-coated Moral

I believe that the object of fiction is to entertain but at times it carries a sugar-coated moral. In this story I do not think that the moral is to ignore advice but to break away from the crowd and do something different from the rest.

There is a market gardener whom I know well who works on this principle. His philosophy is this: "If there is a lot of money made in a crop this year, steer away from it the next. Try to find something that most farmers haven't thought of, or that they are losing money on."

I have known him to plow under acres of string beans when the bottom dropped out of the market and immediately replant the same field with more beans. It seemed a rather foolish thing to do and I asked him about it.

Keeps Ahead of the Game

"Well," he said, "I figure I have more than an even chance to make out this way. You see most other growers are scared off, they lost money on string beans and will plant something else. There is more chance of there being a scarcity and satisfactory prices now, and what assurance have I that I will be better off if I plant sweet corn or some other crop? The beans are cheap to grow and if I have to plow them under they make better manure than most other vegetables."

Did you ever notice how things run in cycles? In one district there was a period of several years when rhubarb sold well, more and more acres were planted and in a comparatively few years it was a poor paying proposition. Many growers neglected their rhubarb, dug it out and planted other crops. Now there are indications that there is going to be a better market.

Asparagus has been generally a good paying crop. Acreages are growing in all sections of the country, consumption is increasing but there is a "saturation point," as the scientist calls it, or a time when there is more asparagus than we can consume.

Keep Cats to Improve the Clover Crop?

(Continued from page 3)

which the clover belongs contains a great number of both wild and cultivated plants. The irregular shape of the corolla which was thought to resemble the shape of a butterfly is called a papilionaceaus (Latin papilio meaning butterfly) corolla, and is a marked distinguishing characteristic of the family. Among the wild plants belonging to this family are several genera which contain some extremely poisonous plants. One of the most poisonous to livestock is certain species of Astrogalus called the Loco weed which is abundant in the western part of the United States where many animals are killed yearly from eating the plant. Even our own common black locust contains a substance that is poisonous if eaten, also the beautiful wild lupine (Lupinus perennis) and rattle box (Crotalaria sagittalis).

While a few members of the Pulse family are poisonous, a great number are cultivated extensively as forage and food plants. The feeding value of the clover has already been mentioned. Others are the peas, beans, vetches, alfalfa, Japan clover and lentils. The pulse mentioned in the Bible in the Books of Daniel and Samuel were leguminous plants such as beans and lentils. Among those cultivated for ornament are the beautiful sweet pea, wistaria, lupines, Rose acacia and many others.

HOLSTEINS —more Fat!

Holsteins lead the world in production of butterfat—the largest factor in dairy profit. Eighty per cent of the cows which have produced 1000 lbs. or more of butterfat in a year are Holsteins.

Head of the Department of Dairy Husbandry Pennsylvania State College

Four Wattsburg C. T. A. Herds Exceed 300-Pound Mark in First Year

THE Wattsburg, Erie County, C. T. A. finished its first year May 1, 1927, with 23 whole-year members. In addition there were two members in the association only part of the year. There were 514 cows in the association during all or part of the year.

The results for the whole-year members are as follows:

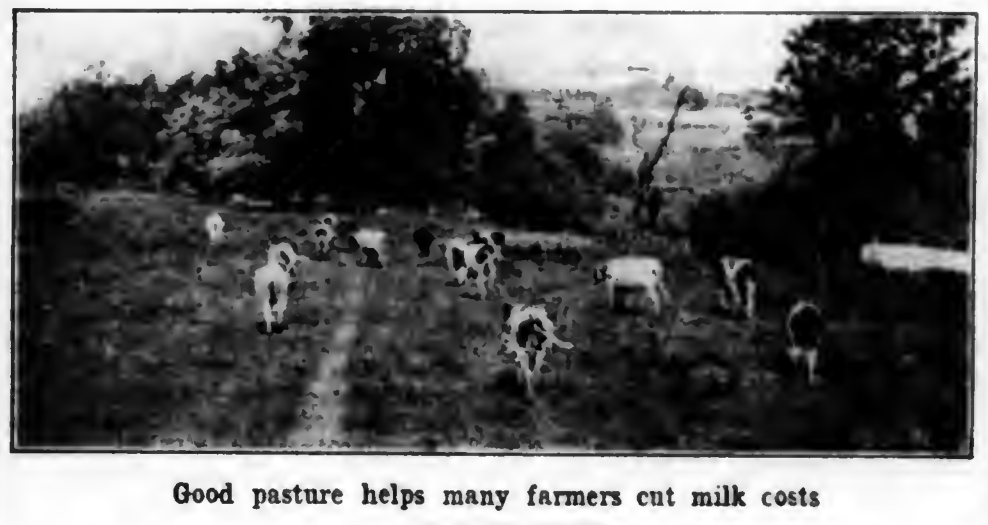
Average number of cows in the association	370.17
Avge. per cow: lbs. of milk	7024
Pounds of butterfat	255.1
Percentage of butterfat	3.6
Value of product	$155.64
Cost of pasture	9.83
Cost of roughage	29.09
Cost of grain	40.87
Total cost of feed	79.79
Value of product above feed cost *	75.85
Returns for $1.00 expended for feed	1.95

The following is a grouping of all cows producing over 300 pounds of butterfat: Above 400 lbs. butterfat, 4; between 300 and 400 lbs. butterfat, 71; total number of cows producing over 300 lbs. butterfat, 75.

Cow tester in charge, J. Taft Williams; County Agent, R. H. Engle; Assistant County Agent, O. C. Tritt; summary compiled by I. O. Sidelmann.

Four herds with an average of five or more cows exceeded an average production of 300 pounds of butterfat. A complete list of these herds follows:

Owner				
Fred Estes, Union City	13.33	G. D., G. H. & Mixed	$431	343.1
Karl Rockwood, Waterford	15.15	R. & G. H.	$254	312.2
Geo. McAllister, Union City	8.42	R. & G. H., G. D.	7825	305.3
Williams Bros., Union City	12.25	R. & G. H.	8606	303.8



Good pasture helps many farmers cut milk costs

Pasture Balances Dry Feed

PLENTY of pasture during the summer is the foundation for profitable pork production.

Pastures aid in balancing the ration and lower the cost of feeding. Pasture crops are rich in protein and body building materials and practically all are rich in mineral matter, such as lime and phosphoric acid which are needed in the development of bones. Pastures also aid greatly in keeping pigs in good condition, thus making them more resistant to disease and parasites.

The kind of pasture to use depends upon the crops that will do best in a community. Legumes, as a rule, are the most satisfactory. Alfalfa, clover, soy beans or rape is most commonly used. Crops not only aid in reducing the cost of pork production but increase the fertility of the land.

Alfalfa Produces Most Gain

An interesting report on the use of pasture in swine production has recently been issued by the Wisconsin Experiment Station. The report covers the work of five years. The crops used in this experiment were alfalfa and rape compared with dry lot feeding. The grain ration consisted of corn and tankage for all the lots. The pigs were started on the experiment weighing about 50 pounds per head and continued on feed until they reached market weight from 200 to 225 pounds.

The pigs on alfalfa pasture gained an average of 1.31 pounds per head per day, on rape pasture 1.30 pounds and the lot on no pasture 1.05 pounds. The grain required to produce 100 pounds of pork was as follows: alfalfa, 374 pounds of corn and 21 pounds of tankage, rape, 375 pounds of corn and 23 pounds of tankage, while the no pasture lot required 441 pounds of corn and 42 pounds of tankage.

The pasture in both cases saved about 66 pounds of corn and 20 pounds of tankage in producing 100 pounds of pork. There was not only the saving of grain but the pigs on pasture were ready for market at an earlier age.

The financial returns per acre of pasture with corn at 85 cents per bushel, tankage $69 per ton and pork selling at $9.90 per hundred pounds is interesting. Using these feed prices the returns from an acre of alfalfa would be $97.76, from an acre of rape $99.66. The same number of pigs without the pasture but kept in dry lot and fed corn and tankage would have returned $47.67 above feed cost.

The only additional expense involved in providing the pasture crop is the cost of seed, labor and fence. The cost of seed and labor are not expensive items and a good fence can be used for a number of years.—W. H. Tomhave.

This Silo Lasts a Lifetime

THE carefully selected heavy Northwest spruce and fir of which it is made, insures its durability. Double splines, sealed joints and adjustable doors make it absolutely air-tight and keep silage perfectly. Cheapest and easiest way to handle your corn crop and you get more milk from silage-fed cows. *The extension roof, an exclusive feature, reduces the cost per ton capacity.* A good investment and permanent improvement.

Write today for the name of our representative in your community and catalog; tanks, tubs, ensilage cutters, stanchions, etc.

Veterinary

Conducted by Dr. J. F. Shigley
Associate Professor of Veterinary Science, Pennsylvania State College, and Veterinarian in charge of College Livestock

Advice thru this department is free to our subscribers. Each communication should state history and symptoms of the case in full; also the name and address of writer. Initials only will be published. We invite readers to make use of this service. Clippings from the column when properly preserved and classified, make one of the most valuable medical symposiums a farmer-stockman can obtain.

COUGH DOES NOT YIELD TO TREATMENT.—My sow has been coughing for about four weeks. Seems like bronchial trouble but no medicine seems to reach it. She is nine years old. Can you tell me something that will cure her?—V. N. V. D., Horseheads, N. Y. You would do well to send this animal to the Veterinary Department at Cornell, or have one of the specialists examine her to determine the nature of the trouble. Such a condition would require an examination before treatment could be advised.

SOW FAILS TO BREED.—I have a young Poland sow that had one litter of pigs. Now she comes in heat but doesn't get with pig. Can you tell me what to do for her?—C. J. S., Hampton, Pa. This sow may have some abnormal condition of the reproductive organs that interferes with fertilization. Favorable results may follow the use of gland extracts used hypodermically. Try douching the vagina with a solution of one quart warm water to which has been added one teaspoonful each of common salt and baking soda. Douche during the early part of the heat period and breed after two or three hours.

NYMPHOMANIA.—I own a female horse which is in heat nearly all the time. What can I do to prevent this trouble?—H. F. B., Middletown, Pa. Have this mare examined by your local graduate veterinarian. This condition usually accompanies cysts in the ovary and may possibly be controlled by rupturing the cysts. It may be necessary to resort to an operation with removal of one or both ovaries in order to control the heat periods.

COW HAS LOST USE OF LEG.—I have a cow that when she came fresh she couldn't have her calf without help and the calf was dead. The cow has never gotten up by herself since. She has no use of left leg. It has been five weeks.—M. J. M., Volant, Pa. This condition occurs rather commonly, especially where force must be used in removing the calf. The nerves are involved and require some time to regenerate. Usually ten days to two weeks is sufficient but if the injury is severe, it may require several months to effect a complete recovery.

Onlooker—Surely, Mose, you don't expect to catch fish in that stream?

Mose—No sah, I don't expect to. I'se just showing my old woman I has no time to turn de wringer.—De Laval Monthly.

Our Readers' Classified Advertising Department

A market place to buy or sell at little expense. Over 100,000 farm families read Pennsylvania Farmer every week. Rate 6 cents a word each for one, two or three consecutive weekly insertions; 5 cents a word each for four or more insertions. Count each number and initial and send cash with order. Orders, discontinuances or changes of copy must reach us by Wednesday of week preceding date of issue. All advertisements set in uniform style, no display type or illustrations. Poultry advertising may run here, but if displayed or illustrations used must run in display advertising columns at commercial advertising rate (65 cents per agate line). Livestock advertising not accepted in this department. Minimum, ten words.

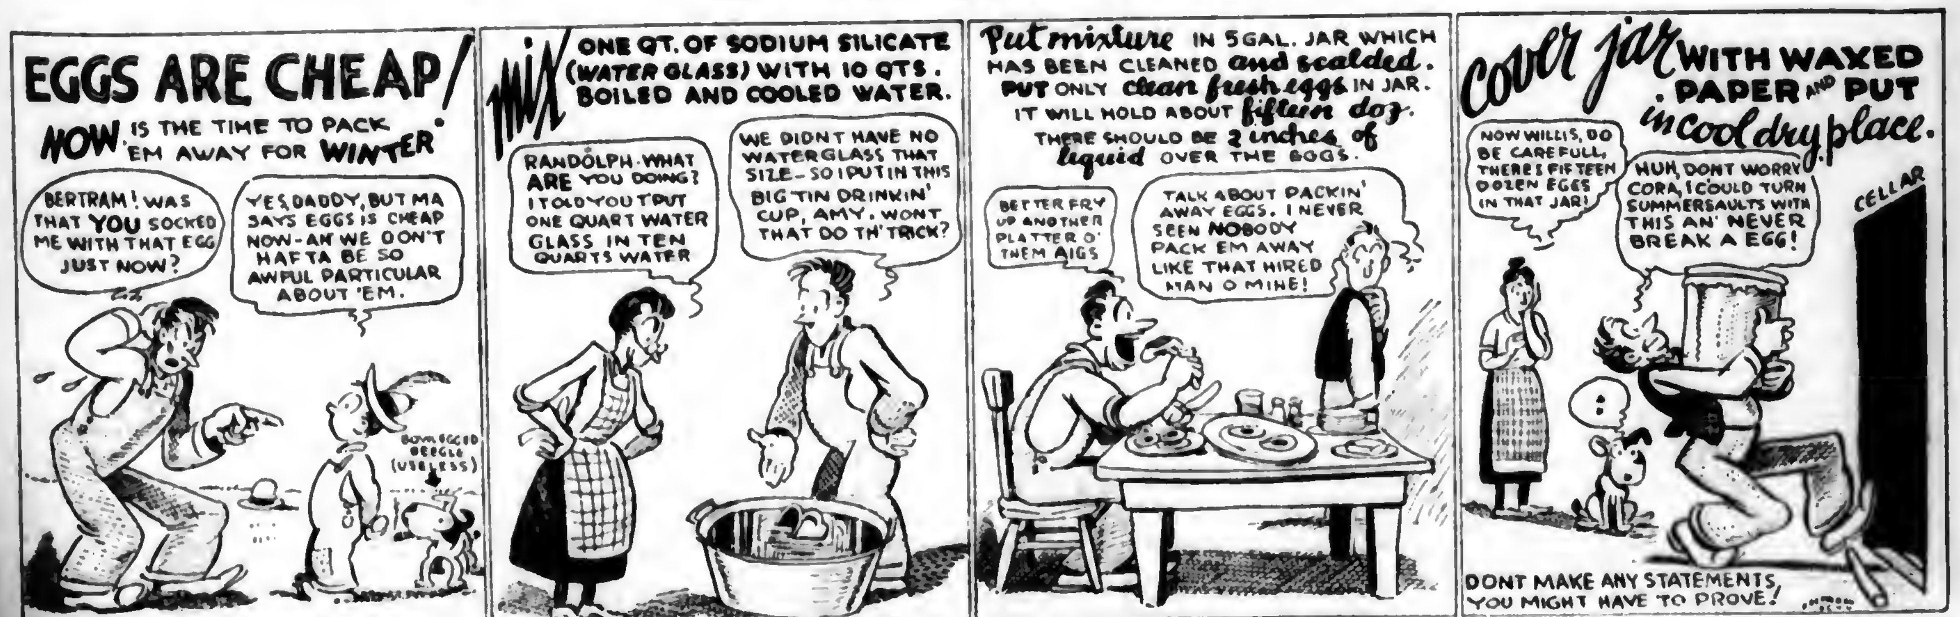
Herb the Handy Man Tells How—



EGGS ARE CHEAP!
NOW IS THE TIME TO PACK 'EM AWAY FOR WINTER
BERTRAM! WAS THAT YOU SOCKED ME WITH THAT EGG JUST NOW?
YES, DADDY, BUT MA SAYS EGGS IS CHEAP NOW—AN' WE DON'T HAFTA BE SO AWFUL PARTICULAR ABOUT 'EM.
BOW-EGGED BEEGLE (USELESS)
MIX ONE QT. OF SODIUM SILICATE (WATER GLASS) WITH 10 QTS. BOILED AND COOLED WATER.
RANDOLPH—WHAT ARE YOU DOING? I TOLD YOU T'PUT ONE QUART WATER GLASS IN TEN QUARTS WATER
WE DIDN'T HAVE NO WATERGLASS THAT SIZE—SO I PUT IN THIS BIG TIN DRINKIN' CUP, AMY. WON'T THAT DO TH' TRICK?
Put mixture IN 5 GAL. JAR WHICH HAS BEEN CLEANED and scalded. PUT ONLY clean fresh eggs IN JAR. IT WILL HOLD ABOUT fifteen doz. THERE SHOULD BE 2 inches of liquid OVER THE EGGS.
BETTER FRY UP ANOTHER PLATTER O' THEM AIGS
TALK ABOUT PACKIN' AWAY EGGS. I NEVER SEEN NOBODY PACK EM AWAY LIKE THAT HIRED MAN O MINE!
Cover jar WITH WAXED PAPER AND PUT in cool dry place.
NOW WILLIS, DO BE CAREFULL, THERE'S FIFTEEN DOZEN EGGS IN THAT JAR!
HUH, DONT WORRY CORA, I COULD TURN SUMMERSAULTS WITH THIS AN' NEVER BREAK A EGG!
CELLAR
DONT MAKE ANY STATEMENTS YOU MIGHT HAVE TO PROVE!

Mobiloil flies with Lindbergh

3700-mile flight gives lubrication its greatest test in history

Capt. Lindbergh has cabled us as follows:

> "Vacuum Oil Company
> New York
>
> **In my flight from New York to Paris my engine was lubricated with Gargoyle Mobiloil "B" and I am happy to say that it gave me every satisfaction. My engine functioned perfectly.**
>
> Charles A. Lindbergh"

NEVER before have the skill and daring of a single man gripped the world as did Captain Charles Lindbergh in his flight from New York to Paris.

In 33½ hours he flew 3700 miles—alone in a single-motored plane — through fair weather, storm and sleet—straight to his goal and to fame.

Success!

Gargoyle Mobiloil "B" lubricated the engine of Captain Lindbergh's plane, "The Spirit of St. Louis" And what a test of lubrication! That single engine must function perfectly. The slightest mishap meant instant danger, perhaps the end of the flight in the waters of the Atlantic.

The engine did function perfectly. The flight was a success.

Thus another great adventure is written into the vivid history of American aviation in which Gargoyle Mobiloil has played its part.

When Commander Byrd flew to the North Pole—he used Mobiloil "B."

When the U. S. Army fliers flew around the World in 1924—they used Mobiloil "B."

When Lieutenant Maughan flew across the United States "from dawn-to-dusk"—he used Mobiloil "B."

When Capt. Lindbergh flew from San Diego to New York—he used Mobiloil "B."

And now when Capt. Lindbergh flies from New York to Paris he uses Mobiloil "B."

In a press interview shortly after his arrival in Paris, Lindbergh said, "We had the worst possible weather for over 1000 miles over the open sea. I cannot say too much for the way the ship and the motor stood up under all this punishment."

Science wins!

The Gargoyle Mobiloil Engineers are
stantly and directly associated with
nautic developments just as they have
with automobile developments from the
ginning. Their Chart of Automobile Re
mendations is approved by 609 manufa
ers of automobiles, farm tractors,
trucks and other automotive equipment.

The Mobiloil "B" used by Lindbergh
not a special oil. It was the same Mob
"B" which is used today by thousands
farmers in their tractors and trucks. It
the same Mobiloil "B" which, with
other grades of Mobiloil, is for sale by
dealers everywhere.

Put this scientific margin of safety into
lubrication of your own motor. You
find Mobiloil the most economical as well
the safest oil to use.
